

摘要：

Meta CEO扎克伯格发文回应前沿AI安全争议，反对将行业整体放缓作为主要解决方案，主张引入独立评估机构和外部顾问，将安全审查嵌入日常开发流程。他以Meta旗下AI工具Muse为例称，公司曾因安全问题推迟产品发布，但并未要求其他企业同步放缓。

围绕前沿AI是否应放缓开发的争论持续升温。

周三，Meta首席执行官马克·扎克伯格在X平台发文，首次公开回应这一争议，**表示AI实验室应引入独立评估机构和外部顾问，将安全审查纳入日常开发流程，并称这是“行业最佳实践”。**

这一表态与Anthropic首席执行官Dario Amodei此前提出的“放缓”思路形成差异。Amodei上周末呼吁适当放缓最先进AI系统的开发，以便研究人员获得更多时间评估潜在风险。OpenAI首席执行官Sam Altman及马斯克随后表达支持，英伟达首席执行官黄仁勋则在同日强调，AI安全首先是工程问题。

Last month I wrote about how we can build a positive and safe future for everyone: meta.com/thefutureisfor...

Every lab has the responsibility and incentive to move at the pace required to train its models safely, and the ability to take its own actions to ensure that happens.

The reality is:

- People won't want to use agents that are misaligned with them and that don't do what they ask, so labs have a strong natural incentive to make their models more aligned.

There is a lot of debate about slowing progress on capabilities until alignment catches up. My view is that trust and alignment are quickly becoming the most important capabilities that will differentiate agents and models. Any lab that doesn't focus on alignment will fall behind.

- Labs face significant liability if their models cause harm, so they have a strong incentive to prevent this as well.

Meta delayed shipping Muse for several months to focus on safety and security. We didn't call for everyone else to do this before we would. We just did it as part of our day-to-day work because it was clearly the right thing for people and for us. I'm proud of the security foundations we've built.

- Engaging independent evaluators and advisors is industry best practice. MSL already does this today in several areas because it helps produce better work. Other labs can just do this too. In general, it would be helpful for there to be a larger and more diverse ecosystem of evaluators.

扎克伯格以Meta旗下AI工具Muse为例称，Meta此前曾因安全与保障问题将Muse的发布推迟数月，但并未要求其他企业同步放缓，而是将安全审查作为日常开发流程的一部分。

黄仁勋也持类似观点。他表示安全是AI开发的“第一要务”，但无需通过新增法律或监管来解决。“我们不需要新法律，不需要新监管。”他认为，企业可以通过测试、评估和安全验证降低风险，市场力量也能形成约束。

黄仁勋同时反对将安全与开发速度简单视为二选一，认为企业可以在推进创新的同时控制发布节奏；如果产品存在明显安全风险，则应暂停并解决问题。

Altman立场趋于温和，市场关注监管影响

Altman此前支持Amodeli关于适当放缓前沿AI开发的主张，但最新表态更为温和。他表示，对AI行业在避免重大危害的前提下继续推进技术发展“非常有信心”，同时确认OpenAI正与Anthropic及谷歌DeepMind开展AI安全合作。

Altman还表示，不认同将当前争论简单概括为“放缓vs.推进”，并强调各家公司应具备独立推进安全改进的能力。

目前，AI企业对加强安全治理本身并无明显分歧，争议主要集中在是否需要放缓开发，以及安全治理应更多依靠企业自律还是外部监管。

这一分歧也开始受到资本市场关注。投资者担忧，如果监管协调进一步强化，可能影响AI模型开发节奏，并传导至算力需求、数据中心建设以及芯片企业资本开支；若行业主要采取内部治理和第三方评估路径，相关投资节奏则可能相对稳定。
