

Assessing AI in finance with Evident Co-CEO Alexandra Mousavizadeh

June 9, 2026

Banks are racing to invest heavily in AI to avoid being left behind, even though the impact is yet to show up significantly in their bottom line, cost-to-income ratios or share prices, Alexandra Mousavizadeh, Co-Founder and Co-CEO of Evident, said in a [Deutsche Bank Research Institute](#) dbInSights webinar last week.

The industry has spent the past three years testing AI and is now entering a new phase of production at scale, said Mousavizadeh of [Evident](#), whose AI Index is the global standard benchmark of AI maturity for financial services companies.

“We are still in the foothills of the journey,” she told Adrian Cox, Thematic Strategist for the Institute, adding that investment in building in-house research teams, creating an engineering culture and thinking through workflows and architectures over the past decade is paying off for early movers.

“The longer you wait, the harder it is going to be,” she said.

It will probably take another two years to see the results at the leading banks and another eight to ten years for the technology to be fully diffused throughout the industry, she said.

The most impactful cases are not always the most sophisticated, Mousavizadeh said. Streamlining Know Your Client (KYC) activities can provide an instant revenue lift, often from simply re-engineering old workflows, with AI layered on top to automate and accelerate them. In the meantime, more complex use cases are emerging, such as AI agents to stitch together different processes and departments, she said.

The webinar also includes debates on why Mousavizadeh sees no jobs apocalypse in finance, what differentiates successful adopters of AI, how different regions are diverging, and what advice she would give a young professional entering the workforce.
