What are Infrastructure Assets?

Infrastructure assets are the networks and systems that provide essential services, facilitate economic activity and enable the movement or storage of goods, water, energy, data and people

Traditional Infrastructure

Upgrades on roads, rails, transport network (e.g., ports, waterways and airports); modernizing public transit; build, preserve and retrofit civic and commercial real estate; upgrading aging water infrastructure including water treatment plants, pipes, sewers, water sanitation, improving access to clean water.

Renewable Infrastructure

Investments to accelerate the adoption of renewables in primary energy supply to meet Paris agreement commitments: Upgrading the electric grid, building electric vehicle charging stations, supporting sustainable farming and circular economy initiatives, decarbonizing the energy sector.

Digital Infrastructure

Investments in digitalization initiatives (cloud, 5G, data centers), expansion of high-speed broadband, funding of scientific research, granting or improving digital access to underserved segments of the population.

Key characteristics of infrastructure assets

Key characteristics	Summary
'Real' Asset Class	• Infrastructure represents a tangible asset – i.e., a combination of land and structures that constitutes real property. Real property is expected to almost always retain a residual value, which is particularly attractive during periods of distress
Essential Services	• Given the essential nature of Infrastructure services, user demand tends to be relatively inelastic. Therefore, they tend to exhibit a lower correlation to the economic cycle compared with other sectors
High Barriers of Entry	• Infrastructure requires a high level of initial capital investment, which acts as a significant impediment to potential competitors entering the market. Assets can enjoy monopolistic or quasi-monopolistic market positioning
High Regulation	• Infrastructure assets are usually essential services providers which are important in the function of society and economy. Therefore, governments tends to exercise strict regulation over them. While regulations can vary, they usually make cash flows more stable
Diversified end-user base	• The counterparties to infrastructure assets are generally a widely diversified group of end users, which helps stabilize cash flows
Cash flow predictability	• Regulation provides long-term revenue visibility to infrastructure investments
Inflation hedge	• Depending on the type of infrastructure asset, price inflation can sometimes be passed on to the end consumer. Most regulatory frameworks allow regulated assets to use inflation-indexed user tariffs

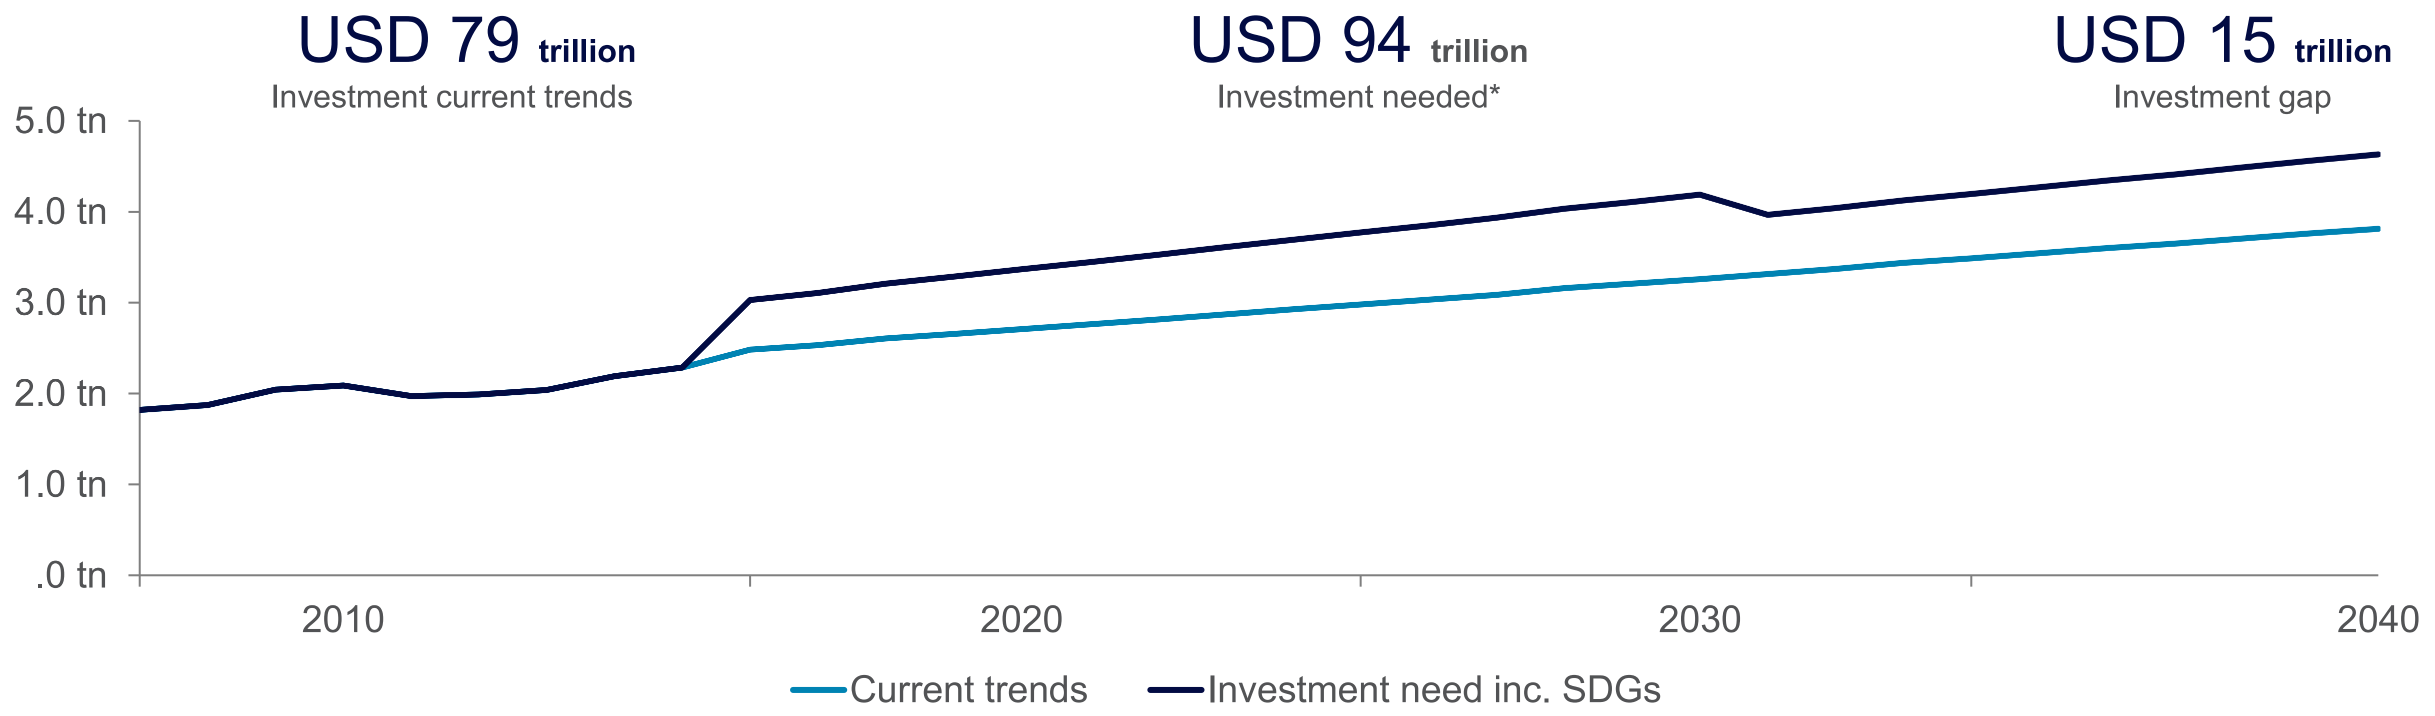
The Infrastructure “super-cycle”

Post-COVID, major governments are investing heavily in infrastructure assets to achieve supply chain resilience, digital independence and environmental targets

Global infrastructure investment spend has trailed behind actual needs



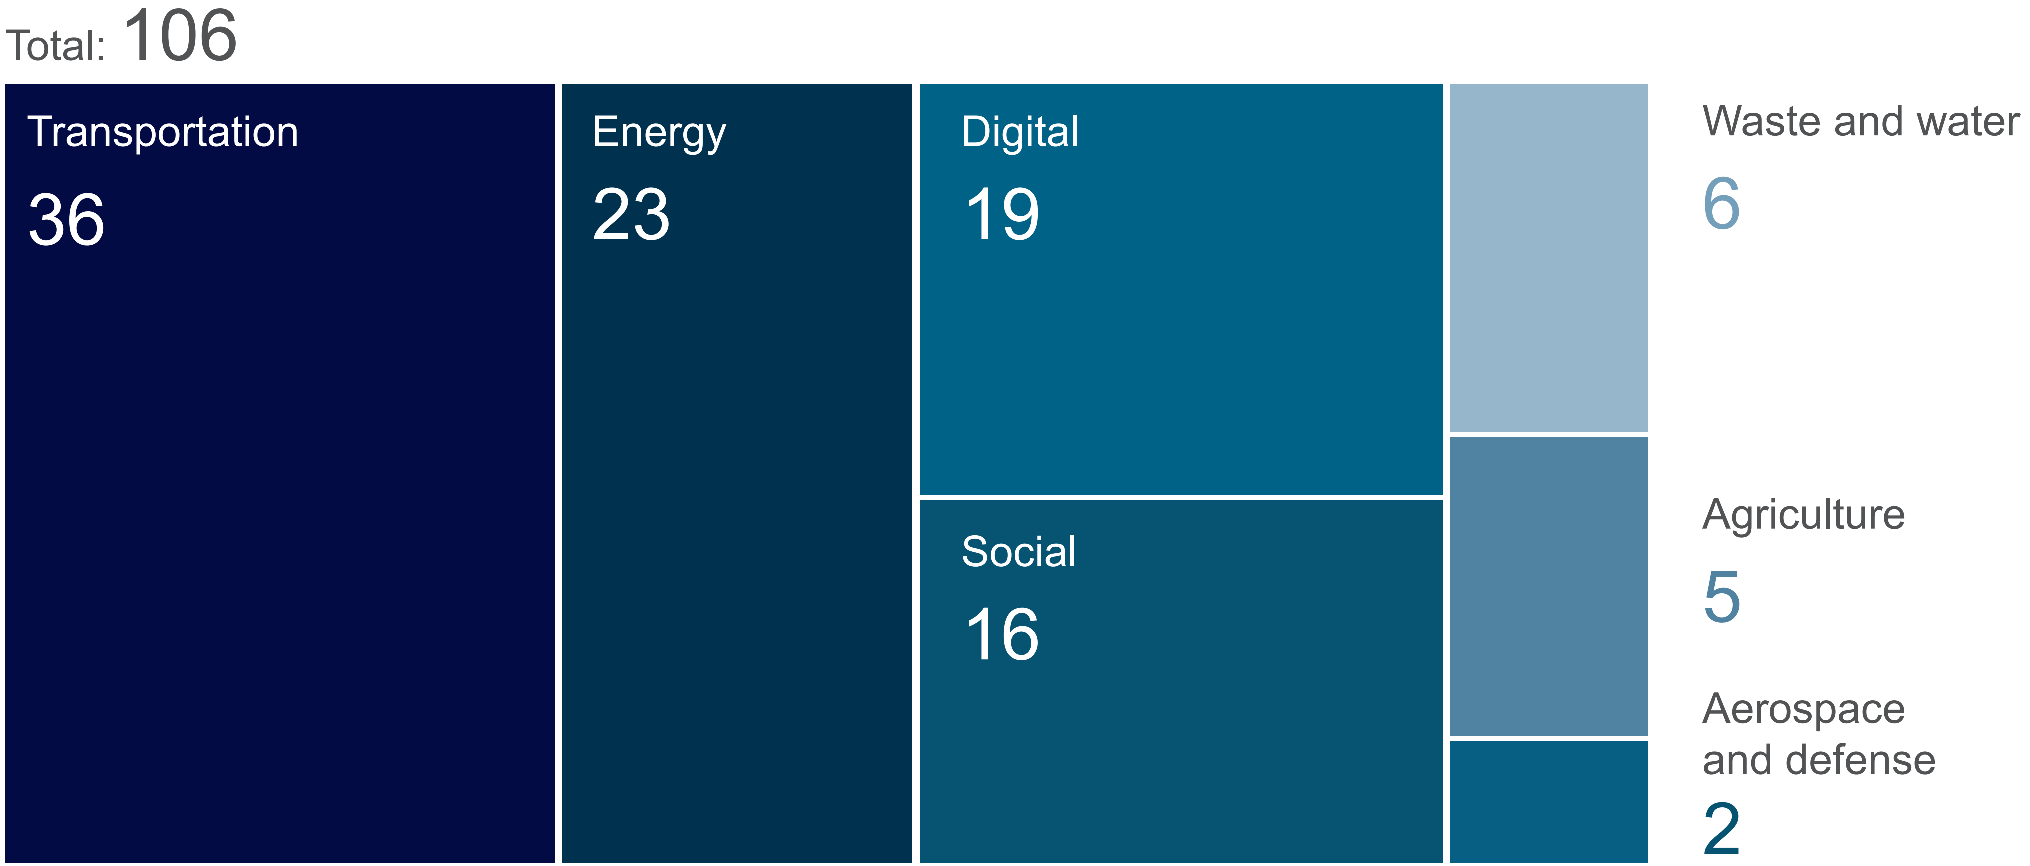
Source: Global Infrastructure Outlook, Standard Chartered
*Includes the additional investment needed for countries that have not yet met the SDGs
Note: values refer to estimated investment spending and needs until 2040
SDG refer to United Nations Sustainable Development Goals

The definition of infrastructure is evolving to meet future needs

From traditional, asset-heavy sectors…	… to inclusion of services, technology, and distributed systems
Asset-heavy Large; physical, high-capex-assets	**Tech-enabled** Digital, software-driven infrastructure as a service
Highly regulated Government-owned and monopoly models	**Market-driven** Private-sector competition and digital platforms
Linear and centralized Centralized grids, fixed networks	**Decentralized and modular** Distributed, flexible, and demand driven
Capex-intensive Heavy investments upfront	**Opex and services** Pay-as-you-go, cloud-based subscription models
Built on long-established technologies Fossil fuels, resource-heavy	**Built on scaling and disruptive technologies** Low-carbon, circular economy, sustainability driven

Cumulative infrastructure investment is expected to reach as high as $106 trillion by 2040

Total infrastructure investment projected through 2040, by sector, $ trillion



Source: Food and Agriculture Organization; Global Infrastructure Hub; International Energy Agency; International Monetary Fund; Organisation for Economic Co-operation and Development; Preqin; United Nations; World Bank; World Economic Forum; Mckinsey
Note: Figures do not sum, because of rounding

Asia could receive two-thirds of the total infrastructure investment through 2040

Total infrastructure investment projected through 2040, by region, $ trillion

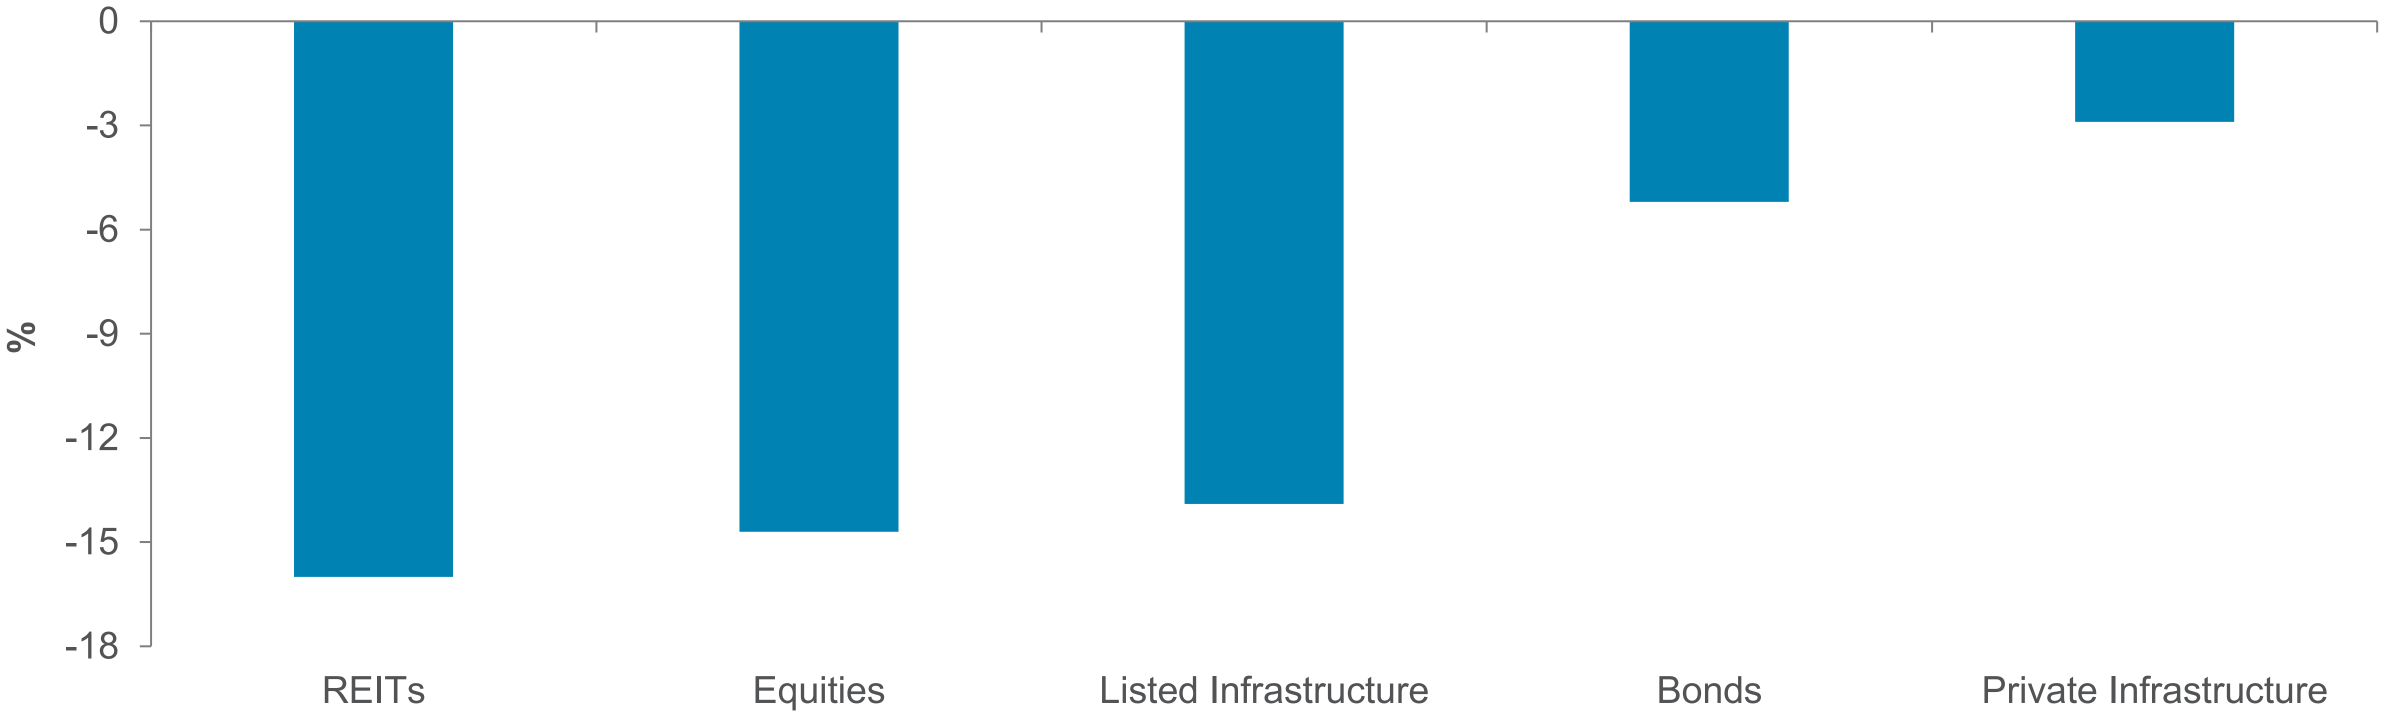
Portfolio Benefits of Private Infrastructure

Private infrastructure assets have demonstrated resilient returns during drawdowns

History suggests that infrastructure assets tend to perform relatively well compared to traditional assets during worst performing quarters for equity markets

Average return by asset class during 10 worst quarters for equity markets



Source: Allianz Research, Standard Chartered

Private infrastructure is often less correlated to traditional asset classes

It also has relatively lower volatility compared to equities and REITs, given its regular cash flow which can mitigate downside price volatility

10Y Risk/Return matrix across Asset Class

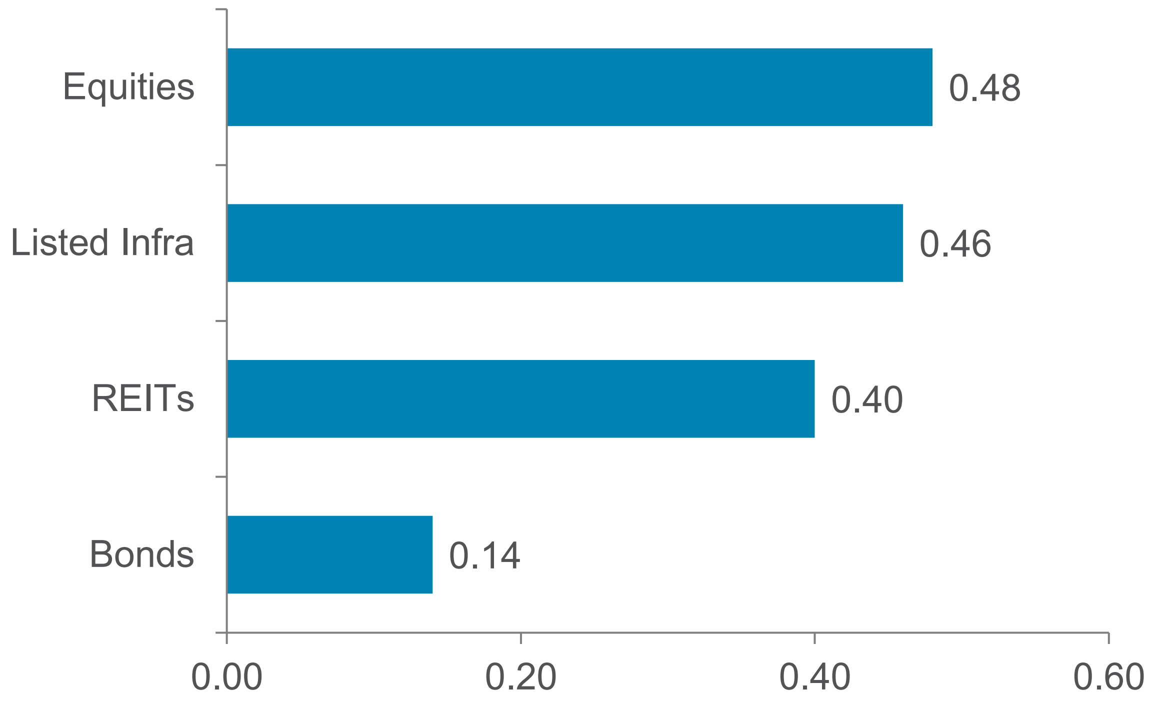
Data as of September 2025

10Y Correlation with Private Infrastructure



Source: Allianz Research, Standard Chartered Bank
Data as of 2024

Adding Private infrastructure could improve risk-adjusted returns in a portfolio

An allocation towards Private Infrastructure, which is a less volatile asset, can improve a portfolio's risk-adjusted returns

Performance of a portfolio with a private infrastructure allocation vs a Traditional 60/40 Portfolio

	60/40 Portfolio	**Portfolio with Private Infrastructure Allocation**
Historical 10Y Ann. Return	8.7%	9.0%
Historical Volatility	11.1%	10.3%
Sharpe Ratio	0.47	0.54

Source: StashAway, Standard Chartered
Data as of September 2024

Infrastructure assets are generally resilient through an economic cycle

Private Infrastructure assets can help hedge against inflation as cash flows are typically inflation-linked, which is a valuable attribute during periods of high inflation

1

Income

Given their essential nature, infrastructure investments can generate relatively stable and resilient cash-flows in a range of market environments

2

Downside Protection

The essential nature of the business allows it to remain resilient through an economic cycle, usually limiting drawdowns at least relative to public market assets

3

Stability of Cashflow

Infrastructure's contractual business nature helps provide investors with long-term visibility into cash flows with usually less exposure to price volatility and volume risk

4

Inflation Protection

Private Infrastructure cash flow are usually indexed to inflation. There are also often pass-through clauses for higher costs given the essential nature of their underlying business

5

Diversification

Private Infrastructure has a relatively low volatility relative to, and correlation with, traditional asset classes

6

Sustainability

The global shift towards net-zero suggests that investment into supporting infrastructure will increase as countries push to overhaul their existing carbon-based infrastructure

Source: Standard Chartered

Key Drivers of Infrastructure spending

The 3Ds of Infrastructure Opportunities

The infrastructure needs to enable long-term trends, including the investment to meet the staggering growth in data consumption, the shift away from traditional fossil fuels and the acceleration toward e-commerce, require a tremendous amount of capital

The 3Ds

Digitalization

Data is the world's fastest-growing commodity. The total amount of data generated globally doubles about every 18 months. All this data will need to be transported, processed and stored, requiring additional infrastructure. We believe the resulting investment opportunities will be wide-ranging. These include the need to upgrade networks from copper to fiber, to support faster speeds, more bandwidth and lower latency

Decarbonization

Amid the global urgency to decarbonize, many governments and companies are setting the goal of net-zero emissions by 2050. Along with the cost competitiveness of renewable energy generation, we believe these reduction targets will lead to unprecedented investment

Deglobalization

Deglobalization is the onshoring of critical industries following global supply chain disruptions and the growing importance of energy security. Recent geopolitical events in Europe have highlighted the importance of energy security

Source: Brookfield, Standard Chartered

Greater 5G adoption to drive spending on digital infrastructure

The construction of higher speed, lower latency 5G networks is expected to open a host of applications that previously were not viable. These applications are likely to drive Digital Infrastructure spending

5G Development Stages

2019+	2021+	2023+	2030s
Enhanced Mobile Broadband	Ultra-reliable and low latency communications	Massive machine type communications	New unknown phases to be discovered

- Enhanced Wireless Services
- Precision Virtual Control
- Connected Devices
- Autonomous Driving
- 'Smart' everything
- AR/VR
- Real-time Data Analytics
- Fixed Wireless Services
- Cloud-based Gaming

5G Deployment Drivers

- Mobile broadband
- New business cases with 5G stand-alone
- Extended deployment cycle
- Cost/Power consumption

Takeaways: Decarbonization, Deglobalization and Digitalization to support spending on infrastructure assets

Key Drivers

Digitalization

Governments have earmarked digital infrastructure as a key focus area in their stimulus plans. Digital infrastructure is the foundation on which digital economic activities, technological applications and significant productivity gains can be built on.

Decarbonization

A convergence of interest in climate change from governments, corporates and individuals is accelerating the transition to a ‘net zero’ economy, of which the power and transport sector have a key role to play.

Deglobalization

Recent geopolitical events have highlighted the importance of onshoring critical industries.
The pandemic has also revealed the inefficiencies and un-reliabilities in the existing supply chain infrastructure.

Key Risks

Key Risks

Risks		Summary
01	Political and Regulatory Risk	• Infrastructure assets are essential services that ensures the functioning of society and the modern economy; hence governments tend to maintain certain control or regulation over them • The level of exposure to political developments as well as the tightness of regulation differs from one country or sector to another and can have a significant impact on investment returns
02	Construction Risk	• In greenfield projects, construction risk are involved. Such risk includes project overruns and delays. These risks can be common for complex projects such as bridges or energy plants. Any project overruns or delays will usually cause delayed revenues and reduced returns
03	Operational Risk	• When an infrastructure asset is operating, operational risks will be involved, including performance or maintenance risks. Performance risk can include falling short of volume or price objectives or increased costs of doing business. Maintenance risk includes unplanned maintenance costs that can reduce operating cash flow levels. Exposure to operational risk varies by asset type • Regulated assets like electricity grids are typically more protected against certain risks through regulatory formulas or cost pass through to the customer, while unregulated assets are usually more exposed
04	Financial Risk	• Depending on the level of leverage and the debt structure, infrastructure assets can be exposed to interest rate volatility or refinancing risk. If not hedged, interest costs may increase, reducing operating cash flow levels

Sustainable Investments

Any ESG data used or referred to has been provided by Morningstar, Sustainalytics, MSCI or Bloomberg. Refer to 1) Morningstar website under Sustainable Investing, 2) Sustainalytics website under ESG Risk Ratings, 3) MCSI website under ESG Business Involvement Screening Research and 4) Bloomberg green, social & sustainability bonds guide for more information. The ESG data is as at the date of publication based on data provided, is for informational purpose only and is not warranted to be complete, timely, accurate or suitable for a particular purpose, and it may be subject to change. Sustainable Investments (SI): This refers to funds that have been classified as ‘ESG Intentional Investments - Overall’ by Morningstar. SI funds have explicitly stated in their prospectus and regulatory filings that they either incorporate ESG factors into the investment process or have a thematic focus on the environment, gender diversity, low carbon, renewable energy, water or community development. For equity, it refers to shares/stocks issued by companies with Sustainalytics ESG Risk Rating of Low/Negligible. For bonds, it refers to debt instruments issued by issuers with Sustainalytics ESG Risk Rating of Low/Negligible, and/or those being certified green, social, sustainable bonds by Bloomberg. For structured products, it refers to products that are issued by any issuer who has a Sustainable Finance framework that aligns with Standard Chartered’s Green and Sustainable Product Framework, with underlying assets that are part of the Sustainable Investment universe or separately approved by Standard Chartered’s Sustainable Finance Governance Committee. Sustainalytics ESG risk ratings shown are factual and are not an indicator that the product is classified or marketed as “green”, “sustainable” or similar under any particular classification system or framework.

Foreword

Dear Reader,

Welcome to our white paper on Investing in “Global Tech”, where we explore the transformative trends shaping the global investment landscape over the coming years – and decades. We keep our spotlight throughout on the enduring appeal, and necessary evolution of **Global Tech**, which we define as tech and tech-enabled business models as represented by a growth benchmark index. We believe the theme is a core pillar of global asset allocation, representing around 20% of our CIO Foundation Balanced portfolio spanning tech and tech-enabled sectors expanding at an above average pace.

We are living in an era of extraordinary imagination. Rapid advances in generative AI have moved beyond being a purely structural theme to become a pervasive force – much as internet-enabled devices did in prior decades. While early signs of AI-driven disruption became evident as early as the first quarter of 2026, we remain firmly in the “glass half full” camp. In our view, AI presents far more opportunities than risks. The world has found a new growth engine – one capable of unlocking unprecedented investment opportunities – and this reinforces **Global Tech** as one of the key pillars in driving long-term portfolio returns.

Our back-testing shows that the Global Tech theme as represented by a growth benchmark index has historically been rewarding for investors, delivering consistent outperformance versus the other style, value. We see no reason for this to change. As innovation accelerates and competitive advantages widen, markets are likely to continue rewarding business models with superior and durable growth prospects.

Capturing these opportunities, however, requires a disciplined and systematic approach. Investing in tech and tech-enabled business models today goes beyond passive exposure; it demands active management to navigate market volatility, business cycles, and disruption risks. We address these dynamics through the **SCB framework to invest in Global Tech**, which identifies three broad opportunity sets and explicitly right-sizes exposure across them:

- **Structural opportunities (S):** Secular business models offering long-term visibility with strong compounding potential.
- **Cyclical opportunities (C):** Tactical opportunities arising from valuation mismatches and demand-supply imbalances as industries and regions embrace innovation at different speeds.
- **Binary opportunities (B):** Select turnaround as well as moonshot opportunities linked to next frontier technologies that offer optionality through an asymmetric risk-reward profile.

The future is arriving faster than ever. It is imperative that investors and leaders work hand in hand to embrace both the opportunities and challenges of this new era to forge a resilient and prosperous path forward. We hope this report provides the insights and framework needed to navigate what we believe is a rewarding – and defining – Global Tech investment landscape.

Samir Subberwal
Global Head, Wealth Solutions, Retail Products, Data & Analytics

The case to invest in Global Tech

Our Global Tech investment theme is firmly anchored in a growth style approach, where we place greater emphasis on tech and tech-enabled business models that can offer structural earnings growth prospects.

This does not imply that valuation is irrelevant for growth companies; rather, on a relative basis, earnings growth is the dominant driver of long-term market returns.

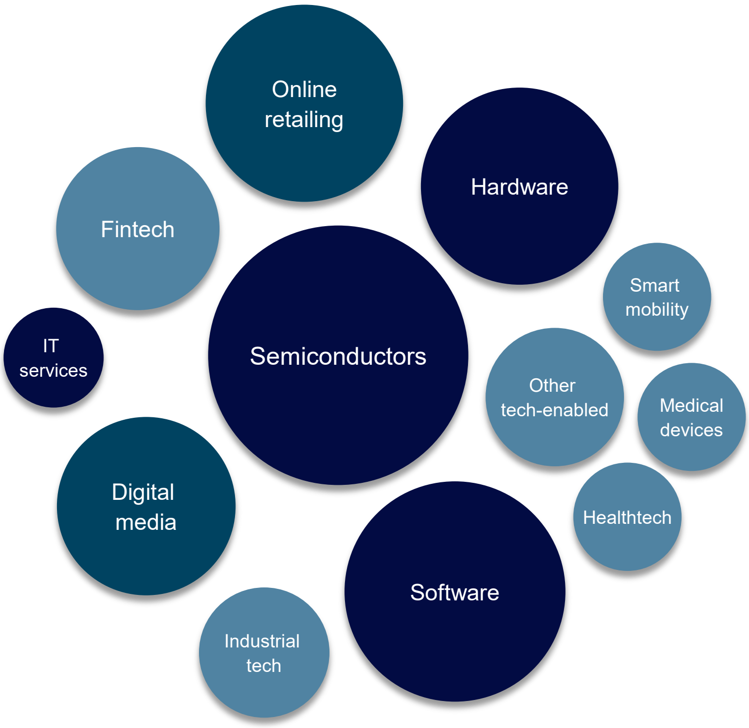
For us, Global Tech includes both tech and tech-enabled business models, which accounts for roughly 40% of global equities or put differently from an asset allocation point of view, the theme represents around 20% of our CIO Foundation Balanced portfolio. Relative to the other investment style—global value—our Global Tech theme is focused on growth companies operating in sectors that typically trade at valuation premiums. These premiums, in our view, are justified by above average and more durable growth prospects.

Companies within our Global Tech universe are predominantly found in tech and tech-enabled sectors such as IT, communication services, consumer discretionary, and industries such as fintech, healthtech etc. coupled with other innovation driven segments spanning both the new and old economy. A clear example is the renewed growth visibility in traditionally cyclical sectors such as industrials and utilities, supported by unprecedented AI related capital expenditure. Put simply, our Global Tech theme focuses on companies with tech and tech-enabled business models that can offer superior and sustainable growth trajectories.

Fig. 1

What is included in Global Tech?

Tech and Tech-enabled industries are spread across sectors with the size of bubble representing addressable market capitalisation in our view



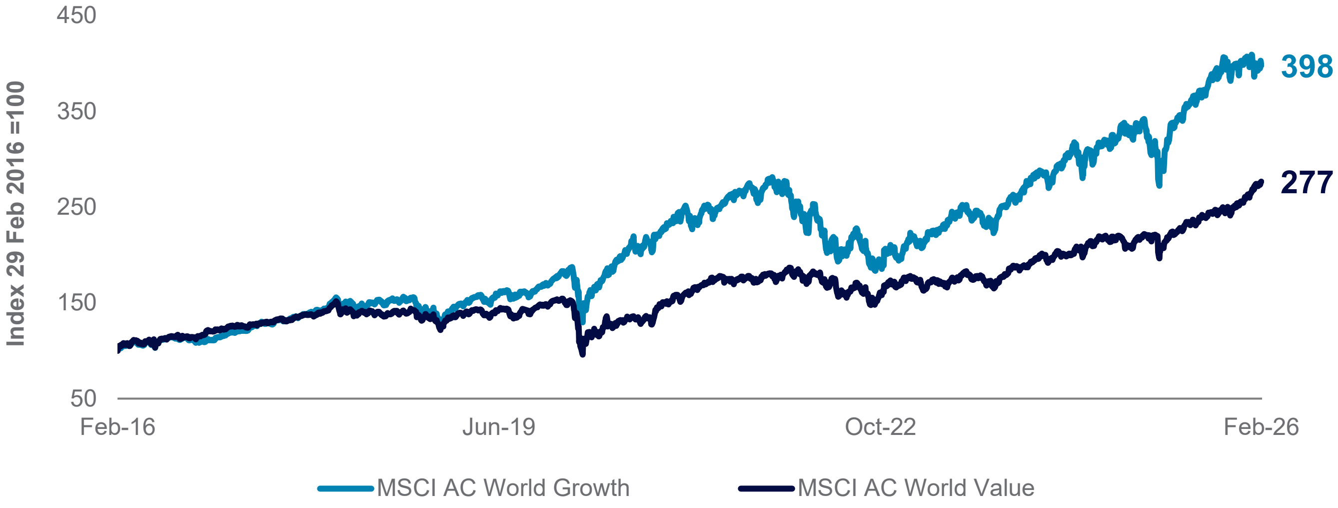
Source:Standard Chartered

From a performance perspective, Global Tech theme as represented by the growth benchmark index has delivered compelling results. Over the past decade (2016–2025), the theme generated average annual returns of 14.8%, compared with 10.7% for the value style (both based on MSCI indices). This outperformance has been driven primarily by superior earnings growth, typically in the low-to-mid-teens, while valuation premiums have remained broadly intact over the period.

Fig. 2

Despite premium valuations, Global Tech has outperformed global value over the past decade

MSCI AC World Growth vs Value index (rebased to 100, starting from close of 29 Feb 2016)



Source: FactSet, Bloomberg, Standard Chartered

Looking ahead, we believe the investment backdrop for Global Tech remains constructive. We expect strong revenue growth and resilient margin profiles to continue supporting superior earnings growth. While AI (artificial intelligence) will play a central role in expanding addressable markets for leading technology companies, innovation is far from confined to a single sector like IT. Areas such as consumer discretionary, digital media healthcare and fintech, that are represented across sectors, continue to see rapid product innovation and adoption, underpinning broad-based revenue momentum across our Global Tech universe. At the same time, steady margin trends – supported by pricing power, automation, and operational efficiencies – should sustain 10-15% earnings growth p.a. over the foreseeable future. Although near-term indicators capture only part of this picture, consensus earnings forecasts for 2026 and 2027 clearly show Global Tech-oriented sectors in the driver's seat.

Fig. 3

Superior earnings growth will likely support the performance of Global Tech

Earnings growth forecast for global sectors in 2026 and 2027

Source: FactSet, Bloomberg, Standard Chartered

While Global Tech continues to trade at a valuation premium relative to value, we believe this premium is warranted. On average, Global Tech offers 10-15% earnings growth p.a., compared with 6-9% earnings growth p.a. for global value counterparts – a differential that supports the valuation gap.

Against this backdrop, we see a favourable and durable backdrop for the Global Tech theme in the years ahead. Importantly, however, we believe the strongest case for outperformance lies in an active investment approach, rather than passive exposure. The dynamic and disruptive nature of once in a generation forces such as AI is likely to amplify market volatility, shorten business cycles, and drive disruption. Active management is therefore essential to navigate these shifts effectively – a topic we explore further in the next chapter.

Why active management in Global Tech is more rewarding?

While we maintain our conviction in the structural outperformance of Global Tech over value as a long-term theme, we see a more compelling risk-reward profile in adopting an active approach over passive investing.

This stems from the inherently dynamic nature of tech investing, where business models must continuously adapt to rapid innovation cycles. As the saying goes, “the only constant is change.” In this environment, actively rebalancing portfolios to reflect evolving fundamentals can help investors manage significant drawdowns while positioning for emerging opportunities at key inflection points.

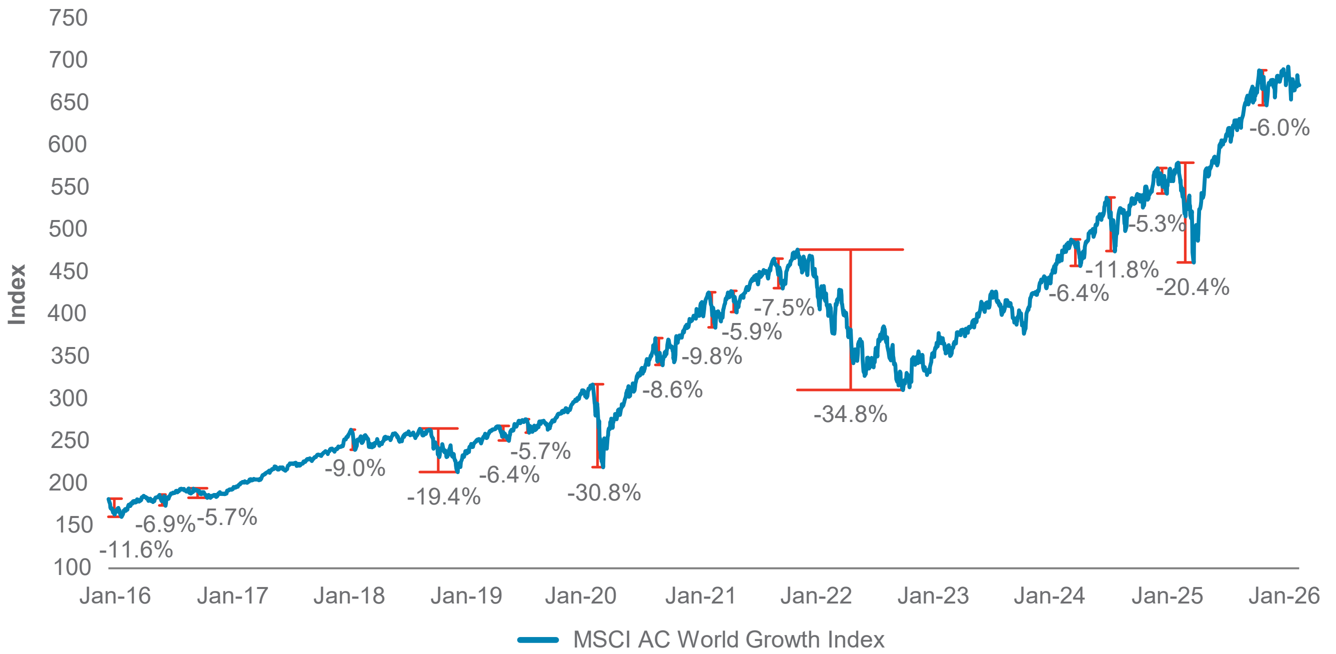
Three key developments reinforce our case for active management in Global Tech:

Let’s begin with market volatility. Despite delivering above-average returns over the past decade, the Global Tech theme has experienced frequent drawdowns. This is not surprising given the innovative nature of its constituents, which are often exposed to idiosyncratic risks such as regulatory shifts, product cycles, leadership changes, or supply chain disruptions. Fig. 4, shows the number of 5% and above drawdowns for Global Tech, as represented by growth benchmark index over the past decade.

Fig. 4

Global Tech theme experienced multiple drawdowns over the past decade

Drawdowns of at least 5% for MSCI AC World Growth Index between 2016-2025



Source: FactSet, Bloomberg, Standard Chartered

However, these drawdowns have historically presented attractive entry points and not reasons to panic. As shown in Fig. 5, the Global Tech as represented by growth benchmark index has consistently rebounded strongly over the subsequent 6 months after frequent drawdowns. This underscores the value of an active approach – one that distinguishes between short-term noise and long-term fundamentals, enabling investors to capitalise on volatility rather than be derailed by it.

Fig. 5

Global Tech stocks rebounded historically after a sharp decline

6-month rebound in MSCI AC World Growth Index after frequent drawdowns over the past decade

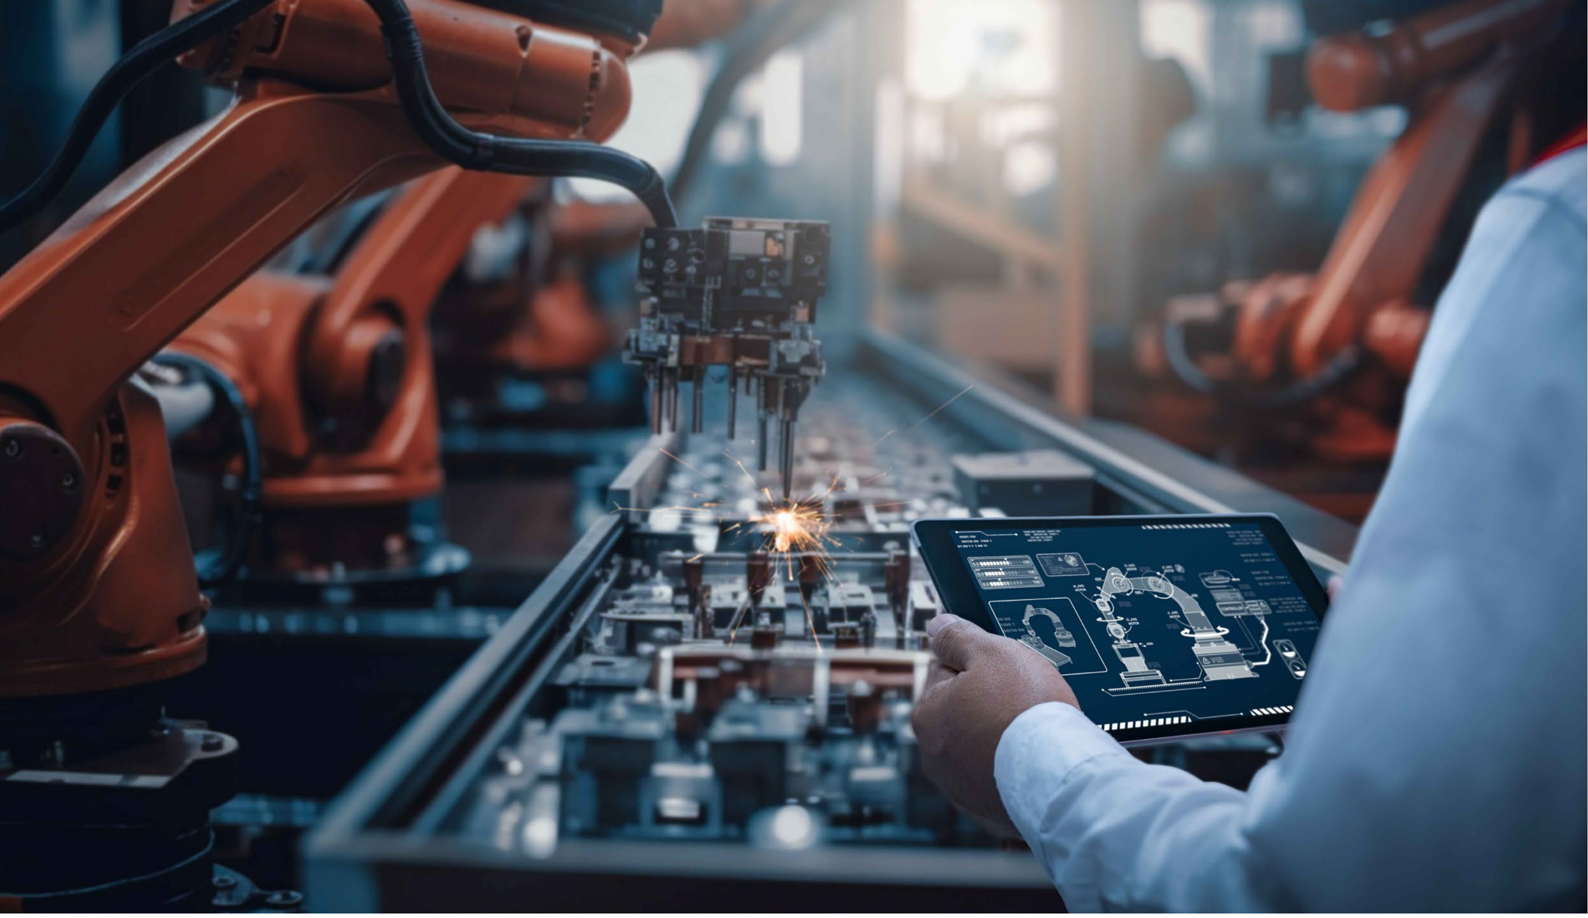
29 Oct 2025	21 Nov 2025	23	–
		Average	**19.8%**

Source: FactSet, Bloomberg, Standard Chartered

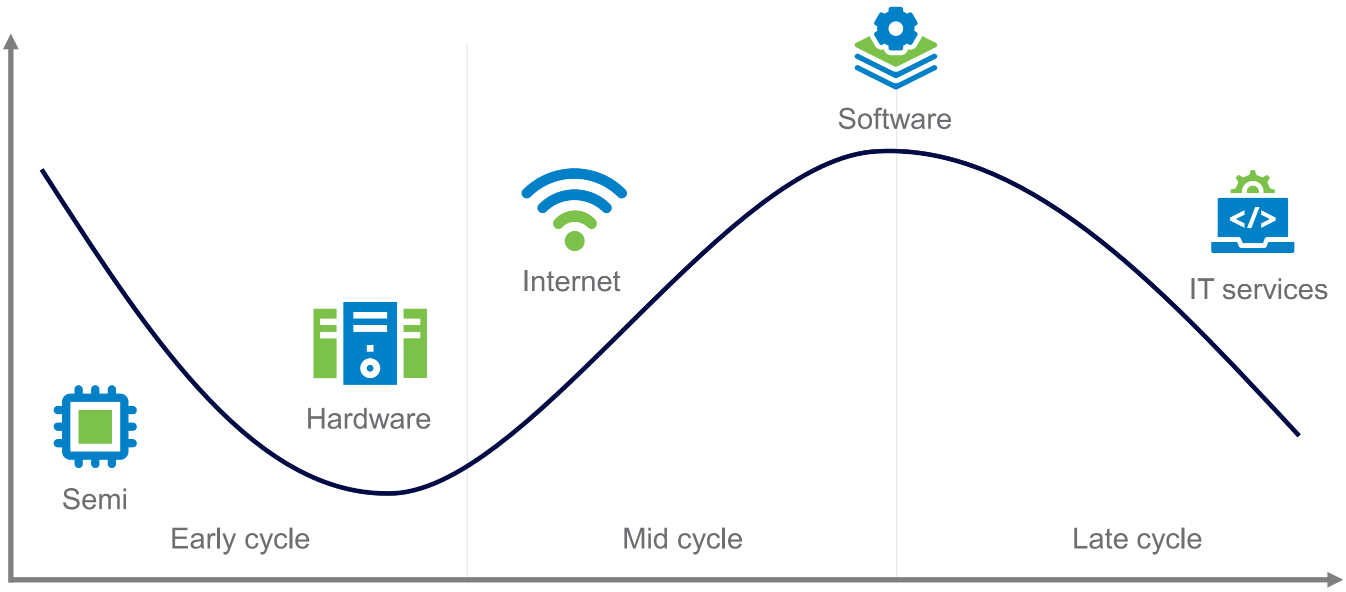


The second pillar of our argument is the importance of navigating business cycles within Global Tech's diverse segments. For instance, within the tech sector, five key industries – semiconductors, hardware, internet, software, and IT services – tend to perform differently depending on the stage of the business cycle. Our "Tech Industry Playbook" (see Fig. 6) shows that semiconductors and hardware typically lead in early-cycle recoveries, followed by internet and software in the mid-cycle, and IT services in the late cycle.

Fig. 6

Tech Industry Playbook to navigate across the business cycle

Positioning across five industries based on the business cycle is key to generate alpha



Source: Standard Chartered

Against this backdrop, active approaches that can correctly identify the business cycle and apply industry playbooks—by overweighting or underweighting specific sub-segments—can help generate alpha. For instance, the Tech industry playbook is also working effectively even during the ongoing AI cycle. With AI still in its early innings, semiconductors and internet companies have outperformed, while software and IT services – typically mid-to-late cycle beneficiaries – have lagged. We believe playbooks such as these remain valuable tools for identifying inflection points and adjusting allocations accordingly. It is also worth noting that tech sub-cycles vary in duration, requiring nimble positioning.

Lastly, active management is essential in navigating disruption risks – an inherent feature of the Global Tech theme. As discussed earlier, innovation is both a driver and a disruptor for the theme. Understanding evolving business models and proactively managing disruption risk can help investors stay focused and avoid emotionally driven decisions. For example, Fig. 7 compares the 10-year performance of retail companies, Amazon and Walmart. While both companies delivered largely similar returns over the full period, the journey was markedly different. In the first half, online retailer Amazon's dominance in e-commerce weighed heavily on traditional retailers like Walmart. However, as incumbents adapted and embraced digital transformation, they regained investor confidence and narrowed the performance gap eventually. Understanding at which stage of the disruption cycle and active adjustment of portfolios is also key to generate alpha within the Global Tech theme.

Fig. 7

Case study: Amazon and Walmart share prices evolved at different paces

Amazon and Walmart (rebased to 100, starting from close of 29 Feb 16)

Source: Bloomberg, Standard Chartered

To summarise, we believe that active management is not just preferable but essential when investing in the dynamic Global Tech theme. By actively managing volatility, navigating sector and industry cycles, and managing disruption risks, investors can enhance returns and mitigate downside risks more effectively than through a passive approach.

The SCB framework to invest in Global Tech

With active management chosen as the preferred approach to investing in Global Tech, how should investors select the right business models within a portfolio context?

This is a fair question, given that most companies in the Global Tech universe typically report above average earnings growth, so there needs to be some form of differentiation. As a result, it becomes imperative not only to segment companies into distinct buckets, but also to right-size exposures from a portfolio construction perspective.

To help investors navigate this challenge, we introduce the **SCB framework** for investing in Global Tech. Under this framework, Global Tech companies are categorised into three buckets: **Structural opportunities (S), Cyclical opportunities (C) and Binary opportunities (B).**

Fig. 8

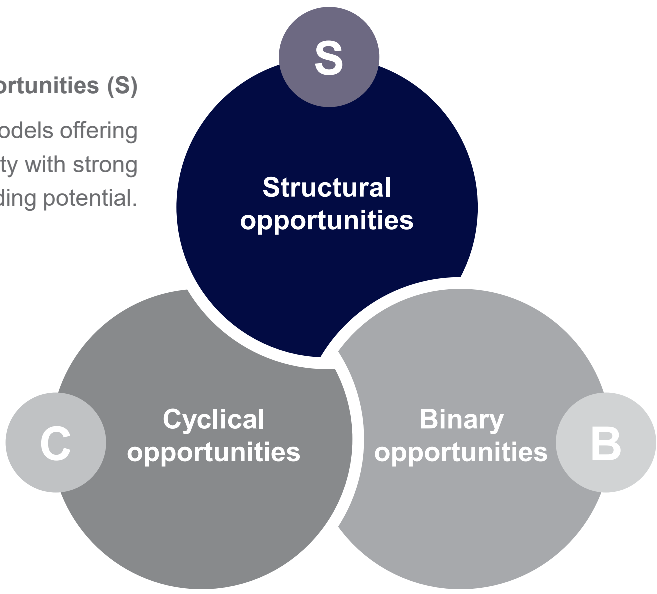
The SCB framework to invest in Global Tech

Structural opportunities (S)

Secular business models offering long term visibility with strong compounding potential.

Cyclical opportunities (C)

Tactical opportunities arising from valuation mismatches and demand-supply imbalances as industries and regions embrace innovation at different speeds.

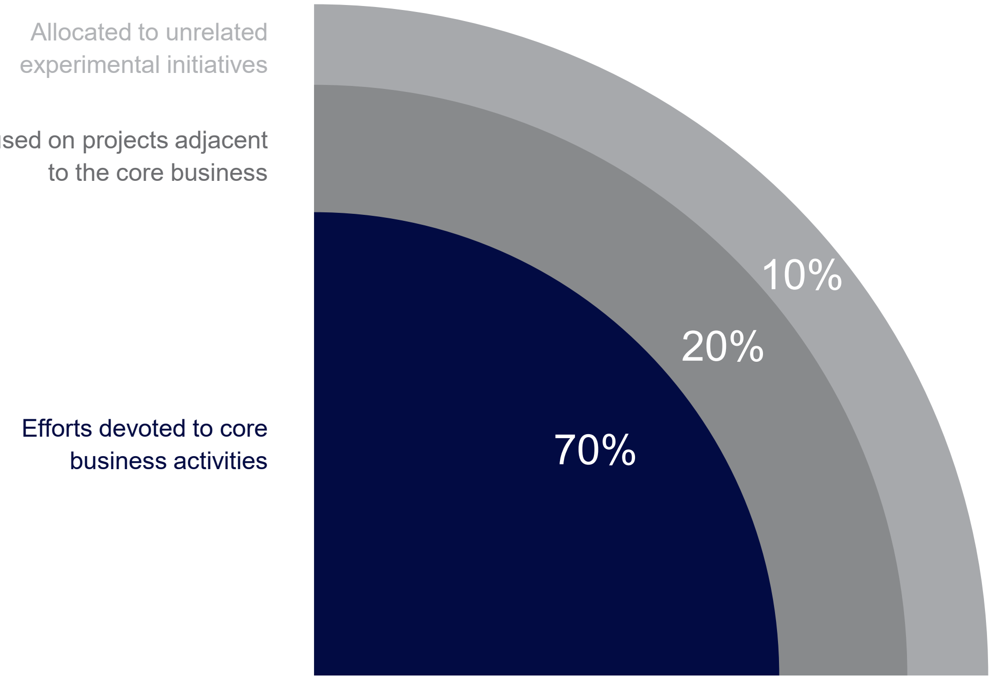


Binary opportunities (B)

Select turnaround as well as moonshot opportunities linked to next frontier technologies that offer optionality through an asymmetric risk-reward profile.

Source: Standard Chartered

In thinking about how to right size these three buckets, we draw inspiration from the 70-20-10 rule of innovation, popularised by Google, which seeks to optimise resource allocation as follows:



In a similar spirit, we believe the **70-20-10 rule** is well suited to Global Tech portfolios. While our intention is not to rigidly define or constrain portfolio allocations to precise limits, the underlying principles provide a useful framework for investors. By embracing flexibility rather than strict thresholds, we see greater scope for alpha generation, particularly when this framework is combined with complementary approaches.

For example, overlaying the **70-20-10 innovation framework** with our **Tech Industry Playbook** allows investors to right size positions across segments. Within semiconductors, logic and foundry can be viewed as **structural** exposures, memory as **cyclical**, and areas such as quantum computing as **binary** opportunities. Similarly, within software, horizontal software companies tend to be **structural**, vertical software companies more **cyclical**, and emerging agentic software companies, mostly **binary** in nature.

Against this backdrop, without being overly rigid and by applying the 70-20-10 rule in spirit, we believe that **approximately 70% of a Global Tech** portfolio can be allocated to **Structural opportunities**. The objective of this bucket is to defend the portfolio while compounding returns through companies with proven business models, strong margins, robust cash flow generation and sound corporate governance. Examples include platform companies with dominant industry positions across technology, healthcare and fintech. Given the compounding objective, the investment horizon for structural opportunities should be long-term.

Approximately **20% allocation** in our view should be directed towards **Cyclical opportunities** – companies benefiting from strong cyclical tailwinds driven by near-term valuation mismatches or demand supply imbalances. Unlike structural opportunities, these companies are often product centric (rather than platform based) or tier 2 players within their respective industries. As the primary objective is to capture near-term value, the investment horizon for cyclical opportunities is typically shorter, often **less than one year.**

Finally, roughly remaining **10% allocation** should, in our view, be reserved for **Binary opportunities** that offer asymmetric risk-reward profiles. These include potential turnarounds within fallen angels as well as investments in frontier or moonshot technologies that may not yet be commercially viable but possess the potential for exponential growth. Turnaround opportunities can emerge across market capitalisation segments and are typically driven by the prospect of structural mean reversion. Moonshot opportunities may include areas such as space technologies, neural interfaces, autonomous driving and quantum computing. While the investment horizon in this bucket is less prescriptive given the primary objective is to unlock asymmetric risk-reward profiles, disciplined risk management – such as the use of strict stop loss frameworks – is critical here.

In conclusion, we believe that a clear understanding of business models, effective segmentation into the right opportunity buckets, and disciplined right sizing of allocations are essential to generating **sustainable alpha** within Global Tech portfolios.

Staying the course and conclusions

With active management in place and the SCB framework guiding our approach to Global Tech, the next obvious question is whether investors should be mindful of additional idiosyncrasies when investing in the theme.

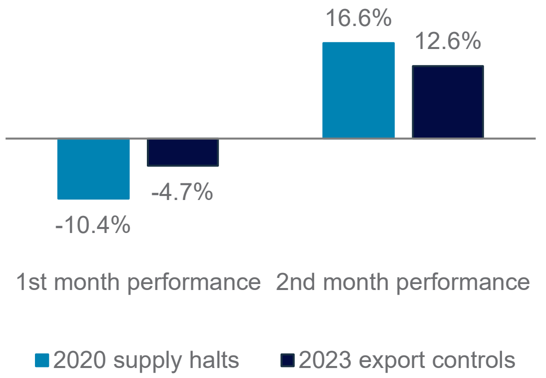
Given the dynamic news flow and the many innovative forces shaping Global Tech, investors require subject matter expertise to navigate the space effectively and generate alpha. As such, we believe professional managers are well equipped to actively manage Global Tech portfolios, particularly as they are better positioned to manage the behavioural aspects of investing in volatile segments such as tech or tech-enabled business models. The key is to stay invested, avoid being swayed by short-term volatility, and not be driven by emotional decision making – areas where professional managers can add meaningful value.

Take, for example, frequent supply chain disruptions in tech business models. A typical investor response is often to sell affected stocks, whereas a professional manager with a deeper understanding of supply chains and their many moving parts is less likely to overreact. As illustrated in the figure on the right, while the Global Tech theme initially suffered during the first month of supply disruptions, it rebounded strongly in the second month as risks appeared manageable. Remaining invested throughout, rather than selling low and buying back higher, would have been the more effective approach.

Fig. 9

Global Tech's performance during recent supply chain disruptions

First and second month performance of MSCI AC World Growth after 2020 supply halts and 2023 export controls



Source: FactSet, Bloomberg, Standard Chartered

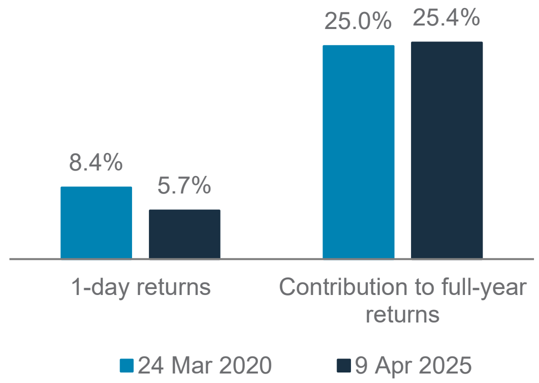
Another illustration of why staying invested matters can be seen in Fig. 10, which highlights the two best single day returns for the Global Tech theme over the past decade. Notably, these two days accounted for nearly 25% of the full year returns in their respective years. What is particularly striking is that these gains were generated during periods of heightened uncertainty (around peak COVID related stress in 2020 and around Liberation Day in 2025). Once again, this reinforces the importance of staying invested, and our view that professional managers are better equipped to navigate such environments.

Staying invested does not mean ignoring risks – this is not our message. Rather, we believe robust risk management is essential to preparing for both idiosyncratic risks, such as innovation, disruption, management changes and supply chain challenges, as well as systemic risks related to inflation, interest rates and geopolitics. For instance, Global Tech underperformed value in 2022 amid rising interest rates and heightened geopolitical tensions. However, the emergence of the ChatGPT app and generative AI use cases towards the end of that year reaffirmed that innovation remains firmly in the driving seat.

Fig. 10

The case for staying invested in Global Tech

Two best daily returns for Global Tech over the past decade accounted for roughly a quarter of that year's total returns



Source: FactSet, Bloomberg, Standard Chartered

PUBLIC

In summary, with Global Tech a key pillar of global asset allocation, representing around 20% of the CIO Foundation portfolio, investors must recognise the strategic importance of the theme and avoid complacency at a time when disruptive technologies such as AI are fundamentally reshaping the investment landscape. We believe that active management – anchored by clear frameworks and a disciplined commitment to staying invested – can make Global Tech a highly rewarding long-term opportunity. Over time, investors stand to benefit from the compounding power of business models with above average and durable growth prospects.

For more details on how to invest in Global Tech, please contact your Standard Chartered representative.

Redefining wealth through health and wellness

March 2026

WS Global CIO Office

The link between longevity, mental health and wealth outcomes has become clearer than ever before. Most investors focus solely on financial aspects, but studies suggest that a holistic approach, combining financial resilience, environmental harmony and physical/mental well-being, allows investors to build wealth that supports sustained, long-term success.

Steve Brice
Global Chief Investment Officer

Manpreet Gill
Chief Investment Officer, Africa, Middle East & Europe (AMEE)

This report explores the nuances of holistic, health- and wellness-centred wealth management and financial planning, including how these elements can be woven into wealth goals and the emerging trends shaping this approach.

Understanding holistic wealth management

Holistic wealth management is more than just portfolio performance and asset growth. It focuses on an investor's overall well-being by integrating financial health with physical, mental and emotional wellness.

This integrated approach ensures your wealth journey will not only support your financial aspirations but will also ensure you lead a fulfilling, resilient and purpose-driven life. This approach incorporates:

- **Comprehensive healthcare cost planning**, including emergency funds, insurance, long-term care considerations and medical directives
- **Stress-aware financial planning** that accounts for emotional triggers and behavioural biases (guardrails) while incorporating a structured decision-making framework that supports bias-free investing and ensures adequate risk preparedness
- **Preventive health strategies** and longevity planning
- Access to wellness services and **wellness-centric living environments** to support healthier lifestyles
- Wealth decisions aligned with **personal lifestyle goals**,including eco-conscious living, cross-border investing and travel
- **Family harmony and communication frameworks** for estate planning and business succession

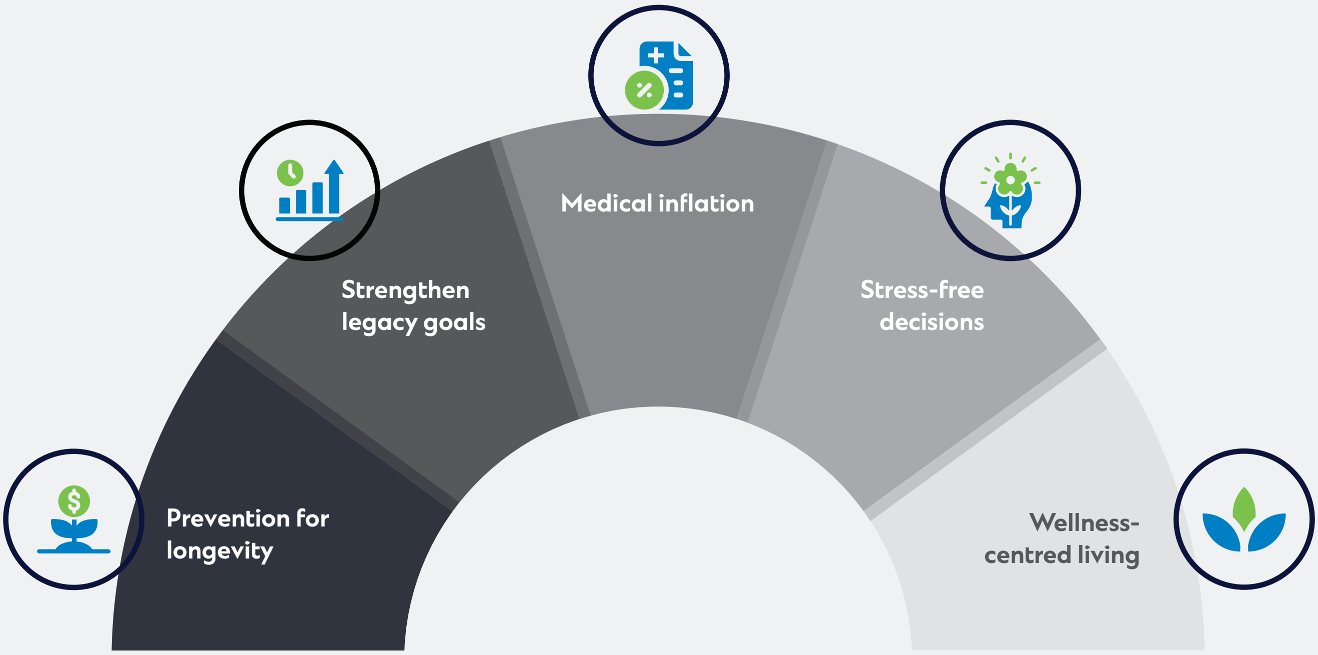
Importance of health and wellness in wealth strategy

Wealth strategies that overlook health and well-being can often invite several challenges. For instance, an investor's long-term financial goals could be derailed if a sudden illness or unexpected medical emergency leads to a loss of income.

Why integrate health and wellness into financial decision-making?



Source: Standard Chartered

There are several strong reasons to include health and wellness as part of your broader wealth management strategy:

Healthcare costs are unpredictable, inflationary and rising
According to WTW's 2026 Global Medical Trends Survey Report, medical costs rose by 10.4% in 2025, continuing a double-digit trend. A majority of global insurers expect medical costs to trend higher over the next three years. Moreover, public healthcare systems are overwhelmed, necessitating investors to avail private insurance to lower out-of-pocket expenses. Unexpected medical events can erode your savings, weaken your long-term wealth strategy or trigger debt.

Mental and emotional health swings can influence financial decisions

Nearly 90% of our financial decisions are based on emotions. Studies further indicate that analytical capabilities get compromised when an individual is emotionally distressed or cognitively overwhelmed. This could trigger impulsive financial decisions, overreaction to market swings, panic selling, timing mistakes and overspending. Many investors experience intense performance pressure, owing to the responsibility of managing family wealth and burnout from work or business obligations, leading to cognitive overload and emotional distress.

Preventive health measures can influence longevity and health spans

Early screenings, vaccinations and proactive stress management shape longevity and health spans. An American College of Cardiology study found that individuals who followed healthy lifestyle and dietary habits had about a 90% lower risk of heart attacks and around a 75% lower risk of developing type-2 diabetes. Investors are turning to personalised biomarker panels and digital wellness gadgets/platforms as part of preventive health measures. In essence, preventive healthcare not only helps avoid disease but also protects 'human capital' and extends wealth accumulation years.

Strategies to integrate health planning into wealth management

Several studies have found that emotionally resilient individuals – often built thorough proactive stress management – engaged more in multi-generational financial discussions. The Milken Institute also noted that wealthy individuals who prioritised preventive healthcare not only had a better quality of life but also bolstered their wealth journey.

Investors who track their wellness metrics are more likely to stay invested in long-range financial plans.
Here are some key strategies that investors can consider:

Health emergency buffers

Health emergency buffers act as a bridge between medical care and wealth by creating liquid capital that helps investors stay resilient during health shocks without compromising on long-term financial objectives. Preparedness for unforeseen medical events can prevent spirals of anxiety or forced portfolio liquidation. The need for sufficient healthcare emergency funds is also necessitated by the public healthcare systems being overwhelmed and exposing investors to such systems strain. In Asia, out-of-pocket spending remains elevated, and households shoulder around 40% of total health expenditure. A single medical emergency could disproportionately slow down wealth accumulation.

Insurance

A financial arrangement where you pay a premium to an insurer in exchange for protection against specific losses, is a common risk-transfer tool. Global premiums were valued over USD 7trn in 2024 across health, life and property and casualty (P&C) insurance. Different types of insurance cater to different risks and life goals:

Health insurance offers protection against any unforeseen medical shocks owing to illness or injury. It generally covers hospitalisation, medical expenses and ongoing treatment, helping individuals avoid out-of-pocket expenses. Health insurance is also a **wealth protection tool**, as it prevents financial shocks, ensures long-term earning capacity and allows disciplined financial planning.

- **International medical insurance** is ideal for globally mobile individuals and families. It provides seamless access to medical care across borders, often including hospitalisation, chronic condition management, emergency services and preventive care.
- **Integrated wellness insurance models** provide support across the entire health continuum – prevention, diagnosis, treatment, after-care and wellness coaching. They offer healthcare coordination, support long-term medical conditions and provide mental and emotional wellness support. These models also offer differentiated services such as priority access to specialists, second-medical-opinion services, personalised case management and high-touch medical concierge support that streamline health journeys and elevate outcomes.

- The health insurance landscape is undergoing a massive shift, with an emphasis on **holistic partnerships** driven by digital health trackers and wellness ecosystems. Many insurers partner with providers of healthtech devices and **wearables** to provide tailored health insights across the entire health lifecycle. In a sense, health insurance is transforming from a reimbursement product into an ongoing, tech-enabled wellness partner. This creates a win-win for both the insurer and insured, reducing premiums for the insured and lowering long-term claims for the insurance companies. Moreover, globally mobile individuals and families can benefit from priority access to global centres of medical excellence and cross-border care coordination.

Traditional health insurance vs integrated wellness insurance

Aspect	Traditional health insurance	Integrated wellness insurance
Approach	Reactive, claims driven	Proactive, continuous health management
Coverage	Hospitalisation, surgeries, recovery and eligible treatments	Medical cover, preventive care, mental health and after care services
Technology integration	Basic telehealth, limited wellness tools	Wearables, health analytics, telehealth and personalised coaching
Financial impact	Protects against high medical bills	Reduces long term healthcare costs, lowers claims and improves risk profile
Mental well-being support	Usually minimal or limited	Includes mental health and well-being support
Ideal for	Standard protection against health risks	Holistic health optimisation and long term well-being

Source: Standard Chartered

Life insurance hedges life risk. Beyond guaranteed payouts to beneficiaries upon the death of a policyholder, it provides emotional security and reduces anxiety because dependents are protected. Life insurance supports a person's wealth journey by **combining risk protection with disciplined, long-horizon savings**. Several modern-day policies integrate investment-linked solutions with protection to help investors accumulate wealth, while securing guaranteed benefits for their families. Life insurance solutions are also valuable tools in **estate planning**; they provide liquidity to cover for taxes and debt without the need to liquidate estate.

Property and casualty (P&C) insurance protects assets (property) and covers against liabilities (casualty), reducing anxiety and creating a 'peace-of-mind' effect. Although P&C insurance is often seen only as a basic protection tool, it is a critical health and wealth preservation technique. It **shields your assets, including houses and businesses**, from losses that can wipe out years of savings and derail long-term plans. With small, predictable premium payments, unpredictable, high-loss events can be hedged to support stable cash flow and long-term wealth preservation.

Insurance, in any form, reduces volatility and improves investors' financial resilience.

Preventive health strategies

Preventive health strategies can mitigate health risks while also reframing the approach to wealth. A McKinsey Health Institute paper found that investors who consider proactive wellness and health strategies tend to be more confident in financial/legacy planning:

- Advanced technologies such as predictive analytics, next-gen genomic sequencing and IoT-enabled wearables are leading the transformation **from a reactive to a proactive** approach towards healthcare. **Genomic testing** identifies health risks and predicts disease likelihood, guiding early diagnosis. **Wearables** deliver real-time data for continuous monitoring, early detection and personalised preventive care. These approaches can support precision medicine, better physical activity, cardiovascular health and diabetes management.
- Organisations are including **preventive programmes** as they can reduce healthcare costs and claims significantly. For example, Cleveland Clinic's employee wellness initiative saved its healthcare system approximately USD 180m by enabling employees to reach eight preventive health targets (including stress management, healthy BMI and annual primary-care visits). Savings free up more capital for long-term goals such as retirement and investments.
- Proactive health and wellness strategies help to protect the primary wealth engine, i.e., **human capital**. The Cleveland Clinic study also showed that healthy individuals could reduce their chronic-disease risk by nearly 90% through preventive strategies, thereby strengthening their long-term capacity to work. **Career longevity** could translate to higher earnings and preserve income streams.
- With reduced risk profiles owing to preventive care, investors generally pay lower premiums and premium increases are slower. A study indicated that individuals under preventive care programmes are able to reduce premiums roughly worth USD 1,600 per family. This **reduced cash outflow** helps households maintain steady investing habits.

Wellness-centred living

Wellness-centred living refers to homes, communities and neighbourhoods that are intentionally designed to support physical, mental and emotional well-being. **Clean air, natural light, low toxicity and noise, and an active lifestyle** are some key features of such health environments. The Global Wellness Institute (GWI) identifies wellness-centred communities as the next frontier of growth for the wellness industry. Wellness real estate has been growing at 19.5% annually, nearly 4x faster than traditional real estate.

GWI assessed clinical and building-environment data and found that improved health environments contributed to better health outcomes. Buyers are increasingly seeking **sustainable and health-forward environments**, a trend that supports premium willingness-to-pay for homes with superior air quality, natural light and biophilic design. Growing buyer preference, faster absorption and category outperformance indicate that wellness properties tend to hold value better and have better liquidity than traditional properties.

It’s time for an integrated approach

All the available data points to the fact that investors are increasingly recognising health and wellness as key components of holistic wealth management. This has resulted in systemic shifts in the financial planning and investing landscape. Homes with clear air, natural light, low toxicity and green access are being pursued for their potential to contribute to overall wellness and financial stability. Insurance is seeing an evident shift from being a claims-driven coverage to offering preventive care, mental and emotional support, telemedicine access and health analytics, which enables tailored advice and risk management. Wearables and real time health data are helping improve investors’ overall well-being and financial behaviour.

As the link between wealth and health strengthens, investors who follow a holistic and integrated approach are likely to build the most resilient portfolios.
