Given the level of uncertainty in energy markets this year and with little sign of a change going into next year, any call on energy markets for 2027 is a low-conviction call. But here are our 3 calls for energy markets for 2027

How to read our three calls for 2027

Source: ING

ING's base call: Brent to average $77/bbl next year

Oil markets have been on a roller coaster this year given events in the Middle East. However, we are going into year-end with oil flows from the region near pre-war levels despite the lack of a deal between the US and Iran. While oil flows are normalising, the way oil is coming out of the region is anything but normal, which is reflected in the surge in tanker shipping rates, given the very inefficient oil flows.

Our base case assumes occasional flare-ups between the US and Iran, meaning a full normalisation of Persian Gulf supplies remains some way off and the oil market is likely to retain a degree of risk premium. However, provided there are no significant or prolonged disruptions, we expect the market

The most likely candidate to leave OPEC is Venezuela, with the US's growing influence over the Venezuelan oil industry following the capture and arrest of President Maduro at the start of 2026. But we believe that some Persian Gulf producers may also question their membership, particularly if disagreements emerge over the capacity numbers used by the group to set production targets. Iraq has already made noise around production targets, and following the exit of the UAE, some members may be looking at them enviously, with the UAE pumping record volumes of crude since leaving the bloc.

Our bold call: TTF to trade sub-€40/MWh before the end of next year

European gas prices have strengthened significantly in 2026. But what goes up must come down, and we believe prices could fall sharply next year. There are clearly plenty of assumptions here, most importantly a normalisation of Persian Gulf LNG flows in early 2027. If that happens, we believe TTF could trade below €40/MWh by end-2027.

On the demand side, higher prices are already driving some industrial demand destruction, while we are deep in the gas-to-coal switching range. Furthermore, El Niño could bring milder weather to
