Price Target Change

HBM4e Ramping, Sizing Agentic AI Impact, and HBF/LTAs - Raising Ests/PTs

We take a deeper look at the memory market and the Agentic AI impact. **Key points:** **1) DRAM:** demand strong into 2027E, with Vera with 3x LPDDR5 content vs. Grace and Agentic AI driving 9-13% incremental global DRAM demand, potentially up 30%+ y/y vs prior ~22% y/y, **2) HBM:** we see TAM growing at a 90% 2025-28E CAGR, driven by content/pricing tailwinds with 2027E HBM4e pricing up ~70-100% y/y and some ASIC customers going straight to HBM4e(from HBM3e), and **3) NAND:** demand not slowing down, with eSSD/KV Cache strong and tightening 2027E with HBF potentially entering the market. **Reiterate Outperform and raise estimates ABOVE consensus. Raise PT for MU to \$1,150, SNDK to \$1,825, ARM to \$360 and DELL to \$350 as key enablers of the AgenticAI revolution. Raise ON PT to \$150. MU Remains our TOP PICK.**

Key Points

Agentic AI CPU Impact on DRAM Could Add 9-13% Demand Upside for Tight Market - 3 Ways - Bottom-up, BoE and Top-down. We analyze the Agentic AI impact on global DRAM demand three ways (Ex-2, Ex-3, Ex-4) and find a potential upside of 9-13% incremental global DRAM in 2027E. We believe DRAM will remain tight as demand from Agentic AI drives upside through 2027E. With NVDA preparing to roll out VR200 NVL72 racks, ~3x DRAM content increase vs. GB300 NVL72 racks, while Vera-only racks could drive ~400TB of DRAM content ([Link](#)). **In our BoE analysis (Ex-3), we see ~7.9k CPU-only racks shipped in 2026E, which could drive an additional 3EB of DRAM demand, which we estimate is ~7% of 2026E DRAM supply.**

2027E HBM Demand Upside with Pricing Tailwinds. DRAM demand still expected to outpace supply into 2027E, with HBM trade ratios and limited capacity adds. We see the HBM market growing at a 90% 2025-28E CAGR from \$36B to \$246B (Ex-8), with HBM4/4e ramps in 2027E driving upside as OEMs look to balance HBM/DDR5 production with higher HBM trade ratios (4:1), while DDR5 offering stronger margins N-T. We continue to see tight supply and HBM4/4E transition potentially lifting blended HBM pricing up 70-100% y/y in 2027E. Additionally, we note potential for MU and other suppliers to add more LTAs as key customers are only receiving 50-70% of estimated demand.

NAND and HBF - 16 Layer Stacked SLC NAND for HBF - Setting Up for Tightening in 2027E. We believe SNDK could show Gen1 HBF in 2H26E, with potentially a Gen2 in 2027E, with MU also potentially developing HBF. We see NAND following DRAM with tightening supply in 2027E as AI demand for high-bandwidth memory capacity continues to increase with KV Cache/Prefill/Decode. We believe an HBF ramp could drive upside for the NAND market, with similar HBM bandwidth while delivering 8-16x capacity on 16 layer stacked SLC.

Reiterate Outperform, Raising Ests/PTs for SNDK/MU, ARM/DELL, ON. MU: Raising PT to \$1,150, as key HBM (~25% of revenue) seeing 70-100% y/y Px increase for C27E ([Link](#)), Agentic AI ramping in 2H26-2027E driving potentially 7-10% upside DRAM demand, potential for broad LTAs with no 2026-27E supply adds driving upside to revenue/EPS. **SNDK: Raising PT to \$1,825,** ~10x F27E P/E (prior ~9x) with C27E rev/EPS up 135%/189%, driven by eSSD/HBF tailwinds. **ARM: Raise PT to \$360, 2.7x our F27E PEG and DELL: Raise ests/PT to \$350** with tailwinds from Agentic AI server ramps. **ON: Raise PT to \$150,** 32x F27E EPS with Agentic AI server content growth.

Agentic AI Drives Higher DRAM Upside into 2026-27E+ with Supply Already Tight

Long-Term Look at the Global DRAM Market as HBM and Agentic AI Ramp

We size the HBM market and Agentic AI DRAM impact in the exhibits below. We believe HBM will grow from ~7% of DRAM bit shipments in 2025 to ~17% in 2028E, reaching ~11EB, and growing at a 61% 3Y CAGR. For Agentic AI, we believe significant upside to DRAM demand could occur in 2026E, driving growth from 51PB in 2025 to ~8,000PB (8EB) in 2028E, or 13% of global DRAM demand, and growing at a 440% 3Y CAGR. Together, HBM and Agentic AI we believe could grow to account for ~30% of global DRAM demand in 2028E.

Exhibit 1 - Agentic AI and HBM Mix Growing to 30% of Global DRAM Demand

Source: company reports, Gartner, Trendforce, MSUSA estimates

Sizing Agentic AI DRAM Demand Upside - 3 Ways

Our three-way analysis of Agentic AI's impact on incremental DRAM demand indicates potentially 9-13% of 2027E incremental global DRAM demand. We used three ways to analyze the potential incremental impact to global DRAM demand: **1) bottoms up** -we used assumptions on MAU, tasks/day, and CPU/core intensity to arrive at ~2% global DRAM in 2026, growing to ~9% by 2027E, **2) back-of-the-envelope** - we used NVDA's \$20B CPU revenue implications on standalone Vera-CPU rack demand, leading to an implied ~7% of global DRAM in 2026E and potentially reaching 12% in 2027E given continued Vera-only rack strength, and **3) top down** - we used our AI Infrastructure TAM estimates, split by workload (agentic/inference/training), driving implied incremental DRAM demand to 11% in 2026E and 13% in 2027E.

#1 - Bottoms Up - Agentic AI MAU and CPU Intensity Driving Strong Growth

Our bottoms up approach takes into account assumptions on Agentic AI MAU and our view of the number of CPU seconds required for a specific task called by a prompt. Agentic AI drives >1,000x token generation vs. GenAI reasoning with significant workload demand on CPU for agent orchestration, read/write loops, and sub-agent coordination. We estimated Agentic AI MAU was ~200M in 2025 (~out of 2-3B GenAI users) growing to 1.5B by 2027E. We believe the CPU demand driven by Agentic AI could grow from ~1EB in 2026E to 5EB in 2027E, or 9% of the DRAM market.

Exhibit 2 - Bottoms Up Assumptions Imply Strong CPU and DRAM Growth

Key assumptions	2025	2026E	2027E	Unit
Agentic AI Monthly Active Users (MAU)	200	700	1500	#M
Prompts/Day	30	60	75	#
DRAM/CPU	0.75	1.20	1.50	TB
OUTPUTS	2025	2026E	2027E	Unit
Daily Tasks	60	840	3,375	B
CPU Sockets	68	788	3,380	K
DRAM Demand	51	945	5,071	PB
Global DRAM (PB)	35,449	45,072	55,721	PB
Agentic AI % Global DRAM	0.1%	2.1%	9.1%	

Source: company reports, MSUSA estimates.

#2 - Back of the Envelope - NVDA \$20B CPU Revenue Implies Incremental Vera CPU-only Racks

As we have previously noted, we see NVDA moving from Grace CPU with Blackwell to Vera CPU with Rubin driving 3x LPDDR5 content. NVDA has noted Grace with ~500GB of LPDDR5, while Vera capacity is expected to come in at 1.5TB of LPDDR5 SOCAMM. NVDA plans to launch a Vera CPU-only rack as part of its next-generation of servers, we believe with potentially as many as 256 Veras in it, which would translate to ~400TB of DRAM content, as it looks to capture more of the Agentic AI market. Our BoE estimate implies potentially ~7.9k of standalone Vera CPU racks, which we believe could translate to 3EB of incremental DRAM demand, or ~7% of our estimated 2026E supply, potentially moving higher to ~12% of 2027E supply.

#3 - Top Down - Growing Agentic AI Workload Mix Drives Strong CPU and DRAM Content Growth.

We estimate AI Infrastructure TAM growing from ~\$600B to \$1T in 2027E, and Inference to grow faster than training, reaching ~\$600B by 2027E. We estimate the majority of the inference workloads will remain on reasoning, but expect rapid growth for Agentic Inference, reaching 15% in 2026E to 20% in 2027E. We believe this could imply 4-5M Agentic AI CPU incremental demand, at 1.2-1.5TB/CPU, represents potentially 11-13% of global DRAM demand in 2026E/27E.

Exhibit 3 - Our BoE Points to Strong DRAM Upside from Standalone Vera CPU Racks

Potential DRAM Upside from Vera CPU Racks	2026E	2027E
Estimated NVDA GPUs	6,554,000	6,652,000
CPU Attach (Grace + Vera)	3,277,000	3,326,000
Implied Attached CPU Revs	9,831,000,000	13,304,000,000
Standalone CPU Revs (\$)	10,169,000,000	21,696,000,000
Implied Standalone CPUs (\$)	2,033,800	4,339,200
Implied Standalone Racks	7,945	16,950
Implied DRAM Upside @ 1.5TB/Vera CPU	3,050,700	6,508,800
Total DRAM Demand (TB)	45,071,977	56,028,443
Vera CPU Racks % of Global DRAM	7%	12%

Source: Trendforce, MSUSA estimates

Exhibit 4 - Top Down Implies Agentic AI Growing Strongly

Mizuho estimates	2025	2026E	2027E
AI Infrastructure TAM (\$B)	600	817	1000
Training (\$B)	360	367.5	400
Inference (\$B)	240	449	600
% agentic-inference	5%	15%	20%
agentic-inference (\$B)	12	67	120
CPU % of BOM	20%	18%	15%
CPU ASP (\$)	2500	3000	3750
CPU units (m)	1	4	5
DRAM/CPU (TB)	0.75	1.2	1.5
DRAM (PB)	720	4851	7200
Global DRAM (PB)	35,449	45,072	55,721
% of Global DRAM	2%	11%	13%

Demand Growth Outpacing Supply into 2027E

With more DRAM wafers being dedicated to HBM and their higher trade ratio vs. traditional nodes as HBM4 ramps (4:1 trade ratio vs. DDR4/5), we estimate 2026E DRAM wafer starts at 25.2M 12" wafers, up ~10% y/y, while we estimate 2027E up another ~6% y/y to reach 26.7M 12" wafers. For NAND, with no greenfield capacity adds expected to come online before 2028E, we estimate wafer starts to see minimal growth as we estimate 2026E 12" wafers down ~1% y/y to 16.1M units, before node transitions drive a slight recovery in 2027E, with 12" wafer starts estimated up ~3% y/y to 16.6M units. Despite wafer starts ramping, we believe some key customers are still only able to receive 50-67% of their expected demand, with shortages potentially impacting handset/PC/consumer/auto customers more than AI customers.

Exhibit 5 - Demand Growth Outpacing Wafer Starts as AI Demand Accelerates

Source: Trendforce, MSUSA estimates

Exhibit 6 - NAND Wafer Starts Flattish as eSSD Demand Accelerates

Source: Trendforce, MSUSA estimates

HBM Tailwinds Accelerating into 2027E with 4/4e Ramps

We continue to see pricing remaining strong across the memory complex in 2026E as AI drives demand well ahead of supply with our checks indicating strength could last into 2027E. We note continued strength in HBM pricing, with HBM4 ramps in 2026/27E and HBM4e driving tailwinds as we estimate blended HBM pricing potentially up 70-100% y/y in 2027E. With hyperscaler capex expected to ramp to >\$1T by 2028E, we see HBM also increasing as model sizes increase and with increasing inference demand. We now estimate the 2026E HBM TAM could reach \$57.2B (prior: \$48.2B), up ~60% y/y driven continued HBM3e shipments for GB200/300 and ASIC shipments, while we estimated a limited impact from HBM4 in 2026E due to 2H26E ramps for VR200-based servers. We see HBM growth accelerating into 2027E, with the TAM estimated to reach \$157B, up ~174% y/y, we believe driven by HBM4 mix increasing to 81%, which we believe should be buoyed by stronger pricing as yields improve and demand accelerates with VR200, with the total HBM TAM growing at 90% 2025-28E CAGR.

Exhibit 7 - DDR5 Pricing Trending Closer to HBM After Recent Run

Exhibit 8 - HBM4 Shipments Underway as Rubin Drives Strong Content Gains gen/gen

Source: Trendforce, company reports, MSUSA estimates

NAND Seeing, CMX, KVCache, and HBF Drive 2027E Demand

MU recently announced that its first PCIe Gen6 122TB eSSD is in volume production to support the ramp of NVDA's Bluefield4 DPU STX racks as NAND content in AI clusters continue to increase. We see increasing demand for KVCache from NVDA's upcoming CMX racks as a key driver in 2H26/1H27E, while future HBF products we expect could launch in 2027E delivering another key tailwind with SNDK and MU as key potential suppliers. With content per rack increasing as AI inference/Agentic AI demand continues to accelerate, we see potential for 2027E pricing to be up another 50% y/y, driven by expanding CMX deployments, lack of new material supply additions in 2026/27E and potential growth in PC/handset, where on-device AI continues to drive higher NAND content.

Exhibit 9 - Expanding Memory Stack in AI Servers with eSSD, HBF, CMX, and SRAM

Expanding Memory Stack for AI Servers					
2025	HBM (288GB)	TLC eSSD (128TB)	Nearline HDD (24TB)		
2026E	HBM (288GB)	HBF NAND (4-8TB)	CMX (16TB)	TLC eSSD (128TB)	Nearline HDD (24TB)
2027E	SRAM (40GB)	HBM (288GB)	HBF NAND (4-8TB)	CMX (16TB)	TLC eSSD (128TB) Nearline HDD (24TB)

Source: Company reports, MSUSA estimates

Exhibit 10 - HBF to Potentially Drive Further Tightness in Supply in 2027E

Source: Company reports, MSUSA estimates

Memory and Storage Valuation - Growth Story with Sustained Upcycle

Memory group now trading at ~5x 1Y Forward P/B, above historical through cycle 1-2x P/B, as AI drives a structurally constrained memory supply chain. We see the memory/storage group re-rating higher as it shifts from a commodity and cyclical industry to a structurally-constrained AI enabler, with sustaining multi-year tailwinds and limited capacity expansion. On 1Y Forward P/E, the memory group is now trading at 7-10x, within its historical 4-16x range and relatively attractive given EPS growing 70%+ y/y, and a discount to the SOX at 27x. SNDK is now trading at 9x 1Y forward P/E, similar to Apr'25, before the historical NAND price appreciation, and we believe remains attractive given NAND supply is limited to a few players with strong pricing and CPX and HBF demand tailwinds. For HDD, we see both P/E and P/B expanding as the space sees premium from potentially more stable pricing/demand L-T while also benefitting from exponential storage needs growth and pricing expansion.

Exhibit 11 - Memory PEs Remain Attractive and Historically Low while HDD moves Higher

Source: Bloomberg, MSUSA

Exhibit 12 - Memory/Storage P/B Expanding as EPS Growth Continues

Source: Bloomberg, MSUSA

MU - Reiterate Outperform, Raising Estimates and PT to \$1,150 from \$800

- Raising F26E Rev/EPS estimates from \$109B/\$58.16 to \$111B/\$59.68 (cons. \$110B/\$59.16)
- Raising F27E Rev/EPS estimates from \$181B/\$104.74 to \$190B/\$110.10 (cons. \$180B/\$104.57)
- Raising F28E Rev/EPS estimates from \$179B/\$94.40 to \$257B/\$140.03 (cons. \$177B/\$99.68)

Reiterate Outperform and raise PT to \$1,150 (prior: \$800), 5.3x our F27E P/B (prior: 3.8x), a slight discount to SNDK at 5.4x, and inline to the group at ~5x. On P/E, our PT represents ~10x F27E EPS, with strong DRAM/NAND tailwinds driving F27E rev/EPS up 70%/85% y/y as HBM (23% of F28E revs) seeing potential 70-100% y/y C27E price increases, and additional tailwinds from Agentic AI ramping into 2027E, and upside to both DRAM/NAND demand with no significant capacity ramps through C27E, while key non ex-AI customers remain 30-50% undersupplied. We note potential additional upside with LTAs extending customer agreements into 2028E and broadening across consumer/PC/handset, joining some data center customers with our F28E EPS now 41% above consensus as we see upside driven by continued tight supply and pricing tailwinds.

Exhibit 13 - MU Estimate Changes Overview

	3Q26E	F26E	F27E	F28E	3Q26E	F26E	F27E	F28E	3Q26E	F26E	F27E	F28E

SNDK - Reiterate Outperform, Raising Estimates and PT to \$1,825 from \$1,625

- Raising F27E from \$42.3B/\$172.54 to \$45.3B/\$184.95 (ABOVE cons. \$43.6B/\$180.14)
- Raising F28E from \$45.5B/\$185.19 to \$48.1B/\$196.85 (ABOVE cons. \$47.4B/\$194.54)

Reiterate SNDK at Outperform, raise PT to \$1,825 from \$1,625, 9.9x our F27E EPS (prior 9.4x), with NAND tightness expected to persist into 2027E, driving continued strength in margins as HBF and CMX racks potentially add to tightness and drive further demand.

Exhibit 14 - SNDK Estimates Overview

Reiterate ARM at Outperform, raise PT to \$360 from \$290, 2.7x our F28E PEG (prior: 2.2x), as we see tailwinds from both internal CPU ramps in C27E, as well as continued strength from customer CPUs (Grace/Vera/Axion/Cobalt/Graviton), as ARM stands to benefit from Agentic AI CPU ramps under the 3 scenarios laid out above (Ex-1/2/3).

DELL - Reiterate Outperform, Raising ests/PT to \$350 (prior: \$300)

- Raising F27E revs/EPS from \$143B/\$13.15 to \$144B/\$13.19 (cons. \$142B/\$13.10)
- Raising F28E revs/EPS from \$158B/\$15.05 to \$159B/\$15.35 (cons. \$158B/\$15.18)

Reiterate Outperform and raise PT to \$350 (prior: \$300), ~23x our F28E EPS (prior: 20x) as we see DELL benefitting from Agentic AI server ramps, with Vera-only racks potentially made by DELL, an expanding AI server backlog, and continued storage ramps.

Exhibit 15 - DELL Estimate Changes Overview

	1Q27E	F27E	F28E		1Q27E	F27E	F28E		1Q27E	F27E	F28E

Source: Bloomberg, MSUSA estimates

Reiterate ON at Outperform, raise PT to \$150 from \$130, 32x our F27E EPS (prior: 28x), as we see ON benefiting from AI server ramps, both agentic AI and training/inference, as it ramps its 800V architecture with additional tailwinds from industrial ramps as inventories appear to be at normalized levels, we believe offsetting any near-term headwinds from slower LVP. We note demand improving as lead times for some products have extended to 40+ weeks as capacity remains tight for some components, including AI server MOSFETs, while Nexperia headwinds continue to benefit ON in the near-term.

Price Target Calculation and Key Risks

Sandisk Corporation (SNDK)

Investment Thesis

We see Sandisk as a leading player in the NAND flash market with strong positioning across key end-markets, including Consumer, Client, and Cloud. We believe the growing data storage needs of next-gen AI models are accelerating while expanding beyond data centers, including edge devices such as smartphones and PCs, is driving strong demand for Sandisk's products, driving mid-to-high teens CAGR in NAND bit shipments. We also see tight wafer supply supporting NAND ASPs through C2027E. We believe Sandisk attractively positioned to capitalize on secular growth in data storage given its strong portfolio of current and next-gen NAND flash memory products.

Base Case/PT

We see Cloud strength and 2H-weighted better PC/Client demand setting up SNDK for top-line growth while benefiting from synergies via its JV with Kioxia as BiCS8 ramps, a strong product roadmap, eSSD share gain, and secular AI-demand exposure. In our base case, we see ~10x our F27E EPS for a \$1,825 PT.

Bull Case/PT

Should pricing trends improve faster-than-expected or demand for memory storage products prove stronger-than-expected as AI demand drives eSSD higher, we believe SNDK should be able to deliver ~20% higher revenues vs. our base case estimates, implying bull case PT of \$2,250 at ~11x our upside F27E EPS of \$207.14.

Bear Case/PT

If NAND pricing fails to stage a recovery or starts to fall after a strong 1Q26, we believe SNDK's top-line growth throughout our forecast horizon would likely be significantly pressured, resulting in a ~15-20% shortfall in revenues vs. our base case estimates and implying bear case PT of \$1,450, or ~9x our downside F27E EPS of \$168.14.

Risks

Key risks to our outlook for SNDK include: **1)** either a slower-than-expected recovery or further deterioration in NAND pricing driving slower top-line growth and worse-than-expected operating leverage; **2)** failure of AI-enabled edge devices to gain traction with consumers leading to a less material than expected smartphone/PC upgrade cycle, implying lower demand for SNDK's memory products; **3)** a slower-than-expected rollout or failure to commercialize next-gen memory products by SanDisk which allows competitors to take share from the company; and **4)** increasing competition from domestic suppliers in the Chinese market potentially leading to share loss in a key region.

Micron Technology, Inc. (MU)

Investment Thesis

We see MU benefiting from AI-driven tailwinds supporting HBM share gains led by NVDA, while AI-enabled PCs and phones could see DRAM and NAND content double. We believe MU remains well positioned with leading edge DRAM nodes driving cost-downs while remaining disciplined with wafer starts. We believe MU remains attractive with strong AI demand driving HBM, eSSDs, LP5 and high-density DIMMs while AI on-device for PC/Handsets drives stronger content gen/gen.

Base Case/PT

We see continued strength into C26E with better HBM pricing, industry supply discipline, and further ramps of leading edge products, offsetting legacy product weakness. We rate MU Outperform with a \$1,150 PT, ~5.3x our F27E P/B.

Bull Case/PT

Extraneous shocks to supply, AI demand accelerating further with low inventory could drive DRAM/NAND prices higher earlier, as well as HBM ramps ahead of expectations, and drive upside to the stock, we believe towards ~\$1,500, at ~7x our upside F27E P/B.

Bear Case/PT

Higher than expected pricing pressure on NAND and DRAM, with softer than expected demand from Data Center, PC, or handsets, as well as slower than expected share gains in HBM, could see a return to broad-based memory oversupply and MU trade closer to ~4x our downside F27E P/B, or ~\$850.

Risks

Key risks include for MU include memory ASP declines and cyclicalities, competitive and market share pressures, increased industry memory capacity and capex from competitors, higher than expected costs or yield issues, slower DRAM/NAND improvement and/or yield issues affecting ramps, and increased HBM competition, limiting MU's share growth.

Arm Holdings plc (ARM)

Investment Thesis

ARM is a global leader in semiconductor intellectual property (IP), powering >99% of the world's smartphones and has shipped 300B+ Arm-based chips to date. Arm leverages a broad IP platform across client (smartphone, PC, XR and wearables), infrastructure (servers, cloud, networking, and 5G), automotive, and Internet-of-Things (IoT) end-markets to bring energy-efficient central processing units (CPU), graphics processing units (GPU), and system IP to its customers. We see ARM well positioned as the company should see increasing royalty revenues driven by 2-3x core counts gen/gen, increasing v9 penetration (~5% rate), 2-3x vs v8, CSS at 8-10%+ rates. ARM is expanding its TAM 10x+ with AGI CPU and potential AI ASIC products longer-term. We see strong growth opportunities in AI with CSPs AMZN/META/MSFT/GOOGL expanding Capex while ARM dominates efficient edge compute in Auto/Client, IoT.

Base Case/PT

We see ARM as a global leader in semiconductor IP, and increasing opportunities in DC, client and automotive to drive better units/content. We rate ARM Outperform with a \$360 PT, ~2.8x F28E PEG.

Bull Case/PT

ARM could see stronger than anticipated demand and share gains driven by AI ramps, improved IoT, and faster transitions to v9. In our Bull case scenario, we see Arm share prices rising to \$465, at ~3.5x our F28E PEG.

Bear Case/PT

If ARM sees slower v9 adoption, or is impacted by geopolitical headwinds with Arm China, we could see weaker earnings growth and softer ~2.1x F28E PEG, resulting in a Bear case scenario of \$270/share.

Risks

ARM could see competition from emerging open-sourced architectures such as RISC-V, but could also see impacts from slower AI/handset markets as well as challenges sustaining higher royalty rates. We would also note that ARM's current revenue mix is highly tied to the handset market, where it has ~100% market share, while its top 5 customers make up >50% of its revenues and sees investor concentration with Softbank still owning ~90% of shares. INTC-NVDA partnership is another risk, though we believe remains early with ARM maintaining strong 50-65% power efficiency advantages over x86.

Dell Technologies Inc. (DELL)

Investment Thesis

We see DELL as a growing player in the AI server market, with broad exposure to Enterprise/Sovereign/CSP AI demand and with a growing pipeline (growing q/q, and we believe still above its current backlog of \$43B). We see DELL benefiting as Blackwell ramps DLC and Air-cooled servers with strength across enterprise, sovereign and CSP customers. We do see N-T headwinds from lower initial AI server OMs, but we highlight offsets from traditional compute server strength and its strong storage margins. We see potential tailwinds from DELL with increasing storage needs tied to AI server cluster ramps, as well as benefit from an expected corporate PC refresh, which could lead to higher adoption of AI PCs as refresh cycles have elongated to 3-4 years post-Covid vs. historical 2-3 years. However, we note increasing memory costs could weigh on near-term unit sales, but we think strong execution and corporate PC focus could help DELL take share. We believe DELL has negative WC due to strong supplier relationships and a strong balance sheet, which helps drive strong FCF to support its growth into the AI server market.

Base Case/PT

With a strong compute server market share, growing AI server share, and a pending corporate PC refresh, we rate DELL Outperform with an \$350 PT, ~23x our F28E EPS.

Bull Case/PT

If DELL can build off its strong AI server backlog and capture more of its continuously growing pipeline, as well as see strong ramps of AI PCs and corporate PC orders, we believe DELL's could trade at a ~27x P/E on our upside F28E EPS of \$16.88, indicating a \$450PT.

Bear Case/PT

If DELL sees its AI share stagnate or fall and the PC refresh cycle takes longer than expected while also suffering from the current memory headwinds, we could see DELL trade at a ~19x P/E on our downside F28E EPS of \$14.21, or a \$270PT.

Risks

DELL risks include the potential slowing of AI server ramps, slower than expected AI PC ramps, a continued drawing out of corporate PC refreshes, customer concentration in the AI server market as DELL mostly services Tier-2 CSPs and enterprise customers who traditionally have less deployable capital than hyperscalers, margin sensitivity as ramping of AI servers could lead to compressed margins in the short-term as it offers deals to win share, competition with AI server builds all fairly similar and DLC server being expensive and leading customers potentially back to air-cooled, as well as geopolitical/macro risks.

ON Semiconductor Corporation (ON)

Investment Thesis

We consider ON well-positioned with a diversified and expanding portfolio in Power semis, image sensors, and connectivity, benefiting from long term secular tailwinds in xEV/ADAS, Industry 4.0, renewable, and AI Data Centers. We believe analog silicon recovery emerging for ON, similar to MCHP, NXPI, ALGM, and TXN, with inventory replenishment. We continue to see ON's SiC business facing headwinds with slower EV growth and China competition risk. We note IRA tax credit rollbacks in the US pose near-term headwinds to increased adoption. We continue to estimate SiC demand growing at a ~45% CAGR ('23-'30E), vs supply at 51%, as we see oversupply risk in 2026E as China ramps SiC. ON is starting to see AI DC revenues ramp, with 2025 at \$250M and growth expected in 2026E as its potential content opportunity increases to \$115k/rack, vs. ~\$9.5k today as power consumption increases to 600kW-1MW

Base Case/PT

We believe ON is well-positioned for long-term industrial growth and is an EV content story with additional tailwinds from renewable energy despite some near-term headwinds. We have ON rated Outperform with a \$150 PT, ~32x our F27E EPS.

Bull Case/PT

If ON can continue to grow Automotive and Industrial ahead of competitors, we believe the company could benefit from stronger top line and GM expansion, resulting in an F26E bull case PT of \$210, ~41x our upside F27E EPS of \$5.15.

Bear Case/PT

ON could potentially see Automotive and Industrial softness over the near-term as well as slowdown in energy generation, resulting in a downside PT of \$100 or ~24x our downside F27E EPS of \$4.25.

Risks

ON is sensitive to the automotive market with >50% revenue exposure, though high EV/SiC content mitigates some risk longer-term. ON also is sensitive to Consumer and Industrial end-markets with macro risks potentially weighing on shares as inventories are higher in some end-markets. Increasing competition from China OEMs, in both silicon and SiC markets is also a potential headwind.

Companies Mentioned (prices as of 5/26/2026)

Advanced Micro Devices, Inc. (AMD- Outperform \$503.89)

Regulation Analyst Certification (AC)

I, Vijay Rakesh, hereby certify that the views expressed in this research report accurately reflect my personal views about any and all the subject companies. No part of my compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.

Rating Definitions

As of 6/21/2024, Mizuho Securities USA (MSUSA) uses a relative rating system in which stocks are rated as Outperform, Neutral, or Underperform (*see definitions below*) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "relevant industry coverage universe"). Investors should read the research report in its entirety, including the definitions of all ratings, and not infer its contents from the rating alone.

Investment ratings are based on the following definitions: The expected total return calculation includes anticipated dividend yield.

Outperform (O): The stock's total return is expected to outperform the unweighted, expected total return of the analyst's industry coverage universe over the next 12 months.

Neutral (N): The stock's total return is expected to perform in line with the unweighted, expected total return of the analyst's industry coverage universe over the next 12 months.

Underperform (U): The stock's total return is expected to underperform the unweighted, expected total return of the analyst's industry coverage universe over the next 12 months.

Restricted (R): In certain circumstances, MSUSA policy and/or applicable securities regulations preclude certain types of communications, including investment recommendations, during the course of Mizuho's engagement in certain transactions and in certain other circumstances.

Rating Suspended (RS): The rating and target price have been temporarily suspended due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances.

Not Covered (NC): MSUSA does not cover the company.

For disclosure purposes only (NYSE and FINRA ratings distribution requirements), our Outperform, Neutral and Underperform ratings are displayed as Buy, Hold and Sell, respectively.

Prior to 6/21/24, MSUSA's ratings were Buy, Neutral and Underperform.

Rating Distribution

(As of May 26)	% of coverage	IB service past 12 mo
Buy (Outperform)	63.31%	52.05%
Hold (Neutral)	32.63%	51.24%
Sell (Underperform)	4.06%	44.00%

For disclosure purposes only (NYSE and FINRA ratings distribution requirements), our Outperform, Neutral and Underperform ratings are displayed as Buy, Hold and Sell, respectively.

Disclaimers

This report has been prepared by Mizuho Securities USA LLC ("MSUSA"), a subsidiary of Mizuho Americas LLC, solely for the purpose of supplying information to the clients of MSUSA and/or its affiliates to whom it is distributed. This report is not, and should not be construed as, a solicitation or offer to buy or sell any securities or related financial products.

This report has been prepared by MSUSA solely from publicly available information. The information contained herein is believed to be reliable but has not been independently verified. MSUSA makes no guarantee, representation or warranty, and MSUSA, MHSC and/or their affiliates, directors, employees or agents accept no responsibility or liability whatsoever as to the accuracy, completeness or appropriateness of such information or for any loss or damage arising from the use or further communication of this report or any part of it. Information contained herein may not be current due to, among other things, changes in the financial markets or economic environment. Opinions reflected in this report are subject to change without notice.

This report does not constitute, and should not be used as a substitute for, tax, legal or investment advice. The report has been prepared without regard to the individual financial circumstances, needs or objectives of persons who receive it. The securities and investments related to the securities discussed in this report may not be suitable for all investors. Readers should independently evaluate particular investments and strategies, and seek the advice of a financial adviser before making any investment or entering into any transaction in relation to the securities mentioned in this report.

MSUSA has no legal responsibility to any investor who directly or indirectly receives this material. Investment decisions are to be made by and remain as the sole responsibility of the investor. Investment involves risks. The price of securities may go down as well as up, and under certain circumstances investors may sustain total loss of investment. Past performance should not be taken as an indication or guarantee of future performance. Unless otherwise attributed, forecasts of future performance represent analysts' estimates based on factors they consider relevant. Actual performance may vary. Consequently, no express or implied warranty can be made regarding future performance.

Any references in this report to Mizuho Financial Group, Inc. ("MHFG"), MHSC and/or its affiliates are based only on publicly available information. The authors of this report are prohibited from using or even obtaining any insider information. As a direct subsidiary of Mizuho Americas LLC and indirect subsidiary of MHFG, MSUSA does not, as a matter of corporate policy, cover MHFG or MHSC for investment recommendation purposes.

MSUSA or other companies affiliated with MHFG, Mizuho Americas LLC or MHSC, together with their respective directors and officers, may have or take positions in the securities mentioned in this report, or derivatives of such securities or other securities issued by companies mentioned in this report, for their own account or the accounts of others, or enter into transactions contrary to any recommendations contained herein, and also may perform or seek to perform broking and other investment or securities related services for the companies mentioned in this report as well as other parties generally.

Restrictions on Distribution

This report is not directed to, or intended for distribution to or use by, any person who is a citizen or resident of, or entity located in, any locality, territory, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to or restricted by law or regulation. Persons or entities into whose possession this report comes should inform themselves about and observe such restrictions.

United States: Mizuho Securities USA LLC, a subsidiary of Mizuho Americas LLC, 1271 Avenue of the Americas, 2nd Floor, New York, NY 10020, USA, contact number +1-212-209-9300, distributes or approves the distribution of this report in the United States and takes responsibility for it. Any transaction by a US investor resulting from the information contained in this report may be effected only through MSUSA. Interested US investors should contact their MSUSA sales representative.

United Kingdom/Germany/European Economic Area: This report is distributed in the United Kingdom by Mizuho International plc (MHI), Mizuho House, 30 Old Bailey, London EC4M 7AU. MHI is authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority and is a member of the London Stock Exchange. This report is distributed in Germany by Mizuho Securities Europe GmbH (MHEU), Taunustor 1, 60310 Frankfurt, Germany. MHEU is authorised and regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht (BaFin). This report may be distributed in other member states of the European Economic Area by MHI and MHEU. For the avoidance of doubt this report is not intended for persons who are Retail Clients within the meaning of the FCA's or the BaFin's rules.
