The margin beat in 2Q26 should help sentiment and points to more upside for business fundamentals and the share price. We raise our PT to NT\$450 (38x 2027e P/E) and remain OW.

2Q26 earnings beat on better GM: Off revenue of NT\$7,508mn (+18% QoQ/+27% YoY), gross margin improved by 2.2ppt QoQ to 34.2%, surpassing MSe at 32.4% and consensus at 33.3%, mainly driven by higher utilization and price hikes during the quarter. Opex was largely in line at NT\$1,531mn (opex ratio 20.4%), leading to operating profit at NT\$1,034mn (operating margin 13.8%), 19% above MSe at NT\$867mn (OPM 11.6%) and 9% above consensus at NT\$948mn (OPM 12.9%). With narrower non-op gains of NT\$46mn, NP came in at NT\$848mn (EPS NT\$2.40), 18% above MSe and 5% above consensus at NT\$721mn (EPS NT\$2.04) and NT\$804mn (EPS NT\$2.27), respectively.

Momentum sustained into 2H26: Delivery lead time has further lengthened to ~6 months for ball screws (vs. prior 4-5 months) and 4-5 months for linear guides (vs. prior ~4 months); this is a good indicator for solid demand. Management indicated that industrial automation, semiconductor and AI-related infrastructure builds are the major demand drivers this year. Specifically from the AI capex cycle, Hiwin is riding tailwinds of capacity expansion from mechanical component suppliers in the rack, thermal modules, connector, etc. space. We expect revenue to grow QoQ in both 3Q26 and 4Q26, with margins also expanding vs. 2Q26. Moreover, if the demand remains at a buoyed level, we think Hiwin might have the bargaining power to further raise its selling prices in the coming quarters.

Robotics remains key focus: Hiwin continues to see growth in its robotics segment, especially from wafer transport systems and some small volume shipments for logistics robots. 1H26 segment revenue grew 59% YoY to account for 12% of revenue (9% in 2025), and we expect the mix to rise in the coming years.

Stay OW: We believe the better-than-expected margins in 2Q26 should help sentiment. As we mentioned previously, Hiwin tends to benefit from both revenue growth and margin expansion in an upcycle, and numbers now point in that direction. We remain constructive and raise PT ~13% to NT\$450 (38x 2027e P/E).

Valuation Methodology

Price target – NT\$450 (from NT\$400 previously): This is our base-case scenario value, derived from a target P/E multiple of 38x (37x previously) to our 2027 EPS estimate. We lift our target multiple to reflect its strong outlook amid an upcycle. We view 37x P/E as reasonable, in line with the peak cycle valuation range of 35-40x. It is also supported by the 47% earnings CAGR we project for 2025-28.

We believe P/E methodology better captures the earnings growth momentum for industrial automation component participants, as market sentiment tends to move in line with business cycles.

Bull-case scenario value – NT\$600 (from NT\$535 previously): We apply a 51x P/E multiple (50x previously) to our 2027 base-case EPS estimate. This scenario reflects stronger demand amid an industrial automation up-cycle, together with earlier-than-expected contributions from the humanoid business, which could drive faster top- and bottom-line growth over the coming years.

Bear-case scenario value – NT\$190 (from NT\$170 previously): We apply a 16x P/E multiple (unchanged) to our 2027 base-case EPS estimate. This scenario reflects a weaker macro environment that could lead to slower capex across sectors, weighing on demand for industrial automation components.

Strong business outlook with continuous margin expansion

PRICE TARGET NT\$450.00

Base case, P/E. We think this valuation methodology better captures Hiwin's earnings growth momentum, as its valuation tends to move with the business cycle. We apply a target multiple of 38x to our 2027 EPS estimate. We view this multiple as justified by the 47% operating profit CAGR we project for 2025-28.

OVERWEIGHT THESIS

- We see Hiwin's business outlook improving, with delivery lead times extending to 3-4 months and momentum likely to be sustained over the next few quarters. Margins should expand on better utilization as customer demand improves, alongside price hikes of 7-15% from late March/early April to offset higher material costs.
- Demand from the tech sector remains solid, including components, assembly, and semiconductors, driven by the AI capex cycle and new form factors in consumer electronics.
