Although 3Q26 earnings came up short on lower GM, we expect Accton to deliver high single digit % revenue growth with GM back to ~20% in 4Q26, reflecting some component consignment arrangements. Margin expansion in 4Q26 should be a positive catalyst for the share price in the coming months.

3Q26 GM slightly lower: Off revenue of NT$120,744mn (+26% QoQ/+66% YoY), GM contracted by 2.1ppt QoQ to 17.6% (vs. MSe and consensus both at 18.5%) on higher component costs. With opex of NT$5,162mn (opex ratio 4.3% vs. MSe 4.3%/consensus 4.0%), OP was NT$16,122mn (OPM 13.4%), 6%/5% lower than MSe of NT$17,183mn (OPM 14.2%)/consensus of NT$17,047mn (OPM 14.4%), respectively. With a narrower non-op gain of NT$94mn, net profit came in at NT$13,074mn (EPS NT$23.4), 2%/5% short of MSe/consensus of NT$13,328mn (EPS NT$23.9)/NT$13,748mn (EPS NT$24.5).

Outlook still on optimistic side: We expect Accton to grow revenue sequentially into 4Q26. Network switch customers will likely continue to pull in more for their AI clusters amid 800G migration. Meanwhile, its AI accelerator customer should ramp more of its new generation product and increase adoption of liquid cooling thermal solutions. To mitigate pressure from elevated component costs, it has negotiated with customers for them to consign some components, e.g., DRAM, from late 3Q26. Although this might cap revenue growth upside for Accton, it should help on the GM side. We model revenue of NT$130,083mn (+8% QoQ/+81% YoY), gross margin of 20.0% (+2.4ppt QoQ), operating margin of 15.5% (+2.1ppt QoQ) and EPS of NT$28.2 (+21% QoQ/+88% YoY). Looking to 2027, we see revenue growth of NT$526,019mn (+26% YoY) and GM of 20.0%, for EPS NT$112.9 EPS (+31% YoY).

Stay OW: We believe Accton should continue to benefit from networking and compute demand growth amid AI deployment, reflecting its system integration capability, customer relationships, and execution. For the longer term, it will likely tap into opportunities in rack level solutions, optical-based switches, etc. We lower our PT to NT$2,250 (20x 2027 P/E) from NT$3,500 (30x 2027 P/E), mostly owing to more conservative sentiment toward AI names.

Valuation Methodology and Risks

OW with PT of NT$2,250 (previously NT$3,500)

Price target (base case scenario value) – NT$2,250 (-36%): Our new price target is based on 20x our 2027 EPS estimate (30x previously). We lower our target multiple to factor in recent market sentiment toward AI names. We see our target multiple supported by the 45% operating profit CAGR we project for 2025-28. This implies a PEG of 0.4 vs. its average of 0.7 over 2019-25, when the stock was trading at a P/E of 22x for an operating profit CAGR of 32%.

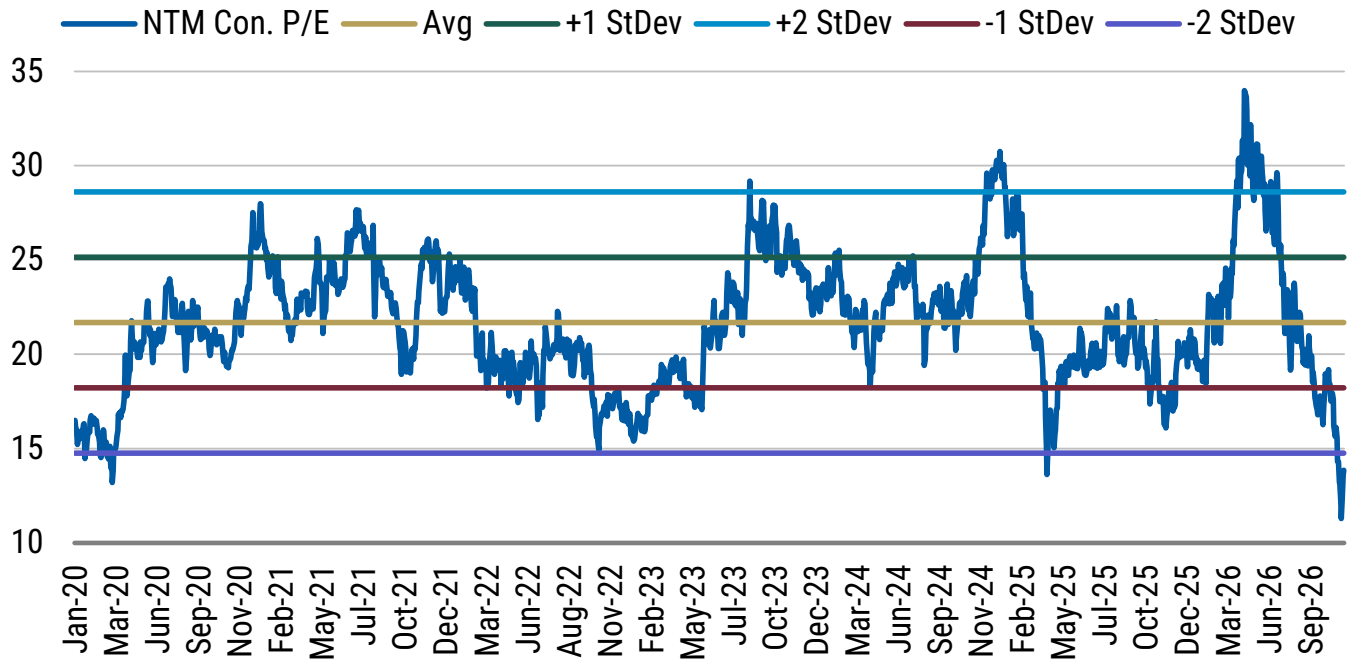

Bull case scenario value – NT$3,350 (-20%): We apply 30x to our base case EPS estimate for 2027 (36x previously). This scenario reflects stronger demand for network switches in both data center and enterprise applications as well as more orders for AI accelerator modules.

Bear case scenario value – NT$1,800 (-39%): We apply 10x to our base case EPS estimate for 2027 (16x previously). This scenario reflects lukewarm data center and enterprise capex and continued dominance by merchant GPUs in AI servers.

Downside risks to our positive thesis

- Weaker data center capex
- Slower network switch spec migration
- InfiniBand taking more share in AI networks
- Softer custom AI accelerator growth
- Softer ODM direct business model adoptions

Better Margin Trend Ahead

PRICE TARGET NT$2,250.00

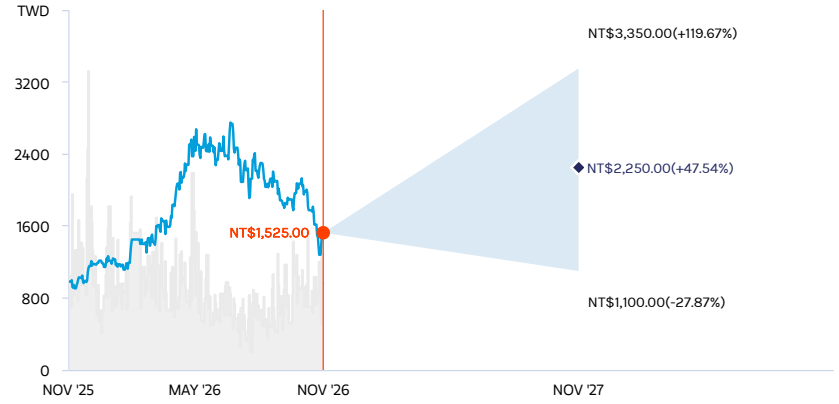

Base case, P/E, which we believe better captures the company's earnings growth momentum. We assign a target P/E of 20x to our 2027 EPS estimate, which we view as justified by an operating profit CAGR of 45% for 2025-28, based on our estimates. This implies a PEG of around 0.4, vs. its average of 0.7 over 2019-25, when the stock was trading at a P/E of 22x for an operating profit CAGR of 32%.

OVERWEIGHT THESIS

- We believe Accton, as one of the major network switch suppliers in the ODM direct market, will continue to gain from increasing data traffic (22% CAGR seen for 2023-30) and subsequent spec upgrades for processing throughput.
- We think that in addition to existing customers, it will leverage the open-source network operating system to broaden its customer base.
- We see the network switch business emerging as the major revenue driver in 2026, supported by increasing growth from its existing customer and incremental contribution from another hyperscaler.
- Our PT of NT$2,250 is based on a target P/E multiple of 20x 2027e.

BULL CASE NT$3,350.00

30x 2027e P/E

Faster-than-expected switch spec migration: 800G/1600G switch demand rises faster than expected, and Accton takes more share as a leading ODM supplier. Demand for AI cards and AI modules is much stronger than expected.

BASE CASE NT$2,250.00

20x 2027e P/E

AI and spec upgrades driving demand for network switches: Ethernet switch market continues to grow amid increasing Internet traffic, while the spec upgrade to 800G/1600G remains on track. In addition, Accton's network application business (smart NICs + AI cards) benefits from increasing adoption of custom AI accelerators in servers.

BEAR CASE NT$1,100.00

10x 2027e P/E

Slower-than-expected spec upgrades with InfiniBand gaining market share: 800G/1600G switch shipments are slower than expected, owing to weak demand. In addition, Ethernet technology loses market share to InfiniBand.
