Compal's server expansion is progressing, with revenue contribution rising to ~12% in 3Q and management targeting 30-40% in CY27. However, weaker PC volumes and diminishing scale benefits continue to pressure margins. At ~14x CY27E P/E, valuation remains stretched.

3Q OpM missed. See our 3Q26 Results Summary .

PC business facing demand and profitability headwinds: Compal expects a mid-teens q/q decline in 4Q26 shipments because of higher selling prices. This weakness should persist into CY27; the company projects a likely double-digit y/y unit decline, though it admitted that visibility remains low. However, rising ASPs from mix changes and cost pass-through could keep 4Q PC revenue up sequentially.

Servers have become a key growth driver: Servers rose from ~5% of the mix in 1Q to ~12% in 3Q, with a CY27 revenue contribution target of 30-40%. While 4Q26 server revenue is guided to be flat q/q, Compal is aggressively scaling its capacity. It now primarily ships from Taiwan, and a major L10/11 ramp will begin in 2Q27 at its new Texas plant. It currently does L10 HGX for Neocloud customers and L6 for a US enterprise customer; it will do L10/11 for enterprise customer(s) as well, and is actively approaching CSP customers for ASIC L11 solutions as well.

Margins to remain pressured: Overall margins were pressured by the PC segment, driving a sequential decline in 3Q owing to lower PC volumes and utilization. This margin headwind should intensify in 4Q because of shrinking PC business scale. Conversely, server gross margin should remain resilient in the high single digits to 10%, staying flat q/q.

4Q preview: We estimate that 4Q revenue will grow ~8% q/q, to NT$263bn (+38% y/y), primarily driven by higher PC ASPs despite declining volumes. GM should contracting ~10bps q/q, to 4.3% (-150bps y/y), with declining PC profitability, mainly owing to diminishing scale benefits. This leads to our OP estimate of NT$2.8bn (+25% q/q, +6% y/y) and NP estimate of NT$1.7bn (-34% q/q, +21% y/y), for EPS of NT$0.39. Our 4Q net profit estimate is down q/q because of lower non-op income.

Stay UW with price target unchanged at NT$23.0 (10.4x CY27 P/E). We think valuation looks quite stretched now at ~14x CY27e P/E. We prefer other ODMs like Wistron (6x), Hon Hai (12x), Wiwynn (8x), or Quanta (9x).

Price Target and Valuation Methodology

Our 12-month price target is unchanged at NT$23.0: Our price target is our base case scenario value, derived from a multistage residual income (RI) model. We use the company's beginning equity plus the present value of all expected residual income in excess of the cost of capital. The RI is positive when ROAE is above the cost of capital and negative when it is below.

We assume a cost of equity of 9.1% (beta of 1.3, equity risk premium of 6.0% and risk-free rate of 1.5%), a medium-term growth rate of 5%, and a terminal growth rate of 3% (all unchanged).

Our new price target implies a 2026e P/E of 10.4x and a 2027e P/E of 8.5x, below the five-year average of 13.8x. We view these as fair, because we factor in more conservative assumptions for its consumer business and a weaker margin outlook for Compal. The company's venture into the "new businesses" (e.g., auto, server, etc.) is constraining its margin profile as it tries to shift from 80%+ PC to more commercial exposure.

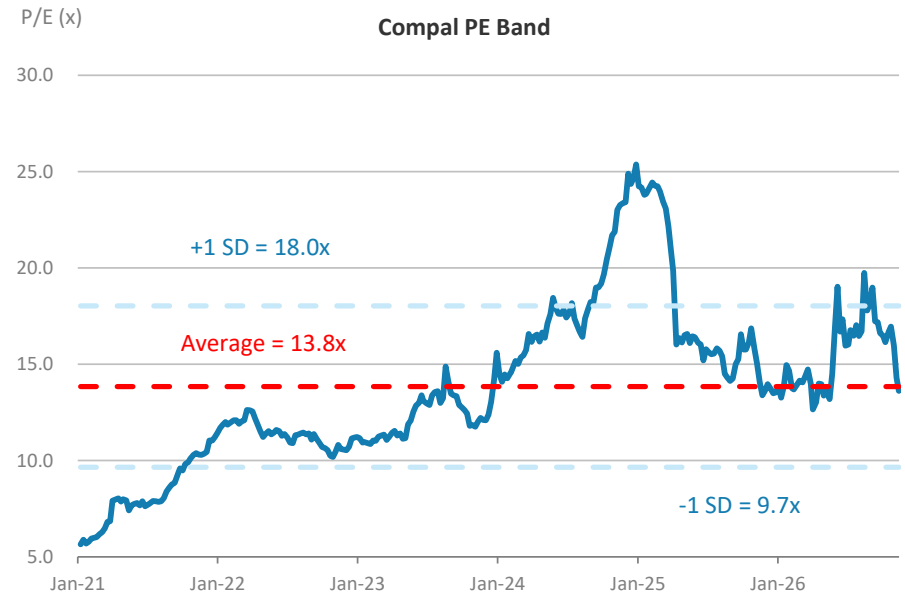

Our bull and bear case values are also unchanged, at NT$38.0 and NT$17.0, respectively.

PRICE TARGET NT$23.00

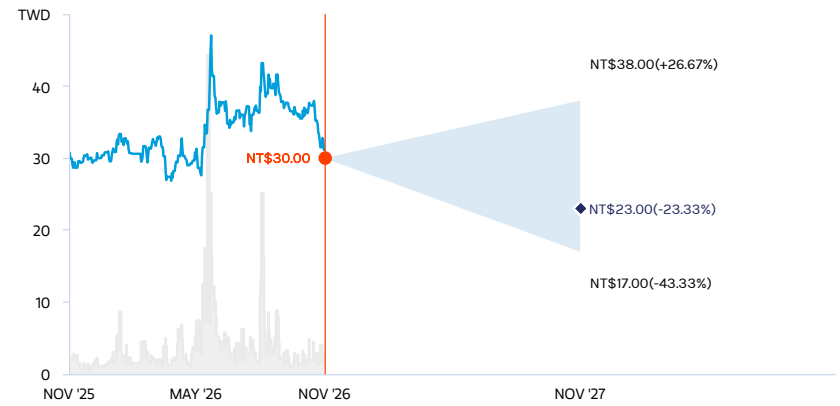

Base case, residual income model. Our key assumptions include a cost of equity of 9.1% (beta 1.3, equity risk premium 6.0%, and risk-free rate 1.5%), a medium-term growth rate of 5.0%, and a long-term earnings growth rate of 3.0%.

UNDERWEIGHT THESIS

- Compal's server expansion is progressing, with revenue contribution rising to ~12% in 3Q and management targeting 30-40% in CY27.
- However, weaker PC volumes and diminishing scale benefits continue to pressure margins.
- Our price target implies 10.4x our 2027 EPS estimate, below the five-year average of 14x. We view this implied P/E as fair, because we factor in more conservative assumptions for its PC business and a weaker margin outlook for Compal.

BULL CASE NT$38.00

17.0x 2027e EPS

Stronger sales growth; further margin improvement given favorable product mix and Apple Watch: We project total sales CAGR of 35-40% over 2025-28 and operating profit margin expansion to ~2.6% by 2028, vs. 1.4% in 2025.

BASE CASE NT$23.00

10.4x 2027e EPS

Sales fall with declining operating profit margin: We forecast +20-25% total sales CAGR, 2025-28, reflecting lukewarm NB sales growth, iPad and wearables sales decline amid rising competition from new entrants such as Luxshare and Hon Hai, and rising contribution from server/auto-related sales. We expect operating profit margin to increase to 1.2-1.3% in 2027-28, vs. 1.4% in 2025.

BEAR CASE NT$17.00

7.7x 2027e EPS

Weaker sales growth with margin contraction: We project total sales to decline 5-10% p.a. in 2025-28, owing to weak PC and tablet PC demand as well as weak wearables demand amid rising competition from new entrants. We forecast that operating profit margin will contract to 0.9-1.0% in 2027-28, vs. 1.4% in 2025.

Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.
