

As climate risks have a larger impact on supply chains, the need to finance resilience-building initiatives is increasing. Banks have an important role to play by expanding their financing toolkit, while companies with proactive resilience strategies can gain greater access to capital

Climate and weather-related shocks are a growing source of supply chain risk. In August, the Rhine River's water levels hit a record low since 1880, hindering trade flows across Europe. In 2024, Hurricane Helene affected global tech and medical supply chains by flooding key ultra-pure quartz production facilities in the US. The upcoming ["very strong"](#) El Niño could substantially disrupt temperature and precipitation patterns across the globe next year, putting, for example, food production and trade at risk.

These events underscore the need to build supply chain resilience. Extreme weather is now a more impactful part of the supply chain

risk landscape alongside geopolitics and other risks.

Yet significant gaps remain. First, while the awareness of supply chain climate risks is rising, many companies have [yet to acknowledge their financial materiality](#). Second, the uptake of financing solutions has not kept pace with supply chain resilience needs, despite trade finance supporting around 90% of global trade. This leaves financial institutions well positioned to expand financing solutions that support corporate supply chain resilience. Below is how they can do it.

Expanding banks' toolkit for supply chain

- The traditional supply chain and trade finance solutions can be tailored to integrate resilience objectives. For example, guarantees can support cross-border trade in climate-resilient goods, while preferential financing terms can reward companies that actively manage supply chain risks. By incorporating supply chain risk assessments into financing programmes and linking working capital solutions to supplier resilience, these products can help companies better withstand disruptions and support long-term growth.

- **Climate and resilience tech finance**

- Banks can provide financing and advisory services to help scale and deploy technologies that strengthen supply chain resilience. Examples include water management technologies, regenerative agriculture, and indoor farming. These solutions can improve the upstream supply chains of industries such as food, beverage, and hospitality. As interest in resilience technologies grows, financial institutions are increasingly developing tailored financing solutions to support their adoption.

- **Blended finance**

- Some resilience technologies, projects, and markets may

As banks work to expand their financing offerings to enhance supply chain resilience, companies would benefit from doing their part as well. My colleague Rico Luman has [written about](#) some best practices companies can adopt in their day-to-day operations. These include building up inventory of high-risk supply materials, diversifying suppliers and transport routes, and improving supply chain visibility. Financing solutions that link resilience to working capital, for example, can help companies strengthen these efforts.

Companies can also look beyond day-to-day operations and invest in longer-term resilience initiatives, such as climate-resilient materials, water management technologies, and other adaptation
