EQUITY: FABLESS

Riding the next megatrend of SoIC; maintain Buy

Several key CSP projects in the pipeline to support growth until 2028-29F

Benefiting from SoIC — the next megatrend in advanced packaging, in our view

GUC shares have rallied ~100% since late July (vs the TAIEX up 11%), driven by a strong wave of consensus earnings upward revisions (*Fig. 11*). This is largely in line with our observations highlighted in our 2 Aug *report* that "consensus expectations were way too low." We believe the Street is starting to acknowledge that there is a strong pipeline of CSP projects over the next 2-3 years, including Google CPU (GOOGL US, Not rated; revenue sharply higher in 2026 with momentum potentially sustaining into 2027F and 2028F as Axion 3 doubles silicon content from Axion 2), as well as the other top three US hyperscalers' ASIC and CPU projects along with Tesla's (TSLA US, Not rated) AI5/AI6.5. GUC not only has secured projects from top US hyperscalers, but at the same time acquired additional meaningful customers with volume globally, e.g. China auto ASIC and US AI ASIC using a SoW approach. However, among all, the one that has caught our attention the most is the Google TPU v.10 compute die opportunity (though we believe the turnkey deal is yet to be finalized) — not only because the addressable size could be significant, but this business opportunity might originate from GUC's G-link 3D die-on-die IP. (*Fig. 1 Fig. 4*) We raise our 2026-28F EPS for GUC by 15%-37% to incorporate business upside from non-Axion projects, and raise TP to TWD9,600 (from TWD5,800), based on an unchanged 40x target P/E, while rolling forward valuation to the 2027-28F average EPS. We are yet to incorporate overseas convertible bonds (ECB) in our model/EPS estimates.

The rising importance of SoIC in advanced packaging should benefit GUC, given its leading investments in Glink-3D die-on-die IP among design service peers

SoIC is not new, but it was small before 2026 given limited adoption by AMD MI300 chip (AMD US, Not rated) and Apple M-series chip (AAPL US, Not rated). In 2026, nVidia's (NVDA US, Not rated) demand for CPO using TSMC's (2330 TT, Buy) COUPE (EIC on PIC stacking) has further lifted SoIC demand. In our *June anchor report*, we noted that nVidia's Feynman could become the first GPU-on-GPU stacking SoIC (along with SiC carrier) AI chip. Since then, several US CSP ASIC projects have also planned to enable SoIC die stacking in their chip roadmap, according to our industry checks. GUC's Glink-3D IP (see *Fig. 1* - *Fig. 4*) appears well positioned to ride this trend as it has developed this IP along with TSMC's roadmap and currently a number of CSPs are using its IP to build their test chip – which in the long run could prove to be a good stepping stone for GUC to win more services, in our view. Besides, GUC's SoIC IP would also be deployed with TSMC's scale-up CPO customers (e.g. AyarLabs, *Fig. 5*).

Company profile

Established in 1998, GUC is one of the leading design service companies in Taiwan with self-developed IPs. TSMC is GUC's single-largest shareholder with a 35% share.

Valuation Methodology

Our TP of TWD9,600 is based on 40x 2027-28F average EPS (40x P/E is its historical mid level). The benchmark index for the stock is TAIEX.

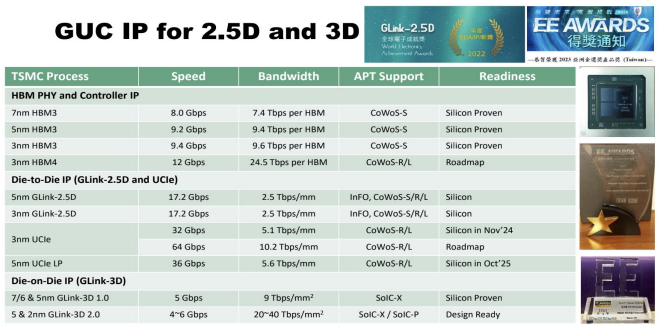

Risks that may impede the achievement of the target price

Downside risks include 1) fierce ASIC competition, 2) slowdown of key projects and lack of capacity, and 3) more insourcing trend from customers

ESG

GUC has six major ESG strategies to achieve the goals of sustainable development, including corporate governance, innovative R&D, partnership prosperity, environmental sustainability, friendly workplace, and social participation.
