Introducing UBS Global Data Centre Central

We are launching the first edition of the **UBS Global Data Centre Central** — a new, centralised product bringing together our key research, insights and newsflow on the Data Centre / AI theme. The aim is to provide a one-stop shop for investors to track the fast-evolving AI infrastructure landscape, spanning technology, power, cooling and the rest of the value chain of listed and private market participants.

What is key in the today's inaugural piece?

- We introduce our comprehensive **UBS Global Data Centres Coverage Map**,
- Examine step up in **800VDC-related announcements** (eg. Siemens & Schneider),
- Launch **valuation tracking across the AI/data centre ecosystem**

We plan to build out this report over time and welcome feedback. For further details on our Data Centres market model and key research pieces, please refer to our recently published [Data Centre Primer](#).

We have seen an increased amount of strategic announcements and newsflow on 800VDC architecture over the past few weeks. We did detailed analysis on this during our [Data Centre World](#) trade fair visit earlier this year - see Figures 1 & 2 for the schematics of three stages of future set-up.

- **Bottom line.** The rate of announcements and technologies developments in the 800VDC / Solid state space has clearly stepped, confirming that there is a race between the key current technology vendors. We expect product launches and production starts newsflow to continue to drive differentiation between the electrical equipment suppliers this year and see Data Centre World expo in Singapore at the end of September as the key catalyst. Based on developments so far, we think Delta Electronics is leading this space, followed by ABB and Siemens while in the past Siemens's capability in 800V space was slightly underappreciated by the market (vs clear progress in solid state circuit breaker as per Infineon supply agreement). While Schneider has some content that can come under pressure (eg UPS), we are reassured by its positioning in reference architectures with NVIDIA and latest manufacturing agreement of standardised modules with Foxconn (details inside). We have some concerns over Legrand's portfolio and the likely migration of in-rack power distribution units to side-car PDUs. We believe the company will have to back up its existing defensive message on this topic with launches new products directly addressing the new architecture at DC World expo in September (where it will also be hosting a CMD on 29th).
- **Stock views:** In our European Capital Goods coverage, in terms of level technology progress positioning, our view is **ABB > Schneider / Siemens > Legrand** and our top picks in this space are **Siemens** and **Schneider** (both Buy rated). With respect to our U.S. coverage, we remain positive on all industrial companies exposed to AI infrastructure investment, with our preference reflecting quality of execution on the expected growth. We expect content per MW to increase across the board as more power delivery is required to the rack. **GE Vernova, Eaton** and **Vertiv** appear best positioned to us with respect to 800VDC dynamics. GEV solid state transformers are being so-funded by a hyperscaler customer, and we expect testing to start in September followed by commercialization about 6 months after that. In Asia, we continue to see **Delta Electronics** well positioned over the next few years (detailed feedback inside).

DATA CENTRE 800VDC ARCHITECTURE LOOMING

Key recent developments

- **Implications from Siemens-Infineon announcement** on supply of silicone carbide power modules for semiconductor circuit breaker SENTRON 3QD2 ([link](#)). We see this as in fact a relevant positive for Siemens as it confirms its strong positioning in the solid state (semiconductor) technology for low voltage power distribution along with ABB, while Schneider appears to focus more at the systems level. Solid state circuit breaker has interesting implications for market share and \$/MW development as while it commands a price point of 5-10x of a traditional breaker, it also replaces an assembly of other components (fast semi fuse, arc-flash mitigation, sensors, relays etc) with overall \$/MW likely rising 10-30% but also concentrating the whole system under one vendor.
- **Schneider announced strategic collaboration with Foxconn** to develop reference architecture for AI data centre. This will focus on standardisation and developing "modules" combining Foxconn's advanced compute and manufacturing expertise with Schneider's expertise in power, cooling energy management. Production will start this year we think it will like be at sidecar / rack level.
- **Computex 2026 data center power: Pathway to 800VDC ([link](#))**. Our Taiwan colleagues view power infrastructure increasingly emerging as a critical value capture point within AI scaling as IT racks and data centers scale up power density and total capacity to enable AI training, inference and agentic workloads at scale. They see Vertiv an earlier mover in row/facility level power delivery, Delta leading in power racks. Delta already shipping SST in China alongside early sampling in SOFC (solid oxide fuel cell) deployments.

Fundamental differences between 800VDC vs current 400/480VAC architectures

800V DC is emerging as a structural shift in data centre power architecture, driven by rapidly rising rack densities that are pushing traditional low-voltage AC systems to their limits. By increasing voltage, operators can reduce current for a given power level, which lowers copper usage, reduces heat losses and improves efficiency—effectively enabling continued scaling toward several hundred kW and ultimately MW-class racks.

Architecturally, this implies a move from distributing low-voltage AC across the facility to rectifying power earlier and distributing high-voltage DC, with conversion happening closer to the chip. This reduces the role of low-voltage AC switchgear and PDUs, while increasing the importance of DC distribution, protection and power electronics. Medium-voltage infrastructure remains in place, and UPS evolves rather than disappears, shifting toward lithium-ion and more distributed configurations.

Adoption is expected to be phased. Near-term solutions (e.g. sidecar or centralized DC architectures) focus on supporting higher rack density while leveraging existing supply chains. Over time, the industry is likely to move toward more fully DC-based systems incorporating solid-state transformers and advanced DC-DC conversion. However, multiple architectures are likely to coexist for an extended period, suggesting a gradual transition rather than a rapid, standardised shift. The efficiency benefits are meaningful but incremental, with savings driven by fewer conversion steps and lower copper intensity, partially offset by greater spend on DC switchgear, controls and protection. The transition also introduces new technical challenges, including insulation, safety and EMI management, increasing system complexity.

From a vendor perspective, the shift primarily drives a mix change. Exposure to high-voltage systems, DC distribution and advanced power electronics becomes increasingly valuable, favouring players with strong capabilities in these areas. Conversely, pure low-voltage AC exposure faces structural pressure unless offerings are expanded up the voltage stack. Overall, 800V DC represents an evolution of the electrical architecture, redistributing value toward higher-voltage, more integrated and more software-enabled solutions rather than reducing total addressable spend.

KEY RESEARCH AND NEWSFLOW

These are the key research pieces on DC theme recently published across our global team:

- Munters Initiation ([link](#))**. We think Munters is a high-quality secular growth story, well positioned in the data centre cooling market (c.60% of EBITA). We forecast c.18% organic CAGR and 400bps margin expansion over 2026–28E. We initiate with a Buy rating, with earnings set to double over 2026–28E, driven by (1) strong DCT growth (UBSe +40% / +33% / +13%) and (2) 400bps margin expansion from self-help and operating leverage. See the note for a lot of unique analysis on DC & liquid cooling market, Chillers & CDU product benchmarking and capex revision signal analysis for AirTech.
- Computex - Feedback on Delta Electronics and hardware supply chain ([link](#), [link](#))**. We would note lead time constraints on power/passives are limiting it and Delta Thailand's Q226 to low-mid teens QoQ growth vs. original 20%+ expectations but see sales accelerating in H226 on continued strong pull for Blackwell and ramps of ASIC servers into Amazon and Google, with Rubin more into Q426 after the 1-2 month delayed start to mass production to change the heat spreader design. We also note its peer Lite-On continues to stay on track booking 68% of street +15% QoQ in Q226 and maintaining its +70% YoY growth for its cloud AI power business. For the transition to HVDC, vendors are still expecting 20-30% of rack shipments in the next year could convert to side power rack even for Rubin and do not see an issue of conversion loss from 480V AC to 800V DC, with Delta advertising manageable 2% conversion loss and then would save on busbar cabling into the rack. ASIC suppliers are still going ahead with 400V DC and with their customization work is a fairly similar step-up in content for the power supply vendors still upgrading to power rack for the AC-DC conversion and additional DC-DC conversion to step down the voltage in the rack. We did note in our Computex conclusion ([link](#)) that some suppliers see potential push-out of NVIDIA's Kyber rack architecture originally intended for Rubin Ultra out to 2028 with weekly modifications increasingly centered on keeping a modified version of the NVL72 Oberon design for Rubin Ultra for the H227 launch. That transition could moderate the scale-up of wattage per rack for NVIDIA with Rubin Ultra to a modest step-up (from our prior 2x expectation since GTC San Jose with 288 dies in Kyber) although we expect increasingly through 2027-28 more side power racks and possibly the in row power center rectifiers to simplify the IT rack design and continue to rise in adoption. We still see strong runway the next few years transitioning toward power side air bundling in higher content (battery back-up, capacitor back-up and DC-DC conversion) and early start on solid state transformer shipping small volume to a China CSP and fuel cell 30-50MW mini-line starting from mid-2027 with Taiwan site capacity to reach 1GW+ if commercialization goes well.
- Token Costs – What Customers are Saying ([link](#))**. Are you token maxxed out yet? The conversation around AI feels like it's shifting from hype to economics in real time. Bain shows nearly 40% of companies are realizing <10% of expected savings, while our latest work highlights that ~60% of enterprises are already concerned about token and compute costs, with guardrails now being introduced across the board. But this doesn't look like a pullback — quite the opposite. Adoption is still ramping, with companies cutting elsewhere in IT to fund AI, reinforcing that cost pressure is emerging alongside usage, not replacing it.
- Halma Photonics update ([link](#))**. Making up ~20% of group revenue, Photonics remained the key focus at Halma FY26 results, with growth of ~52% in FY26 and a guided further ~30% in FY2027. Management emphasised that visibility relative to a year ago has improved and with capacity no longer a concerning factor for growth. Clarification around revenue generation for the business pointed to three revenue streams: contract manufacturing of optical switch components, alongside R&D codevelopment and inventory management, which are all underpinned by a long-term, deeply integrated hyperscaler relationship.
- Implications of China's reported US\$295bn AI build-out investment plan ([link](#))**. China is [reportedly](#) planning to invest around Rmb2trn (US\$295bn) over the next five years to build data centres across the country in a bid to strengthen its AI

capabilities and compete with the US. We believe the investment would facilitate the creation of a 'closed-loop' ecosystem within the domestic AI supply chain, strengthening efficiency and ultimately enhancing long-term profitability.

Key recent newsflow coverage

- **CBRE's Global Data Centre Trends report.** Latest [report](#) shows Data Centre markets remain extremely tight, with vacancy at record lows (e.g. Northern Virginia 0.3%, Atlanta 1%) despite ~33% inventory growth, reflecting ongoing power and grid constraints that are pushing prices higher. Demand remains robust, with North American absorption up 34% YoY to 2,236 MW and Europe up 90% to 572 MW, while growth is increasingly shifting to power-rich markets like Querétaro and West Texas. Rental rates continue to rise, reaching \$235–265/kW/month in Frankfurt and \$403/kW/month in Singapore.
- **Crusoe announces pause of 1.8GW Wyoming site 'at customer request'.** We do not view this as a read across because 1/ CNBC interview with Crusoe CEO ([link](#)) points to customer-related site issues, 2/ Crusoe talk about "tremendous" demand at other locations, more than can be fulfilled, and 3/ It is an early stage site and still working on power development
- **Applied Digital signs \$5.2bn hyperscaler lease.** It announced a 210MW AI campus lease with an unnamed investment-grade hyperscaler
- **Meta signs its first AI data-centre partnership in India,** securing capacity at a 168MW facility.
- **Amazon raises another \$17.5bn for AI build out.** For context, Amazon plans to invest roughly \$200 billion in capital expenditures in 2026. The bulk of that spending is tied to AI infrastructure, including data centers and custom chips.

Valuation Method and Risk Statement

The engineering sector is cyclical by nature. Our estimates and the share prices are therefore likely to be sensitive to changes in expectations for global or regional growth and industrial activity. Exchange rate fluctuations contribute additional risk to the sector. We value the stocks in our engineering coverage universe based on the average of cash flow (DCF, residual income and DDM) and static (multiple-based) valuation methodologies.

Required Disclosures

This document has been prepared by UBS AG London Branch, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates, including former Credit Suisse AG and its subsidiaries, branches and affiliates are referred to herein as "UBS".

For information on the ways in which UBS manages conflicts and maintains independence of its UBS Global Research product; historical performance information; certain additional disclosures concerning UBS Global Research recommendations; and terms and conditions for certain third party data used in research report, please visit <https://www.ubs.com/disclosures>. Unless otherwise indicated, information and data in this report are based on company disclosures including but not limited to annual, interim, quarterly reports and other company announcements. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 20 June 2026 08:12 PM GMT. UBS has designated certain UBS Global Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS Global Research publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS Global Research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at <https://neo.ubs.com/quantitative>, or contact your UBS sales representative for access to the report or the Quantitative Research Team on ubs-quant-answers@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

Analyst Certification:

Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

UBS Global Research: Global Equity Rating Definitions

12-Month Rating	Definition	Coverage ¹	IB Services ²
Buy	FSR is > 6% above the MRA.	54%	24%
Neutral	FSR is between -6% and 6% of the MRA.	40%	21%
Sell	FSR is > 6% below the MRA.	6%	21%

Source: UBS. Rating allocations are as of 31 March 2026.

1:Percentage of companies under coverage globally within the 12-month rating category.

2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS:**Forecast Stock Return (FSR)** is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES:**UK and European Investment Fund ratings and definitions are:** **Buy:** Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Consultation (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at <https://www.theocc.com/publications/risks/riskchap1.jsp> or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

UBS notes that no globally accepted framework or definition (legal, regulatory or otherwise) currently exists, nor is there a market consensus as to what constitutes an "ESG" (Environmental, Social or Governance) or an equivalent-label, or as to what precise attributes are required for the Information (as defined below) to be defined as ESG or equivalently-labelled. Any information, data or other content including from a third party source contained, referred to herein or used for whatsoever purpose by UBS or a third party ("Information"), in relation to any actual or potential ESG objective, issue or consideration is not intended to be relied upon for ESG classification, regulatory regime or industry initiative purposes ("ESG Regimes"). Nothing in these materials is intended to convey, suggest or indicate that UBS considers or represents any product, service, person or body mentioned in these materials as meeting or qualifying for any ESG classification, labelling or similar standards that may exist under the ESG Regimes. UBS has not conducted any assessment of compliance with ESG Regimes. Parties are reminded to make their own assessments for these purposes.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at <https://www.theocc.com/about/publications/character-risks.jsp> or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio incorporating ESG factors or Sustainable Investing considerations may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.
