Investment: Residential

- We have made no major changes to the forecast and maintain our view that residential investment will remain a drag on growth over the next several quarters.

Affordability remains a significant constraint for the residential sector. Over the past several weeks, mortgage rates have ticked higher on the back of the Iran war and its potential effects on inflation and monetary policy. The recent leg-up in financing costs will likely keep home buying activity subdued. In terms of residential construction, building permits have generally trended lower so far this year, which points to a downshift in single-family construction as builders rebalance inventory with more moderate sales. Multifamily activity may see a modest lift as financing costs ease and apartment conditions firm. Meanwhile, recent firming in building material store retail sales indicates that home improvement spending may be starting to recover, though continued low housing turnover and material inflation remain limitations.

Investment: Nonresidential Structures

- We have not materially altered our outlook for nonresidential structures investment. There are pockets of growth, but overall spending remains weak.

Nonresidential construction is likely to remain in low gear this year. In addition to elevated interest rates constraining new project starts, higher energy prices have introduced new cost pressures. We do see several pockets of growth ahead. Higher oil prices should support energy-related investment through increased drilling activity. At the same time, the AI-driven infrastructure buildout and reindustrialization efforts should underpin strong growth in data centers, power, and manufacturing projects. That noted, new commercial construction starts remain low so far this year, indicating that spending within these categories will remain subdued and keep total structures investment running at a slow speed.

Net Exports & Trade

- International trade flows remain incredibly volatile month-to-month. We have not materially adjusted our outlook and continue to anticipate a modest widening in the trade deficit over the course of the year.

Continued tariff uncertainty and a high-tech domestic investment prioritization are driving trade flows and causing volatile demand. Imports were strong through the first quarter and suggest a further widening in the trade deficit into Q2, but we will refine our estimate as the data comes in given recent volatility. U.S. Customs and Border Protection has started the IEEPA tariff refund process with money already on the way to businesses. We continue to anticipate refunds will act as profit-margin protection for firms rather than have a stimulative effect on growth and expect the administration to try and re-implement tariffs in late July under other legislation once the current 10% universal tariff expires. Tariff rates should thus remain near current levels.

Labor Market

- We made no material changes to our labor market forecast.

Recent data still point to a low-hire, low-fire labor market. Layoffs remain contained outside the tech sector, but there are few signs that demand for new workers is improving with job openings continuing to move sideways and hiring announcements down from last year. Without stronger labor demand, low layoffs alone are unlikely to deliver a durable pickup in job creation. We expect nonfarm payroll growth to average around 55K per month over the balance of the year, compared to 76K the past four months. The more modest pace of job gains should coincide with the unemployment rate drifting up to 4.4% in Q3, where it is likely to hold through year-end. With hiring subdued, we suspect compensation growth will cool a bit more and look for the ECI to subside to 3.3% year over year in Q2.

Inflation

- We raised our inflation outlook modestly. We now look for core PCE inflation to end the year at 3.1% on a Q4-over-Q4 basis, up from 2.8% previously.

Higher energy prices are beginning to seep into other categories. Beyond prices at the pump, food inflation is set to strengthen later this year as transportation costs and other agriculture-related input prices rise. Core inflation is also likely to run hot in the near term, led by airfares and high-tech goods related to the AI buildout. These pressures should be partly offset by continued cooling in shelter costs and fading tariff-related increases. But on net, we expect core PCE inflation to peak at 3.5% in Q2 and end the year at 3.1%, as disinflation outside housing has become harder to come by.

Source: U.S. Department of Commerce and Wells Fargo Economics

- We have modestly increased our budget deficit forecast to \$1.95T in FY 2026 and \$2.00T in FY 2027, up from \$1.78 trillion in FY 2025.

We expect a wider federal budget deficit due to the combination of softer tariff revenues following the rollback of IEEPA tariffs, potential refund outflows to businesses, and a potential supplemental defense spending package tied to the ongoing Middle East conflict. While risks to more defense spending have risen, any increase is likely to be relatively small and phased in over time, limiting the near-term impact in 2026. Section 122 tariff authority remains the key swing factor, with refunds and lower ongoing revenues expected to drive a modest widening in the deficit in the near term. Overall, fiscal policy should not materially alter the outlook, and we expect Fed policy to continue to be the primary driver of rates.

Monetary Policy & Interest Rates

- We have pushed our expectation for the Fed's next cut to Q4 and now look for the FOMC to lower its target range by 25 bps in October and December, still followed by an extended hold at 3.00%-3.25%. Our year-end 10-year Treasury yield forecasts remain unchanged at 4.25% in 2026 and 4.30% in 2027.

The FOMC remains in wait-and-see mode. The labor market is resilient enough that policy easing is not urgent, especially with core inflation still running near 3%. At the same time, growth has fallen short of warranting further tightening, and policymakers are unlikely to be seriously contemplating rate hikes. The Committee appears to retain a modest easing bias, though that bias is increasingly tenuous. If the labor market holds steady, energy prices remain elevated, and inflation fails to improve, the Fed could drift toward a more neutral stance. Still, we continue to see the next policy move as a cut, rather than a hike.
