J.P.Morgan

BizLink

Power fuels growth with CPO adding upside; assume coverage at OW

Overweight

3665.TW, 3665 TT
Price (14 Jul 26):NT$1,775.00

▲**Price Target (Jun-27):NT$3,100.00**
Prior (Dec-26):NT$2,100.00

We assume coverage of BizLink at OW and Jun-27 PT of NT$3,100. We forecast an EPS CAGR of 50% during FY25-28E, driven by higher power content value, growing optical/CPO exposure, and a robust capital equipment business on semi capex expansion. While the stock has corrected by 36% (-43% vs TAIEX) after the 1Q26 gross margin miss, we view the margin pressure as largely transitory and remain positive on the upcoming power product upgrades under the Vera Rubin platform, with our FY27/28E EPS forecasts 10%/4% above consensus.

- **Power content value enhanced by AI infrastructure upgrade.** As AI platforms migrate from GB200/300 to VR200 and VR Ultra, we forecast BizLink's power content value to increase from c.US$8-10k per rack for GB200/300 to >2x for VR200, with meaningful upside potential for VR Ultra under the HVDC structure. In addition, by leveraging its early design-in engagement with NVIDIA/hyperscalers, as well as its enhanced system integration and customization capabilities from the announced Interplex Datacom acquisition, we estimate BizLink's power interconnect revenue (currently c.50% of HPC revenues) to grow 122%/92% YoY in FY26/27E.
- **Optical interconnects open new growth opportunities.** We believe BizLink would benefit from increasing optical interconnect adoption as data transmission speeds upgrade to 1.6T/3.2T, helped by its partnership with SENKO and the acquisition of XFS, which has a longstanding relationship with Corning. Beyond its fiber assembly business, BizLink is expanding into shuffle box solutions, alongside the ramp-up of NVIDIA's Spectrum-X CPO switches from late 2026. We forecast its shuffle box revenue to grow 4.8x/86% YoY in FY27/28E, with further upside as the industry evolves to scale-up CPO.
- **Capital equipment growth supported by rising WFE spending.** BizLink provides box-build and system integration solutions to WFE manufacturers, with its capital equipment revenue closely tied to WFE spending trends. As our semiconductor team forecasts WFE market to grow 28%/29% YoY in 2026/27E, we project BizLink's capital equipment revenue to increase 27%/26% YoY, underpinned by continued strength in semiconductor capex.
- **OW rating with a Jun-27 PT of NT$3,100.** Our Jun-27 PT of NT$3,100 is based on a target P/E of 23x and a 12M forward EPS of NT$135, implying 75% upside. We believe the target multiple is justified by BizLink's FY26/27E earnings growth of 47%/80% YoY, while largely in line with its 10-year P/E range of 7-24x (±2std vs the mean) and interconnect peer average of 22-23x. Despite a 36% share price correction following the 1Q26 results on weaker gross margins, we view the pressure as temporary with profitability set to improve gradually as platform transition headwinds ease and higher-margin power products increase contribution. Heading into 2Q26 results, we believe gross margin will be the key focus, with solid June sales providing early signs of improving operating trends and supporting our 2Q26 GM forecast of 30.6% (vs 30.8% consensus). Key downside risks include: 1) market share loss amid intensifying competition; 2) moderating AEC growth at higher data transmission speeds; 3) GM pressure during platform and product transitions; and 4) weaker-than-expected AI server demand and order growth.

Summary Investment Thesis and Valuation

Investment Thesis

We rate BizLink OW considering: 1) rising power demand and content value as AI platforms transition to VR200 and VR Ultra; 2) additional growth opportunities from the ramp-up of optical interconnect solutions and solid capital equipment business; and 3) strengthened competitive positioning through close design-in collaboration with NVIDIA and hyperscalers.

Valuation

Our Jun-27 PT of NT$3,100 is based on 23x of 12M forward EPS. The 23x valuation multiple is at the higher end of the 10-year trading range, on the back of a solid growth outlook thanks to rising exposure to high growth and margin-lucrative HPC and capital equipment business.

Investment Summary

OW rating with a Jun-27 PT of NT$3,100. We assume coverage of BizLink with an OW rating and a Jun-27 PT of NT$3,100, based on our target P/E of 23x and a 12M forward EPS estimate of NT$135, largely in line with its historical and peer trading range. We forecast BizLink to deliver an EPS CAGR of 50% over FY25-28E, driven by higher power content, increasing exposure to optical/co-packaged optics (CPO) solutions, and robust capital equipment growth amid the semi capex upcycle. Despite the 36% share price pullback (-43% vs TAIEX) following the 1Q26 gross margin miss on (12 May 2026), we see the margin pressure as largely temporary and expect the power content upgrade to be margin accretive, serving as a key earnings growth driver. Heading into 2Q26 results, gross margin remains the key watch point, with solid June sales providing early signs of improving operating trends and supporting our 2Q26 GM forecast of 30.6% (vs 30.8% consensus).

Power content value enhanced by AI infrastructure upgrade. We view BizLink as a key beneficiary of rising AI power requirements. As AI platforms migrate from GB200/300 to VR200 and VR Ultra, we estimate BizLink's power content value to increase from c.US$8-10k per rack for GB200/300 to >2x for VR200, with meaningful upside potential for VR Ultra under the high-voltage direct current (HVDC) structure. Moreover, we believe BizLink's design-in engagement with NVIDIA and hyperscalers, along with enhanced system integration and customization capabilities from the announced Interplex Datacom acquisition (link), should strengthen its customer stickiness amid rising qualification barriers. We forecast power interconnect revenue to grow 122%/92% YoY in FY26/27E, respectively.

Optical interconnects open new growth opportunities. As data transmission speeds increase to 1.6/3.2T with rising optical/CPO adoption, we believe BizLink's optical business will emerge as a future growth engine, supported by its acquisition of XFS (link) and partnerships with SENKO and ficonTEC. While optical solutions currently account for only a minimal portion of BizLink's revenue, we believe the contribution is likely to increase gradually along with the ramp-up of shuffle box solutions, which we forecast to grow 4.8x/86% in FY27/28E, with further upside from the scale-up of CPO.

Capital equipment growth supported by rising WFE spending. BizLink's box-build and system integration capabilities have deepened its engagement with leading wafer fab equipment (WFE) customers, making its capital equipment revenue highly correlated to WFE spending. As our semiconductor team projects the WFE market to grow 28%/29% YoY in FY26/27E (link), driven by accelerating AI-related investments and demand for advanced packaging, we estimate BizLink's capital equipment segment to benefit from the trend and grow 27%/26% YoY over the same period.

Increasing AEC penetration, but with rising competition and moderating momentum. As the sole manufacturing partner of Credo, we believe BizLink should continue to benefit from rising active electrical cable (AEC) adoption under 800G/1.6T, supporting its AEC revenue growth of 65%/34% YoY in FY26/27E. However, we believe growth may moderate beyond FY27 as competition intensifies and AEC penetration gradually saturates given the physical limits at higher data speeds for copper connectivity.

Amanda Chang AC
(886-2) 2725-9861
amanda.chang@jpmorgan.com

JPM's above-consensus forecasts reflect a more constructive HPC outlook. Our FY26-28E revenue forecasts are 8%/16%/23% above Bloomberg consensus, reflecting a more constructive view on high performance computing (HPC) growth, supported by growing power revenue and an increasing optical contribution, while we also factor in additional revenue from the Interplex Datacom acquisition. Despite higher revenue assumptions, our FY26E earnings are only slightly above consensus by 3% due to expectations of increased M&A related costs, while our FY27E earnings are 9% above consensus on a stronger contribution from higher-margin power products. Overall, our FY26-28E EPS forecasts are 2%/10%/4% above consensus estimates, respectively.

Key risks to our price target and OW rating: 1) Market share loss amid intensifying competition; 2) AEC growth moderates as copper connectivity approaches its physical limits at higher transmission speeds; 3) gross margin pressure during product and platform transitions; and 4) weaker-than-expected AI server demand and order growth.

Table 1: Overview of BizLink's key growth segments

Business	Segment	Major growth outlook	As % of FY26E revenues	Revenue YoY growth in FY26/27E**
IT& Datacom – HPC	Power	AI power upgrades drive power content value per rack from US$8-10k (GB200/300) to >2x under VR200, with further upside from HVDC adoption.	29%	122% / 92%
	Optics	Optical interconnect and future CPO adoption drive shuffle box demand, supported by XFS acquisition and strategic partnerships.	2%	Shuffle box: 4.8x / 86%
	AEC	Increased 800G/1.6T AEC penetration supports growth, although momentum may moderate beyond FY27 amid rising competition and copper limits at higher speeds.	14%	65% / 34%
Industrial – Capital equipment	SPE	WFE market growth of 28%/29% YoY in FY26/27E supports demand, with BizLink leveraging its system integration capabilities.	11%	27% / 26%

Source: J.P. Morgan. **Note: Shuffle box growth is on a FY27/28E basis given nil revenue in FY25; all other growth figures are FY26/27E.

Valuation Analysis

Jun-27 PT of NT$3,100 based on 23x of 12M forward EPS

We derive our Jun-27 price target of NT$3,100 based on 23x of 12M forward EPS, implying 75% potential upside from current levels. We value BizLink using a P/E methodology as we expect the market to remain focused on earnings growth and the sustainability of AI-driven profit expansion. Our valuation is based on 12M forward EPS, which we believe better captures the continued growth of AI-related power products, and the increasing contribution from optical solutions.

We assign a target P/E of 23x, supported by BizLink's decent earnings growth of 47%/80% in FY26/27E, driven by rising power content value, increasing exposure to optical/CPO solutions, and robust capital equipment demand amid the semiconductor capex upcycle. The target multiple is also broadly consistent with the company's historical trading range of 7-24x (±2std vs the mean) over the past decade. We assign a multiple towards the upper end of the range to reflect stronger earnings visibility and structural growth driven by AI-related demand. Compared to peers, our 23x target P/E is largely in line with the average valuation of domestic and global interconnect companies of 22-23x, per Bloomberg estimates, while remaining at a discount to optical peers, reflecting the fact that optical connectivity is still an emerging growth driver rather than a core earnings contributor for BizLink.

I. Power content value enhanced by AI infrastructure upgrade

A leading supplier of power interconnect solutions

BizLink is a leading provider of power interconnect solutions, including power whips, busbars, inner cables and connectors, etc. The company designs and manufactures these products and usually supplies them to power system integrators or ODMs for assembly before deployment at hyperscale data centers. BizLink has established long-term relationships with tier-1 cloud service providers (CSPs), such as Amazon and Microsoft, and has been included in NVIDIA's Recommended Vendor List (RVL), further strengthening its position within the AI ecosystem.

Table 6: Summary of BizLink's major power products

	Power whip	Rack busbar	Inner busbar	Powershelf busbar
Description	An electical cable to connect the main power source to datacenter/AI server racks	A vertical busbar that distributes power from a central supply (power shelf) to multiple servers and switches	A busbar used inside a compute tray to direct power into individual trays	A busbar acts as the main power distribution backbone for powershelf
Specification example	AC/DC power whips with 30-100A outputs	Power ratings ranging from 48-54V and 300-1400A; or liquid-cooled rack busbar	Inner busbar with 12V	Support 12-48V with rated power 18-100kW
Volume content (GB200/300 as an example)	1 per powershelf	1 per server rack	1 per compute tray	1 per powershelf
ASP	Medium	High	Low	Low
Illustration				

Source: BizLink, J.P. Morgan.

AI power upgrades drive higher content value

The demand and consumption for AI infrastructure power is accelerating amid higher computing power demand, with the rack power consumption increasing from 120-140kW for GB200/300 to 200-250kW for VR200, and likely to reach over 600kW for VR Ultra. To accommodate these surging power needs, we expect BizLink to benefit from this structural tailwind, with its content value rising from c.US$8-10k for GB200/300 to c.US$19-21k for VR200 and seeing meaningful upside for VR Ultra under the HVDC structure.

- **VR200: power content value per rack expected to reach US$19-21k.** We see material content value expansion for BizLink under the VR200 platform relative to GB200/300, driven by several key upgrades: 1) power whip specifications increasing from 60A to 100A, alongside a rise in quantity from 6 to 8 units per rack; 2) higher rack busbar ASPs, supported by an increase in current capacity requirement from 1,400A to 5,000A and the adoption of liquid-cooling designs; and 3) specifications upgrade for inner and power shelf busbars, resulting in higher ASPs, while the number of power shelf busbars is expected to double. Taken together, we estimate BizLink's power content value per VR200 rack will reach US $19-21k, representing over 2x of the GB200/300.

- **VR Ultra (HVDC supporting 1 IT rack):** To accommodate higher power density, VR Ultra is likely to adopt an 800V HVDC architecture with power components relocated from the IT racks to a sidecar power rack. Under this framework, we believe: 1) 12 AC power whips feeding power into the power rack, and 2) 6 DC power whips connecting the power rack to an IT rack. Although detailed system specifications have yet to be finalized, we believe the VR Ultra architecture (1 power rack + 1 IT rack) could materially expand BizLink's power content value relative to current-generation platforms, given the rising power density and component specifications under the HVDC structure.

Design-in advantages with robust AI server demand to reinforce growth outlook

Beyond content value expansion, BizLink has evolved from a component supplier into a strategic development partner, collaborating with NVIDIA and hyperscalers from the early design-in stage. This should increase customer stickiness and switching costs as AI platforms transition to 800V HVDC architectures, where technical and qualification barriers are much higher. With the announced (link) Interplex Datacom acquisition to further enhance BizLink's system integration and customization capabilities, we believe the company could gradually gain market share within the NVIDIA ecosystem, reinforcing its leadership among power interconnect suppliers.

In addition, robust AI server demand provides another tailwind to BizLink's power-related revenue growth. According to our Taiwan Technology team, total AI server volumes are estimated to grow at a 32% CAGR over 2025-28E (link), supported by double-digit shipment CAGRs across both high-end GPU and ASIC AI servers, amid expanding CSP capex and training/inference-led AI GPU/ASIC demand.

Power interconnect solutions revenue to grow 122%/92% YoY in FY26/27E

We forecast BizLink's power interconnect revenue to reach NT$30/58bn in FY26/27E (+122%/92% YoY), driven by rising power content in next-gen AI servers, market-share gains from BizLink's design-in capabilities, and robust AI server demand. We also estimate the power business to remain the key growth driver, with the power mix increasing from 51% in FY25 to 65% in FY28E relative to data-related products.

II. Optical interconnects open new growth opportunities

NVIDIA's photonics switch highlights CPO's emerging role in AI networking

As data transmission speeds double from 800G to 1.6/3.2T, traditional copper solutions are approaching their physical limits, leading to increasing adoption of optical connectivity across AI networking infrastructure. While pluggable optics, such as QSFP and OSFP (Quad/Octal Small Form Factor Pluggable) remain one of the major optical solutions nowadays, their scalability is gradually challenged by the limits in power efficiency, bandwidth density, and signal integrity at higher data rates.

Against this backdrop, co-packaged optics (CPO), which integrate optical engines directly alongside application-specific integrated circuits (ASICs) within a single package, are emerging as a key next-generation interconnect architecture. Reflecting this trend, NVIDIA introduced its CPO-based switch platforms, Quantum-X and Spectrum-X Photonics at GTC 2025 (GPU Technology Conference), designed to deliver ultra-high-bandwidth and low-latency connectivity for AI data centers. The Rubin generation will mark the initial deployment of Spectrum-X CPO in 2H26.

Table 10: Physical limits of copper cables under AI infrastructure

Physical limits	Description
Insertion loss & signal integrity	Signal attenuation increases under higher data rates and longer transmission distances, limiting the reach of passive copper cables.
Power consumption & thermal management	Higher speeds require more signal-processing components (e.g. digital signal processors [DSPs], retimers, or active cables) to maintain performance, leading to higher power consumption and heat generation.
Bandwidth scalability & cable bulkiness	Supporting higher bandwidths requires larger conductors and more complex cable designs. Higher-power copper cables also tend to be bulkier and less flexible, pushing copper closer to its physical limits.

Source: J.P. Morgan.

Table 11: Silicon photonics supply chain

Layer	Segment	Company example
Chip Design	PIC / EIC / DSP	Broadcom, Marvell, Intel, MACOM, Ayar Labs, NVIDIA
Foundry & Materials	SOI Wafer, Foundry	Soitec, TSMC, Intel, GlobalFoundries, UMC
Light Source	Laser, ELS	Coherent, Lumentum, Broadcom, Sumitomo Electric, LandMark

XFS acquisition and strategic partnerships support optical growth

BizLink has expanded its optical business through the acquisition of XFS Communications in Jan 2026. Within the CPO value chain, XFS specializes in fiber patch cords, Multi-fiber Termination Push-on(MTP)/Multi-fiber Push On (MPO) assemblies, and shuffle boxes. Its key competitive advantage stems from a long-standing partnership with Corning (GLW US, covered by Joseph Cardoso), where Corning supplies the optical fibers, while XFS provides downstream assembly services. Moreover, XFS is advancing into next-generation multi-fiber micro connector (MMC) solutions, which offer up to 3x higher port density than MPO and feature low insertion loss. While XFS's production is currently centered in Shenzhen, capacity expansion in Tainan in 2H26 should support future business growth.

Beyond XFS, BizLink also partners with SENKO, a leading MPO connector supplier, and ficonTEC, a provider of optical assembly and testing equipment, to enhance its optical capabilities. We view the company's expansion into optical interconnects as strategically important for long-term growth, given the increasing optical adoption in AI infrastructure.

Table 12: Product summary of XFS

Offerings	Fiber patchcords	MPO/MTP assemblies	Shuffle box
Description	A fiber cable capped with connectors at both ends	The process of attaching MPO/MTP connectors at the ends of fiber cable, usually to allow multiple fibers to be connected through a single interface	An optical fiber cross-connect device based on precision fiber routing on steel or flex board
Specification example	**By mode type:** (1) Single-mode fibers (SMF): Carry a single ray of light over long distances; Polarization-maintaining fiber (PMF) is a specialized variant of SMF. (2) Multi-mode fibers (MMF): Allow multiple rays of light to travel simultaneously for shorter distances.	Offering 4/8/12/24/48-fiber MPO assemblies or MPO/MTP module	Custom cross matrices (e.g.144x144); compact size integrated with ODF (Optical Distribution Frame)
Illustration			

Source: XFS, J.P. Morgan.

Table 13: Key comparison of MPO vs MMC

Item	MPO	MMC
Full name	Multi-fiber Push On	Multiple-fiber Miniature Connector
Size	Larger	Smaller (~1/3)
Port Density	Standard density	Higher port density (~3x)
Fiber Capacity	Typically 8/12/16/24 fibers	Supports higher-density configurations
Usability	Conventional push-pull design	Lower insertion/extraction force
Primary Applications	400G / 800G networks	1.6T and beyond

Shuffle box to begin a full-year contribution in 2027

While optical solutions currently contribute only a minimal portion of BizLink's revenue, we think the optical revenue would gradually pick up in late FY26, with a more meaningful earnings contribution from FY27, driven mainly by the demand for shuffle boxes as NVIDIA's Spectrum-X CPO switches ramp-up. We forecast CPO switch shipments of 90/157k units in FY27/28E and assume a shuffle box ASP of US $3.5k per unit. We further assume Corning captures 45% of shuffle box demand, with BizLink supplying 40% of Corning's requirements. Based on these assumptions, we project BizLink's shuffle box revenue to reach US$79/148mn in FY27/28E (or NT $2.5/4.7bn, +4.8x/86% YoY), while there could be potential upside from the scale-up of CPO in FY28-29E not yet factored into our model.

Table 14: CPO sales contribution analysis

Item	2026E	2027E	2028E
CPO switch shipment (k units)	17	90	157
Shuffle box (US$)	3,500	3,500	3,500
Market share for suppliers (%)			
Corning	45%	45%	45%
BizLink	40%	40%	40%
Competitors	*60%*	*60%*	*60%*
Browave and others	*55%*	*55%*	*55%*
BizLink's shuffle box revenues (US$m)	**14**	**79**	**148**
As % of total revenues	0%	2%	3%

III. Capital equipment growth supported by rising WFE spending

Broadening SPE capabilities via box-build and system integration

BizLink's capital equipment segment is mainly driven by its SPE business, which supplies cable assembly, box-build, and subsystem integration (e.g. electrical/fluid distribution systems) solutions to leading WFE manufacturers. Through acquisitions such as Speedy (2020) and Easys (2024), BizLink has been moving up the value chain from a traditional cable/connector supplier towards higher-value integration capabilities.

Figure 19: Box build assembly

Source: Easys.

Figure 20: Fluid system integration

Source: Easys.

Capital equipment business revenue to grow amid semi capex upcycle

Semiconductor capex continues to expand, driven by accelerating AI investment, rising advanced-packaging demand, and leading-edge nodes migration, with major WFE players guiding to improving order visibility and stronger 2026 growth. According to our semiconductor team (link), the WFE market is expected to grow 28%/29% YoY in 2026/27E after 11% YoY in 2025. Given BizLink's capital equipment revenue is highly correlated with WFE spending, we forecast 27%/26% YoY growth in FY26/27E, supported by robust industry demand and increasing subsystem penetration.

Potential growth opportunities in LEO satellites and robotics

BizLink has been expanding into emerging applications such as low-earth orbit (LEO) satellites and drones, supplying space-grade cables, harnesses, and module assemblies for satellite and ground-station systems. With the rising adoption of industrial automation, the demand for high-flex and durable connectivity solutions applied to humanoid robotics is also increasing. Although the revenue contribution remains limited at present, we believe BizLink is well positioned to participate in these emerging growth markets in the long-run given its engineering capabilities and comprehensive interconnect solutions.

Amanda Chang AC
(886-2) 2725-9861
amanda.chang@jpmorgan.com

IV. Increasing AEC penetration but with rising competition and moderating momentum

The bridge from passive copper to optical connectivity with increasing penetration

As AI data rates migrate toward 800G/1.6T, traditional passive copper cables (e.g. direct attach copper[DACs],) face growing signal integrity and distance limits, while optical solutions remain constrained by higher costs and ecosystem immaturity. By integrating signal-conditioning ICs (e.g. retimers) into traditional copper cable architectures, AECs offer an attractive balance between performance and cost, making them suitable for NIC-to-ToR (Network Interface Card to Top-of-Rack) applications.

Following an initial phase of rapid deployment, AEC demand is entering a more normalized growth stage. Nevertheless, industry adoption continues to broaden across hyperscalers and NeoCloud providers, supporting a structural long-term outlook. Industry forecasts from 650 Group suggest AEC shipments will increase from c.5mn units in 2025 to c.12mn units by 2028E, implying a CAGR of 31%, while we estimate the cloud NIC-to-ToR AEC TAM could reach c.US$4-5bn by 2028E, based on a blended ASP assumption of US$350-400 per cable.

Table 15: Cable technology comparison

Technology	Direct Attach Copper (DAC)	Active Copper Cable (ACC)	Active Electrical Cable (AEC)	Short-Reach Optical TRx / Active Optical Cable (AOC)
Transmission medium	Copper (electrical)	Copper (electrical)	Copper (electrical)	Fiber (optical)
Reach	1-2 Meters	Up to 5 Meters	Up to 7 Meters	Up to 150+ Meters
Power	N/A	1-3 Watts	10 Watts	15-20 Watts
Cost	Lowest	Low-Mid	Mid	High
Reliability	High (no active parts)	Mid-High	Mid-High	Mid

Source: J.P. Morgan. Note: Optical TRx / AOC represents a single end (e.g., total power for an interconnect closer to 30-40 watts).

Figure 27: Industry cable share by type

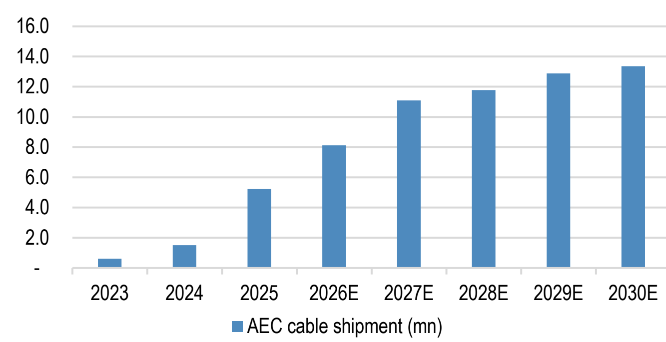
Figure 28: Industry AEC cable shipments



Source: 650 Group.

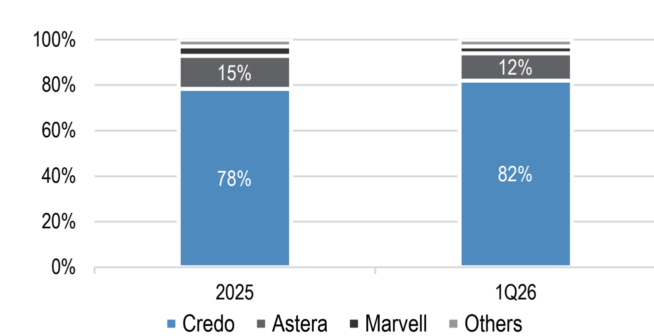
Amanda Chang AC
(886-2) 2725-9861
amanda.chang@jpmorgan.com

BizLink serves as a key supplier for AEC leader Credo despite rising competition

BizLink is the sole manufacturing partner of Credo (CRDO US, covered by Joseph Cardoso), the leading AEC supplier with a c.80% market share. While Credo continues to maintain a dominant position, the competitive landscape is gradually becoming more crowded as players such as Astera Labs, Marvell and Broadcom expand their presence in the AEC market. Among them, Astera has emerged as the second-largest AEC vendor (c.10-15% market share), with its February 2026 Amazon warrant agreement (link) further strengthening its position in AI connectivity market.

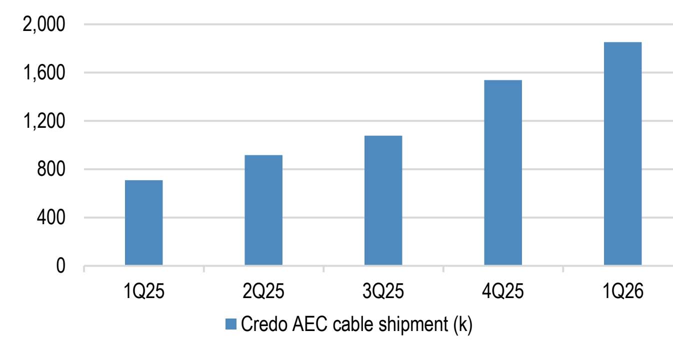
Although increasing competition could gradually pressure both Credo's market share and BizLink's sole-supplier status, we view the risk as manageable. Credo's management in their 4Q26 earnings call reiterated AEC as a core growth engine amid rising penetration and higher ASPs under the shift from 800G to 1.6T. Meanwhile, BizLink's early engagement in product development and manufacturing expertise should support its expansion into next-gen/high-end AEC products, where technical barriers and customer stickiness remain high. As such, we think competitive pressure may emerge more in legacy products, while BizLink should continue to benefit from the structural growth of the AEC market.

Figure 29: AEC market share by revenue



Source: 650 Group.

Figure 30: AEC cable shipment of Credo



Source: 650 Group.

ALC extends the interconnect roadmap beyond AEC at 3.2T

As AECs approach their performance limits at 3.2T and beyond, Credo is developing MicroLED-based ALC (Active LED Cable) solutions, which aim to deliver AEC-like reliability and power efficiency while extending reach to up to 30 meters through a thin-gauge cable, making it ideal for row-scale networks. Following the acquisition of Hyperlume in Sep 2025, Credo plans to begin sampling ALC products in FY27, with initial revenue contribution targeted for FY28, and believes the long-term ALC TAM could exceed 2x of the AEC market. We therefore consider ALC a potential new growth driver for BizLink, supported by its long-existing relationship with Credo and increasing adoption from FY28.

Amanda Chang AC
(886-2) 2725-9861
amanda.chang@jpmorgan.com

Table 16: Comparison between AEC and ALC

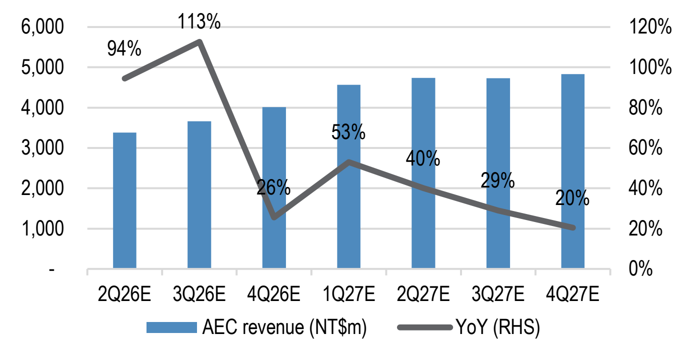
Item	AEC	MicroLED-based ALC
Medium	Copper	Optical fiber
Reach	Up to ~7m	Up to ~30m
Power consumption	Low	Low
Cable size	Thin	Thin
Suitability for 3.2T+	Limited	Better positioned
Commercialization	Available today	Sampling in FY27

Source: J.P. Morgan.

AEC revenue to grow 65%/34% YoY in FY26/27E

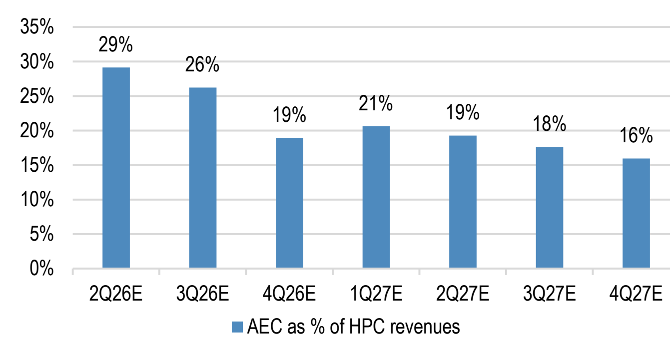
AEC continues to be the major growth driver of BizLink's data connectivity revenue, supported by ASP expansion from the 800G-to-1.6T transition and increasing adoption among hyperscalers and NeoClouds. We forecast AEC revenue to grow 65%/34% YoY in FY26/27E before moderating to 11% YoY in FY28E as competition intensifies and optical interconnect solutions ramp up.

Figure 31: BizLink's AEC revenue and YoY growth



Source: J.P. Morgan estimates.

Figure 32: BizLink's AEC as % of HPC revenues



Source: J.P. Morgan estimates.

Amanda Chang AC
(886-2) 2725-9861
amanda.chang@jpmorgan.com

Key Investment Risks

1) Market share loss amid intensifying competition

As AEC penetration increases and more suppliers enter the market, BizLink could face dual-sourcing risk that weakens its current sole-supplier position within Credo's supply chain. However, we believe BizLink's deep partnership with Credo should enable it to move up the value chain into higher-end AEC products and next-generation optical solutions (e.g. ALC). While competition is likely to intensify for legacy AEC products, BizLink should be able to manage by optimizing existing capacity with limited incremental capex and operating expenses, while a more favorable product mix should also help mitigate margin pressure.

For power solutions, while the power whip market may become increasingly competitive, we believe BizLink could sustain its leading position, supported by its integrated power solution offering (e.g. supplying both power whips and busbars rather than standalone solutions), and a proven track record as a qualified supplier within NVIDIA's AI server ecosystem. Moreover, the lengthy qualification process along with higher switching costs could make customers less likely to switch suppliers once design wins are secured. On the other hand, we believe BizLink has room to further expand in busbars given its relatively low existing share.

2) Moderating AEC growth at higher data transmission speeds

We expect AEC penetration to continue to increase over the medium term, but growth may moderate as data transmission speeds approach the physical limits of copper-based connectivity, leading to broader adoption of optical interconnect solutions at higher data rates. However, we believe this transition will be gradual rather than disruptive, as AEC should remain a cost-efficient and reliable solution for short-reach applications, while BizLink is also expanding into optical connectivity products, which should help mitigate the long-term transition risk.

3) Gross margin pressure during platform and product transitions

Gross margins could come under pressure during product and platform transitions, especially in the early stages of new product ramps before production reaches optimal yields and scale. Nevertheless, we expect such pressure to be temporary as manufacturing efficiency improves and the revenue mix shifts toward higher-value products, while BizLink's exposure to diversified applications should also help mitigate the earnings impact from single product transition.

4) Weaker-than-expected AI server demand and order growth

BizLink's HPC business (c.45% of 1Q26 revenue) is mainly driven by AI server demand, and thus slower-than-expected server deployment or next-generation platform adoption could weigh on BizLink's revenue growth. However, the company has diversified exposure to industrial, EV, and electrical appliances to help mitigate the downside, while we continue to view AI infrastructure investment as a secular growth trend, even if encountering short-term demand volatility.

Amanda Chang AC

amanda.chang@jpmorgan.com

Company Background

Business Overview

Founded in 1996 and listed on the TWSE in 2011, BizLink Holding Inc. is a leading interconnect solutions provider specializing in cables, connectors, and wiring harnesses across diversified end markets, including IT & Data Communications, industrial, automotive, and electrical appliances. The company operates a broad global manufacturing and sales footprint and has consistently expanded its capabilities and customer reach through M&A. The four major business segments include:

- **IT & Data Communications (42% of FY25 revenue):** The segment is composed of HPC and IT peripherals businesses, with growth mainly driven by AI-related HPC demand (HPC sales >4x in 2025 vs 2023). HPC includes power solutions (e.g. power whips, busbars), data interconnects (e.g. AEC, DAC, high-speed connectivity), and optical solutions (e.g. fiber patch cords, MTP/MPO assemblies), while IT peripherals include docking stations, hubs, and dongles.
- **Industrial (33%):** The industrial segment includes capital equipment, healthcare, factory automation and energy businesses, with capital equipment being the major growth driver recently. This business focuses on semiconductor equipment cable harnesses, box build, and system integration, with SPE sales more than doubling in 2025 vs 2023, supported by advanced node transitions and increasing EDS/FDS (Electrical/Fluid Distribution Systems) demand. Other segments cover medical imaging (e.g. CT/MRI), industrial automation connectivity, and energy solutions (e.g. storage and renewables applications).
- **Automotive (13%):** This segment is driven mainly by EV applications, focusing on high/low voltage BMS harnesses, with additional exposure to non-EV segments, such as powersports vehicles and truck container applications.
- **Electrical Appliances (11%):** This segment provides customized wiring and connectivity solutions for household and commercial appliances, including white goods, kitchen appliances, and office equipment, etc.

Table 17: BizLink's major business segments and applications

Segment	FY25 revenues %	Sub-segment	Major applications
IT & Data communication	42%	HPC	Power solutions: power whips, busbars Data interconnects: AEC, DAC, internal high-speed solutions (e.g. MCIO, PCIe cabling/ connectors)
		IT Peripherals	Docking, hubs, dongles, and USB-C applications
Industrial	33%	Capital Equipment	Semiconductor equipment cable harness, box build, system integration
		Healthcare	Medical device cables, imaging systems harness (e.g. CT (Computer Tomography) & MRI (Magnetic Resonance Imaging))
		Factory Automation	Robotics, industrial control connectivity
		Energy	Energy storage systems, renewable energy applications
Automotive	13%	EV	High/Low voltage BMS (Battery Management System)
		Non-EV	Wire harness for powersports vehicles and truck containers
Electrical Appliances	11%	-	Customized products covering white goods, kitchen appliances, professional copiers, etc.

Competitive Landscape

BizLink has diversified end-market exposure, and we benchmark the company against leading listed interconnect suppliers, complemented by specialized optical players such as T&S, to assess its competitive positioning across the interconnect value chain.

- **Sinbon (3023 TT, covered by Gokul Hariharan):** Sinbon is one of BizLink's closest domestic peers; both companies provide solutions such as cable and connector assembly across sectors including industrials, healthcare and energy, etc. However, BizLink has increasingly differentiated itself through greater exposure to AI infrastructure, while Sinbon remains more focused on industrial applications (31% of FY25 revenue). This difference in product mix has also supported BizLink's higher gross margin profile, reaching 32% in FY25 vs 24% for Sinbon.
- **Amphenol (APH US, covered by Joseph Cardoso):** Amphenol is the global leader in interconnect solutions, with active copper interconnects a significant business today and optical connectivity becoming an increasingly important growth driver. Its scale, technology leadership and comprehensive product portfolio support its higher gross margins (FY25 GM: 37%), whereas BizLink competes through customization ability, engineering flexibility and faster execution.
- **TE Connectivity (TEL US, covered by Manmohanpreet Singh):** TE Connectivity mainly focuses on automotive-related interconnect solutions, accounting for c.54% of its FY25 revenue. However, Digital Data Networks has been gaining momentum, supported by the company's expanding portfolio of high-speed connectivity solutions, including AECs, as well as optical solutions such as AOC assemblies and optical transceivers.
- **FIT Hong Teng (6088 HK, not covered):** FIT has maintained higher exposure to consumer electronics, resulting in a more commoditized product mix and lower gross margins (FY25 GM: 19%) than BizLink. However, leveraging the Hon Hai Group's vertically integrated manufacturing ecosystem, the company is growing its AI connectivity portfolio across copper and optical solutions (e.g. XPO products). FIT is also expanding into the power segment and has showcased power whip solutions supporting up to 400A, although BizLink currently still maintains a higher market share in this segment.

Amanda Chang AC
(886-2) 2725-9861
amanda.chang@jpmorgan.com

- **Luxshare (002475 CH, covered by Billy Feng):** Luxshare is one of China's largest interconnect manufacturers, with consumer electronics (particularly the Apple ecosystem) remaining its core business, while its gross margin of 12% was also lower than BizLink's in FY25. More recently, the company has been expanding into AI-related solutions, including the industry's first hybrid AEC/ACC cable with Marvell and 5,000A liquid-cooled busbars for NVIDIA's Vera Rubin platform. While Luxshare and BizLink are increasingly overlapping in selected AI connectivity applications, Luxshare leverages manufacturing scale, whereas BizLink focuses on customized, higher-value interconnect solutions.
- **T&S Communication (300570 CH, not covered):** T&S is a Chinese supplier of optical connectivity solutions, with a product portfolio spanning MPO/MTP, optical transceivers, AOCs and shuffle boxes, etc. Its close relationship with Corning strengthens its optical business, while its optical-focused product mix supports higher gross margins (38% in FY25) than BizLink. BizLink's strengths lie in its ability to provide integrated interconnect solutions across copper, power and optical technologies, while having an extensive global manufacturing footprint that enables close client collaboration and helps diversify geopolitical risks.

Financial Analysis

Revenue growth of 45%/50% YoY in FY26/27E

We forecast BizLink's revenue to increase 45%/50% YoY in FY26/27E, supported by robust growth in the HPC business and sustained momentum in the capital equipment segment. Our estimates also incorporate the consolidation of Interplex Datacom from 4Q26 onward, which we estimate to contribute c.US$100mn of quarterly revenue, based on its trailing 12-month sales of US$392mn as of Mar-26.

For the IT DataCom segment, we forecast revenue growth of 95%/82% YoY in FY26/27E, underpinned by 113%/85% growth in the HPC business, driven mainly by rising power demand and increasing content value. Data-related products should remain a solid revenue base, with AEC solutions growing 65%/34% YoY in FY26/27E, while optical connectivity products are likely to gradually ramp up from FY27.

We project the industrial segment to grow 14%/13% YoY in FY26/27E, led by 27%/26% growth in the capital equipment business amid the semi capex upcycle, alongside a recovery in factory automation demand, with revenue increasing 13%/6% YoY after a 5% decline in FY25. We also forecast the automotive segment to return to 8% growth in FY26E as end-market demand normalizes following two years of contraction.

EPS to reach NT$68/123 in FY26/27E with 46%/80% YoY growth

BizLink's 1Q26 gross margin declined to 28.8% due to temporary product-mix headwinds during platform transitions. We believe a gradual margin recovery, driven by the upgraded power products for the Vera Rubin platform, continued migration toward higher-value data connectivity solutions, and growing optical contributions, could support our gross margin forecast of 31.7%/34.7% in FY26/27E.

We estimate operating expenses to increase in 4Q26 following the completion of the Interplex Datacom acquisition, mainly due to integration-related costs, resulting in a cost-to-income ratio of 14.3% in FY26E. While the detailed funding structure remains undisclosed, we conservatively factor in higher financing costs, considering the potential use of bridge/syndicated loans, with interest expenses increasing 77%/41% YoY in FY26/27E.

Despite higher operating and financing costs associated with the Interplex Datacom acquisition, we forecast BizLink to deliver net profit growth of 47%/80% YoY in FY26/27E, supported by robust revenue growth and resilient margins. This translates into EPS of NT$68/123 and ROE of 27%/39% in FY26/27E, respectively.

Balance sheet and cash flow generation

BizLink's leverage increased following the acquisition of LEONI's INBG business in FY22, with net cash turning negative due to acquisition-related financing. However, the company has steadily deleveraged since then through strong internal cash generation, leading to a gradual improvement in its net cash position.

While we expect the acquisition of Interplex Datacom to increase leverage upon consolidation, we have not incorporated the balance sheet impact at this stage due to limited disclosure on the transaction structure details and the target's financials. Based on our assumptions of a maximum GDR issuance of 6mn shares and an ECB conversion price of NT$3,000, we estimate the announced GDR/ECB issuance in July 2026 may imply c.6% dilution. Although the final funding mix remains uncertain, we believe BizLink's strong profitability and healthy cash flow generation would support a manageable leverage profile if part of the acquisition is financed through debt.

Investment Thesis, Valuation and Risks

BizLink *(Overweight; Price Target: NT$3,100.00)*

Investment Thesis

We rate BizLink OW considering: 1) rising power demand and content value as AI platforms transition to VR200 and VR Ultra; 2) additional growth opportunities from the ramp-up of optical interconnect solutions and solid capital equipment business; and 3) strengthened competitive positioning through close design-in collaboration with NVIDIA and hyperscalers.

Valuation

Our Jun-27 PT of NT$3,100 is based on 23x of 12M forward EPS. The 23x valuation multiple is at the higher end of the 10-year trading range, on the back of a solid growth outlook thanks to rising exposure to high growth and margin-lucrative HPC and capital equipment business.

Risks to Rating and Price Target

Key downside risks to our rating and price target include: 1) market-share loss amid intensifying competition; 2) moderating AEC growth at higher data transmission speeds; 3) gross margin pressure during platform and product transitions; and 4) weaker-than-expected AI server demand and order growth.

Analyst Certification: The Research Analyst(s) denoted by an "AC" on the cover of this report certifies (or, where multiple Research Analysts are primarily responsible for this report, the Research Analyst denoted by an "AC" on the cover or within the document individually certifies, with respect to each security or issuer that the Research Analyst covers in this research) that: (1) all of the views expressed in this report accurately reflect the Research Analyst's personal views about any and all of the subject securities or issuers; and (2) no part of any of the Research Analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the Research Analyst(s) in this report. For all Korea-based Research Analysts listed on the front cover, if applicable, they also certify, as per KOFIA requirements, that the Research Analyst's analysis was made in good faith and that the views reflect the Research Analyst's own opinion, without undue influence or intervention.

All authors named within this report are Research Analysts who produce independent research unless otherwise specified. In Europe, Sector Specialists (Sales and Trading) may be shown on this report as contacts but are not authors of the report or part of the Research Department.

Important Disclosures

- **Market Maker/ Liquidity Provider:** J.P. Morgan is a market maker and/or liquidity provider in the financial instruments of/related to BizLink or related entities.
- **Beneficial Ownership (1% or more):** J.P. Morgan beneficially owns 1% or more of a class of common equity securities of BizLink or related entities.
- **Client:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients: BizLink or related entities.
- **Client/Non-Investment Banking, Securities-Related:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients, and the services provided were non-investment-banking, securities-related: BizLink or related entities.
- **Potential Investment Banking Compensation:** J.P. Morgan expects to receive, or intends to seek, compensation for investment banking services in the next three months from BizLink or related entities.
- **Non-Investment Banking Compensation Received:** J.P. Morgan has received compensation in the past 12 months for products or services other than investment banking from BizLink or related entities.
- **Debt Position:** J.P. Morgan may hold a position in the debt securities of BizLink or related entities, if any.
- **Gartner:** All statements in this report attributable to Gartner represent J.P. Morgan's interpretation of data, research opinion or viewpoints published as part of a syndicated subscription service by Gartner, Inc., and have not been reviewed by Gartner. Each Gartner publication speaks as of its original publication date (and not as of the date of this presentation or report). The opinions expressed in Gartner publications are not representations of fact and are subject to change without notice.

Company-Specific Disclosures: J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Important disclosures, including price charts and credit opinion history tables (if applicable), are available for compendium reports and all J.P. Morgan–covered companies, and certain non-covered companies, by visiting https://www.jpmm.com/research/disclosures, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

Source: Bloomberg Finance L.P. and J.P. Morgan; price data adjusted for stock splits and dividends.
Initiated coverage Oct 10, 2022. All share prices are as of market close on the previous business day.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, https://www.jpmorganmarkets.com.

Coverage Universe: Chang, Amanda : LINE Pay Taiwan Limited (7722.TW)

J.P. Morgan Equity Research Ratings Distribution, as of July 04, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	36%	12%
IB clients**	83%	80%	73%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	92%	87%

***Please note that the percentages may not add to 100% because of rounding.**
****Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.**
For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, http://www.jpmorganmarkets.com. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:
A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of http://www.jpmorganmarkets.com where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to UK MIFID Research Unbundling exemption for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Unless specified to the contrary, this material is distributed in the UK by JPMS plc and is directed in the UK only to: (a) persons having professional experience in matters relating to investments falling within article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) (Order) 2005 (“the FPO”); (b) persons outlined in article 49 of the FPO (high net worth companies, unincorporated associations or partnerships, the trustees of high value trusts, etc.); or (c) any persons to whom this communication may otherwise lawfully be made; all such persons being referred to as "UK relevant persons". This material must not be acted on or relied on by persons who are not UK relevant persons. Any investment or investment activity to which this material relates is only available to UK relevant persons and will be engaged in only with UK relevant persons. A description of J.P. Morgan EMEA’s policy for prevention and avoidance of conflicts of interest related to the production of Research can be found at the following link: J.P. Morgan EMEA - Research Independence Policy.

U.S.: J.P. Morgan Securities LLC ("JPMS") is a member of the NYSE, FINRA, SIPC, and the NFA. JPMorgan Chase Bank, N.A. is a member of the FDIC. Material published by non-U.S. affiliates is distributed in the U.S. by JPMS who accepts responsibility for its content.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.
