

摘要：

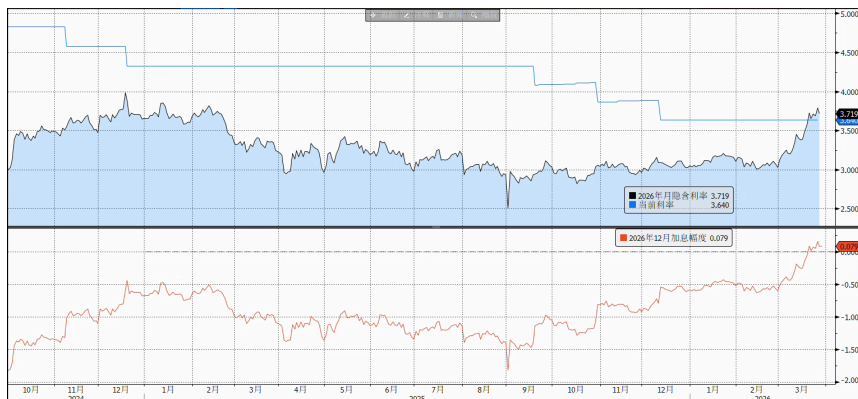

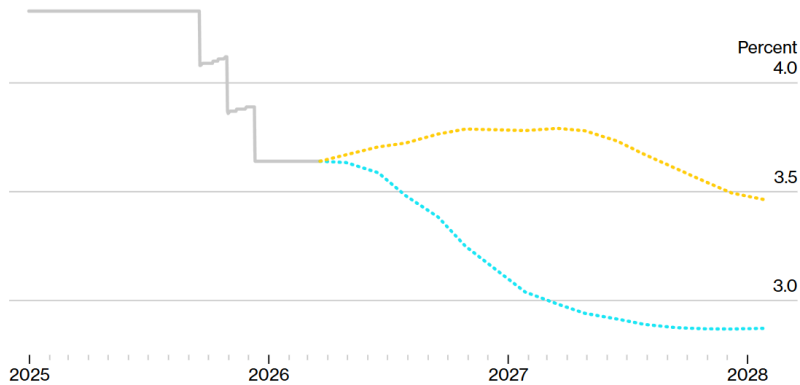

能源冲击推升通胀预期，市场激进定价加息风险，或已偏离基本面并孕育反转机会。

自2月底中东冲突升级以来，一场史诗级的能源冲击席卷全球。霍尔木兹海峡航运受阻、波斯湾能源设施遇袭，导致能源供给严重受损，油气价格飙升，全球通胀预期迅速反弹。受此影响，全球主要央行的政策预期经历了戏剧性的暴力重构。

美联储的政策路径预测

自2月底以来，利率已由降息转为上调。

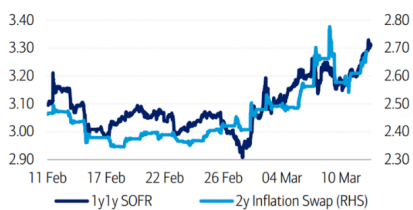

March 26 Feb. 27 EFRF

仅在一个月前，市场还在定价美联储年内降息2-3次；而随着能源冲击引发通胀担忧快速升温，市场也迅速切换至计入加息甚至紧急加息的尾部风险。OIS市场已将美联储在今年12月前加息的概率定价在50%左右；而与SOFR挂钩、押注美联储两周内加息的交易需求激增。

Exhibit 3: 1y1y SOFR pricing has moved in-line with short term inflation expectations in the last 30 days

1y1y SOFR (%) LHS vs 2y inflation swap pricing (%), RHS) since 11 Feb 2026 in 15min increments

BofA GLOBAL RESEARCH

Figure 1: Market pricing of a Fed rate hike this year is elevated

Hike probabilities from SOFR put options

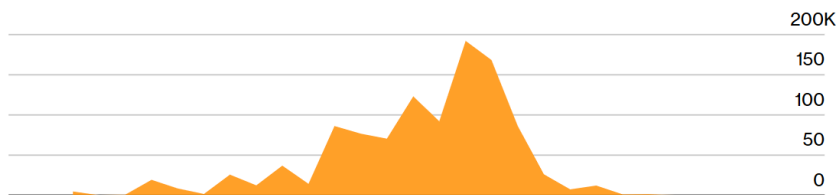

Source: Bloomberg Finance L.P., Deutsche Bank Research. *Hike probabilities are derived from 26.125/96.0025 SOFR put spreads. Based on SOFR futures pricing and assuming that FOMC is unchanged vs. the Fed's target range and the effective fed funds rate continues to print 2bp below IORR, these spreads should pay off 6.25 cents if the Fed hikes by the indicated meeting and zero otherwise.

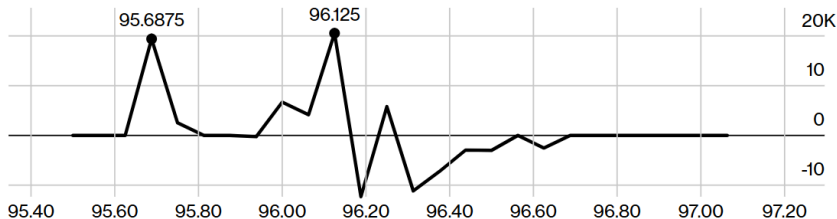

SOFR 4月看跌期权未平仓合约

交易员正在增加美联储加息溢价保护

3月26日未平仓合约

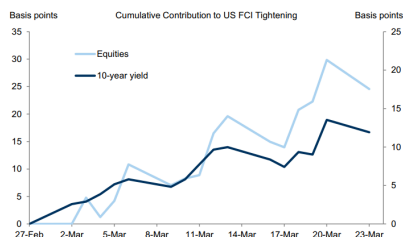

未平仓利率周变化

全球债券市场也遭遇剧烈抛售，美债各期限收益率大幅上行，收益率曲线呈现出显著的熊市平坦化特征。利率定价急剧转向，反映出市场对再通胀风险的重新计价，已对资产价格形成系统性冲击：债券市场大幅调整，股票与信用资产承压，跨资产相关性显著上升。

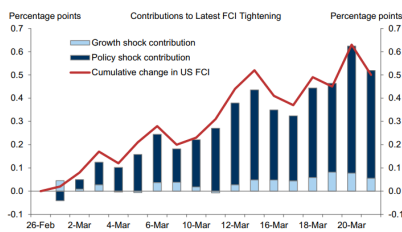

更重要的是，在美联储尚未行动的情况下，金融条件已显著收紧。短端利率快速上行直接推高融资成本，叠加收益率曲线调整，对企业投资与居民消费形成前置约束。这意味着，即便美联储维持利率不变，市场本身已在替代加息。

与此同时，市场预期与美联储指引及官员表态之间出现显著背离。一方面，交易员在利率市场中激进定价加息风险；另一方面，美联储指引与官员仍倾向于“更长时间维持利率不变”，甚至保留年内降息的可能。这种预期分歧本身，反映出当前定价中包含较高的情绪与尾部风险溢价。
