Bottom line: We hosted Fubon's IR team at our Asia Financials Corporate Day. Investor questions focused on 1) investment asset allocation and impact on P/L, 2) normalized ROE target, 3) recurring yield outlook, 4) life capital position, 5) rate impact and bank outlook, and 6) dividend. Fubon targets a 10% ROE on both a net profit and adjusted net profit basis, while believing that near-term support will be driven by strong YTD equity market performance. Backed by robust internal capital generation capabilities, Fubon remains confident in its capital position, and reiterates its target of 40-50% payout ratio, based on adjusted net profit (including equity realized gains and losses).

We are Neutral rated on Fubon. Our 12-month SOTP-based price target is NT\$96.0, implying 1.2X FY27E P/B and 10X FY27E P/E.

Key takeaways:

- Re investor questions on month-on-month profit volatility, Fubon attributed this to market-to-market of its FVTPL assets. The company explained that within the FVTPL assets, which is 10% of the investment book, c.2% is equity, while bond and private equity investments each account for c.4%. Most of the 2% equity allocation are short-term investments in domestic equity.
- Post the adoption of IFRS17, Fubon is targeting a 10% ROE on both net profit and adjusted net profit basis, underpinned by stable CSM release and positive investment spread. Company expects its near-term adjusted ROE to remain above 10%, driven by strong equity market performance, while investment strategy will pivot toward high-dividend stocks to secure stable recurring income over the longer term.
- Recurring yield was lower yoy in 1Q26, reflecting a negative FX translation impact and a strategic focus on capital gain during the quarter. Fubon expects FY26 recurring yield to be similar to FY25, and total investment yield to surpass FY25 level, given strong equity investment gains YTD.
- Fubon applied for a 140% TIS ratio under the new capital regime, near the high

Goldman Sachs does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. end of its previous 120–150% guidance range. This implies a larger capital consumption in the first 5 years, but Fubon is confident of its internal capital generation, driven by steady CSM releases and recurring income growth. In addition, Fubon believes it could afford a shorter transition period (15 years) for full TIS adoption.

- For Fubon Bank, company already upgraded NIM guidance from mid-single digit to mid-to-high single digit, reflecting better-than-expected NIM improvements. Cost-to-income ratio was 39.7% in 1Q, and the company aims for improvements vs. FY25.
- Further regulatory guidance on life insurance dividend upstream is still pending, but Fubon is confident that its strong balance sheet position should fulfill regulatory requirements. Fubon highlighted that Fubon Life secured regulatory approval to upstream capital to the holding company over the past two years. Regarding its dividend policy, Fubon aims to maintain a stable payout ratio at 40–50%, based on adjusted net profit (including equity realized gains and losses).

Price Target Risks and Methodology - Fubon FHC

We are Neutral rated on Fubon. Our 12-month SOTP-based price target is NT\$96.0, implying 1.2X FY27E P/B and 10X FY27E P/E.

Upside risks: a strong upgrade in future dividends could drive further narrowing of its valuation discount vs. bank-centric names, which need the support from increasing life earnings and BS strength on robust domestic equity market. Other upside risks include equity market rally, a stronger USD and decline in hedging costs.

Downside risks: 1) prolonged period of high hedging cost, as a result of the interest rate gap between Taiwan and US, and/or sustained appreciation in NTD vs. USD and other major Asian currencies; 2) stringent regulatory scrutiny ahead of IFRS 17 implementation in 2026, which could potentially affect Fubon Life's ability to upstream dividends, and/or Fubon FHC's ability to distribute profits through dividends; 3) potential liquidity constraint if surrender increases significantly.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.
