Lots Of FEMO In Q3's Earnings Reporting Season

By Ed Yardeni & Elias Griepentrog • 8 Oct 2026

View in browser

Photo by Taya Dianna / Unsplash

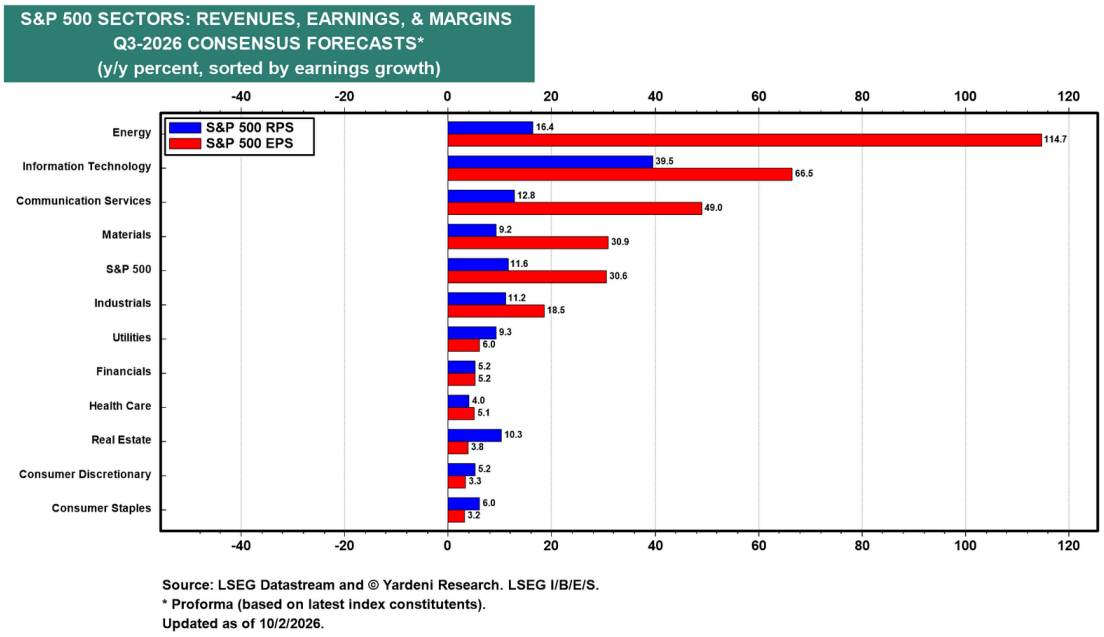
I. FEMO in Q3

We have spent much of the past few months marveling at Corporate America's Fabulous Earnings Momentum (FEMO). S&P 500 earnings per share growth approached 30% y/y in Q1 and accelerated to more than 50% in Q2, although unusually large mark-to-market investment gains boosted both figures. Even excluding those gains, earnings grew roughly

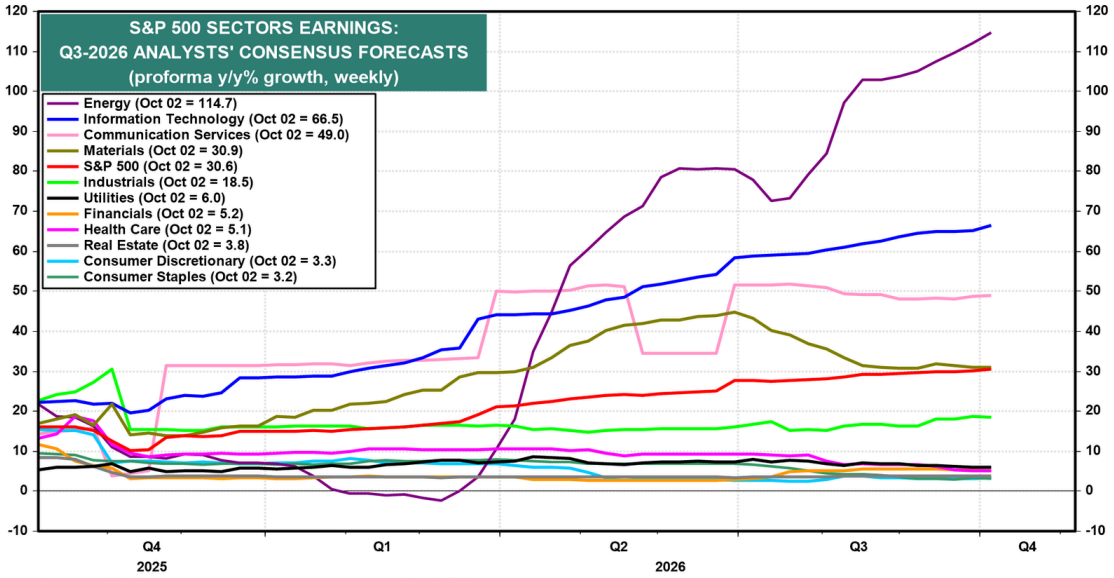
20% and 25%, respectively. Q2 also marked the fifth consecutive quarter with record earnings.

Q3 is shaping up to be another blockbuster quarter. As Joe reported this week, industry analysts' consensus forecast for Q3-2026 S&P 500 EPS growth started the quarter at an already remarkable 27.6% y/y. Rather than declining as it typically does during the quarter, it climbed 3.0 ppts to 30.6%. The level of expected Q3 EPS rose 2.2% over the quarter, ranking as the 12th-largest upward revision in the 130 quarters since Q2-1994. That's no small feat!

Better yet, FEMO is broadening across Corporate America. Analysts expect all 11 S&P 500 sectors to deliver positive y/y growth in both revenues and earnings. Only once before, in Q2-2021, has such a perfect sweep occurred in the 25 years we've tracked the data. Overall, S&P 500 revenues are expected to grow 11.6% y/y, compared with earnings growth of 30.6% (chart).



Energy is expected to lead Q3 earnings growth at a whopping 114.7% y/y, followed by Information Technology, Communication Services, and Materials (chart). Energy's expected earnings growth has surged from negative territory earlier this year, while Information Technology's has climbed steadily, reflecting the AI investment boom.

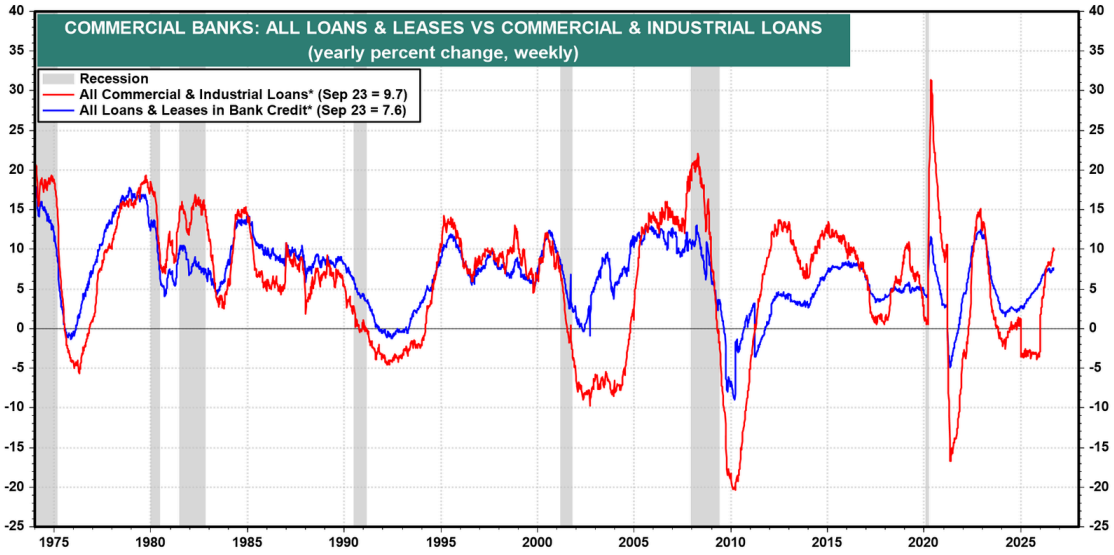


Source: LSEG Datastream and © Yardeni Research. LSEG I/B/E/S.
* Growth rates are proforma, assumes current index members were in the index a year earlier (apples-to-apples comparisons).

II. Financials in Q3

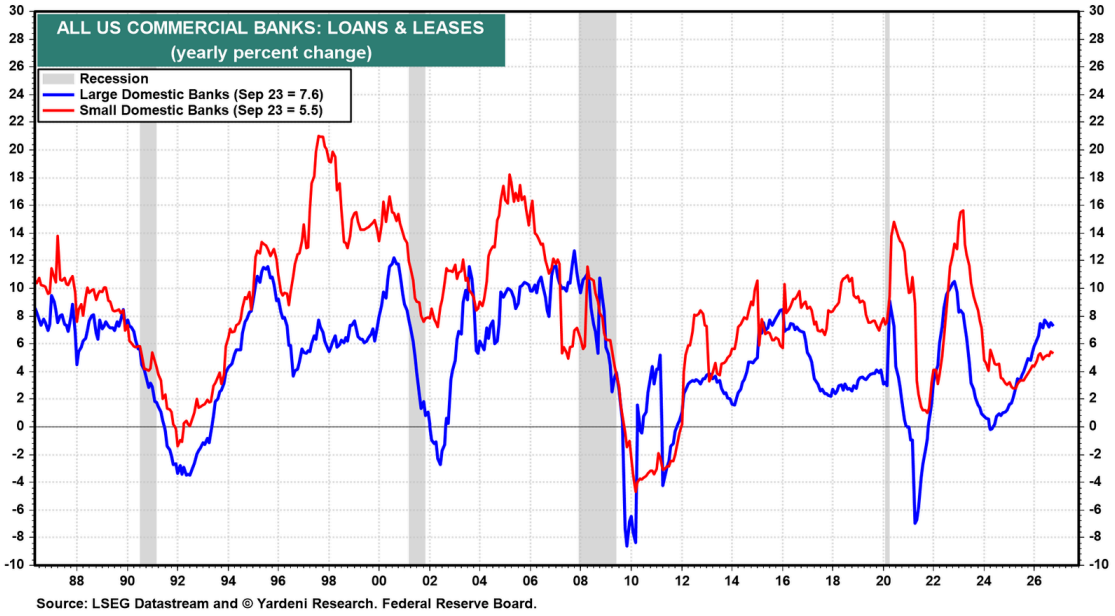
Q3 earnings season kicks off next week with the big banks. The latest banking data suggest there is plenty to be optimistic about.

Commercial and industrial loans rose 9.7% y/y during the week of September 23, while total bank loans and leases increased a robust 7.6% (chart). Both point to strong bank lending.

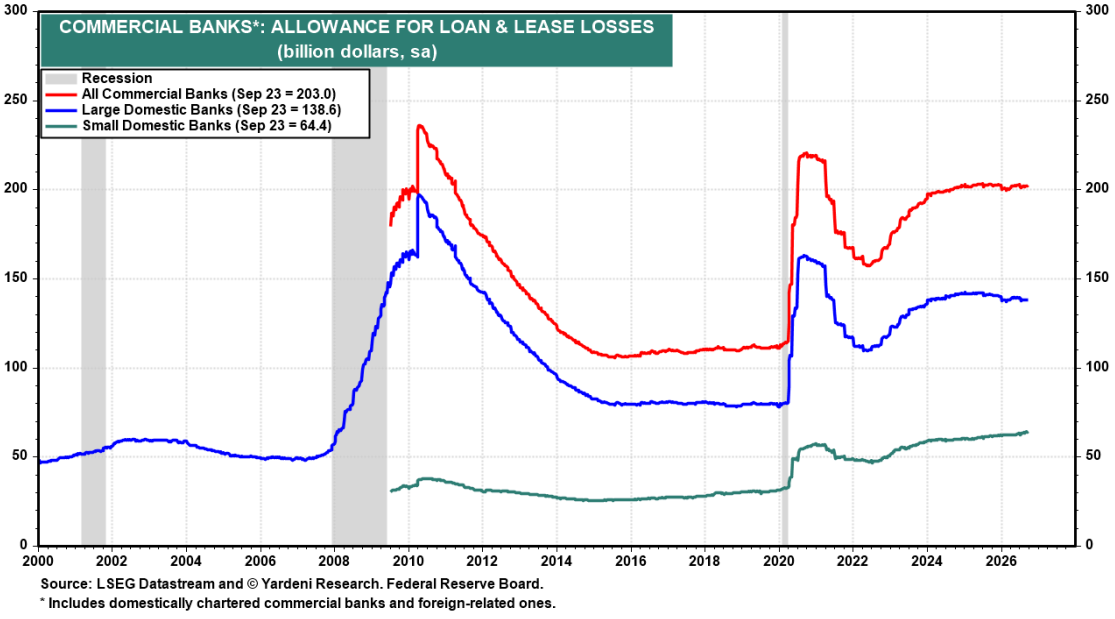


Source: LSEG Datastream and © Yardeni Research, and Federal Reserve Board.
* Includes domestically chartered commercial banks and foreign-related ones.

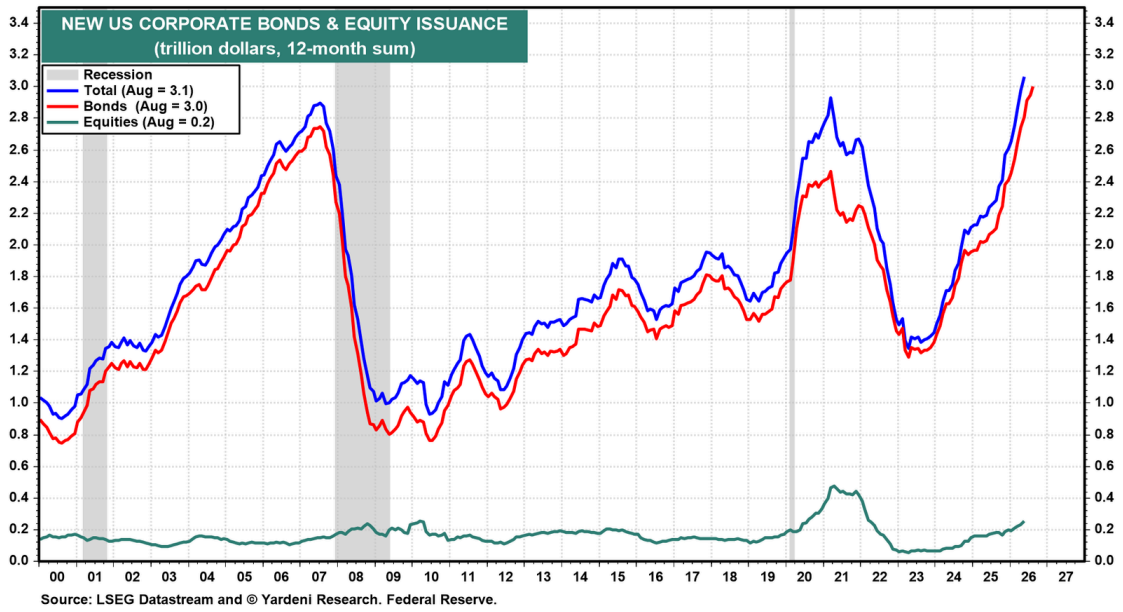
Large domestic banks are leading the charge, with loan growth of 7.6% y/y compared with 5.5% at smaller banks (chart). Strong bank lending is another reflection of a resilient economy.



Commercial banks' allowances for loan and lease losses stood at $203 billion during the week of September 23, little changed over the past two years, confirming that banks do not see a deterioration in credit quality.

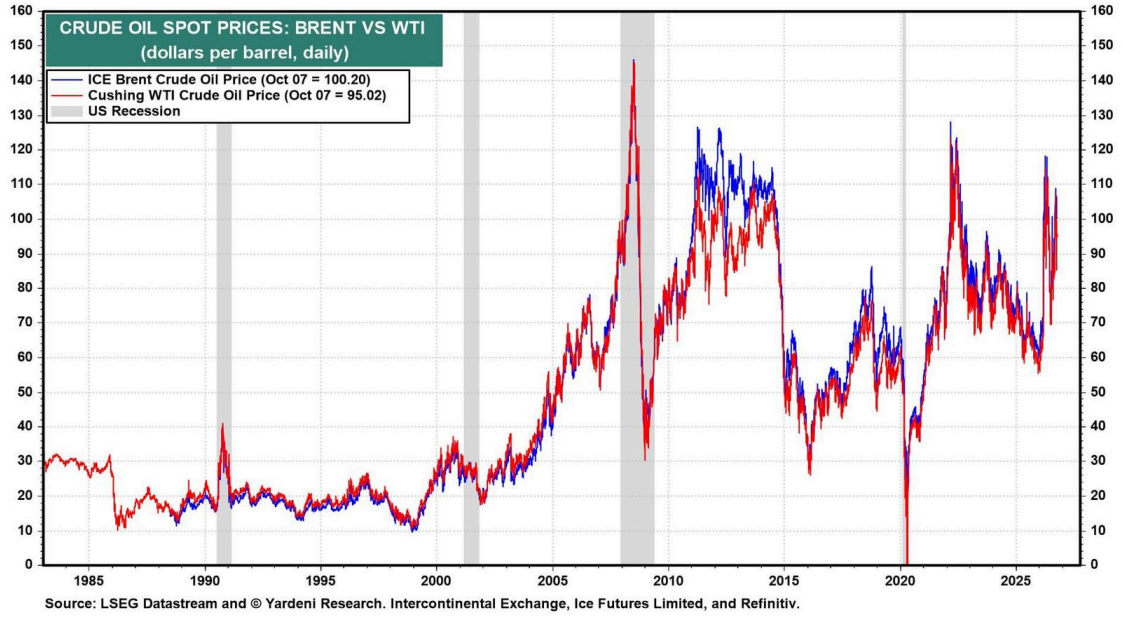


Meanwhile, new US corporate bond and equity issuance reached a record $3.1 trillion over the 12 months through August (chart). That's good news for investment banking activity and another sign of robust demand for capital across Corporate America.

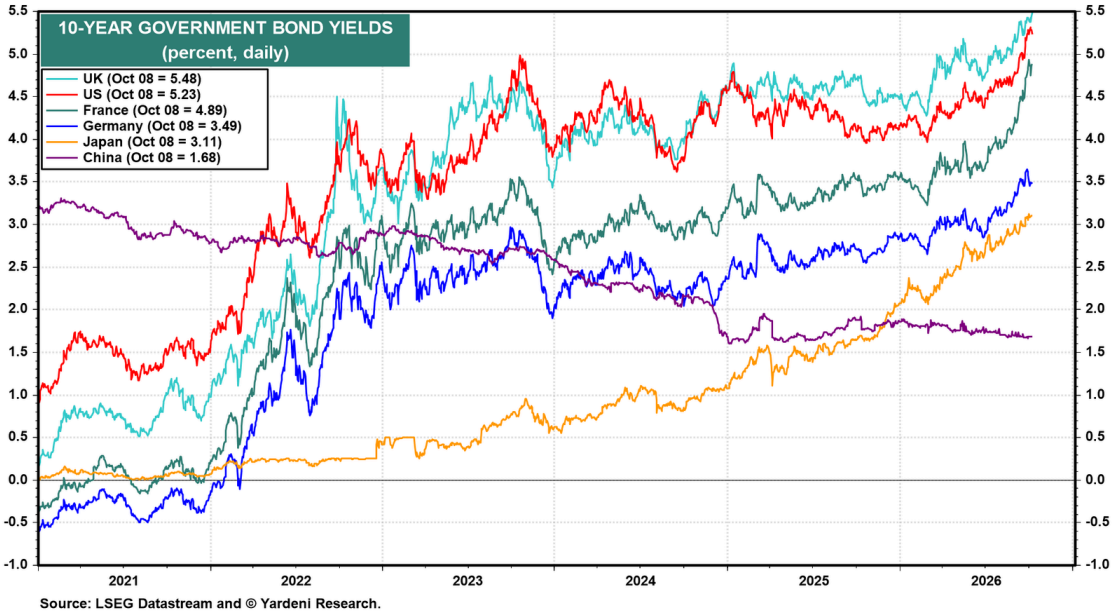


III. What could go wrong?

All this sounds bullish, and it is! But our worry list remains long, not least because of the ongoing conflict in the Middle East. The bid-ask spread between Washington and Tehran remains wide. The risk of a military re-escalation is increasing. For now, we expect energy prices to remain higher for longer, keeping inflation and bond yields elevated (chart).



Meanwhile, global bond yields keep rising (chart). In the US, stronger nominal GDP growth and a higher neutral rate partly explain the rise. The energy shock, the unwinding yen-carry trade, and mounting concerns about fiscal excesses are adding fuel to the fire. In France, the Bond Vigilantes are pushing yields above nominal GDP growth amid high debt, weak growth, and political gridlock. The risk is contagion across Europe.



Other worries include second-round inflation effects, more aggressive Fed rate hikes, rising US debt-service costs, an AI investment slowdown, post-midterm political gridlock, and mega IPOs draining liquidity from the stock market.

Against this backdrop, we recently moved our 8,400 target for the S&P 500 from the end of this year to the middle of next year. Importantly, we haven't lowered our earnings outlook. S&P 500 forward EPS reached a record $406.45 on October 1, and we still expect it to climb to $425 by year-end (chart). Instead, we reduced our target forward P/E from 19.8 to 18.6 to reflect valuation risks.

Morgan Stanley | RESEARCH

UPDATE

October 8, 2026 11:00 AM GMT

Largan Precision | Asia Pacific

3Q26 Results Miss on Lower GPM, but FAU/CPO Development Well on Track

AlphaSignals Earnings Reaction

Unchanged	**Meaningful shortfall**	**Modest revision lower**
Impact to our thesis	Financial results versus consensus	Direction of next 12-month consensus EPS

Source: Company data, Morgan Stanley Research

Key Takeaways

- 3Q26 gross margin is 42.2%, which is lower-than-expected and triggers a 31-36% GP and OP miss vs. our estimates.
- Revenue is likely to be flat MoM in October and decline sequentially in November.
- CPO-related (FAU) has seen good progress with new product verification passed.

Largan reported 3Q26 net income of NT$5.182bn, down 27% YoY.

The company reported a 11% YoY revenue decline, to NT$15.651bn; gross margin declined YoY and QoQ to 42.2% in 3Q26, lower than expected due to lower new-project yields and structural green electricity cost hikes.

Management expects shipments to be flat MoM in October and decline sequentially in November as order momentum is weaker-than-expected.

FAU/CPO development well on track: First FA project passed customer verification; expanding from FA into FAU, including coupling and potential FAU-to-carrier assembly, with a dedicated new facility expected to support mass production from around mid-2027. We maintain our long-term positive view on Largan's FAU/CPO opportunities.

Valuation Methodology and Risks

Largan Precision (3008.TW)

Base case: Our price target is based on an SOTP valuation, comprising the traditional business and potential FAU opportunity. We value the traditional business using a residual income model, consistent with our Greater China Hardware Tech coverage, assuming an 8.5% cost of equity, a 7% net profit CAGR over 2026-36E and a 3% terminal growth rate. We separately value the FAU business, assuming a 40% market share in 2028.

Risks to Upside

- Better-than-expected high-end smartphone demand
- Faster-than-expected penetration of periscopes
- Stronger-than-expected CPO volume growth

Risks to Downside

- Greater-than-expected competition, which would erode Largan's ASP and gross margin
- Weaker-than-expected smartphone demand, especially for high-end models
- Market share gains and more pricing pressure from Sunny
- Weaker-than-expected CPO volume growth

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: AAC Technologies Holdings, Accton Technology Corporation, Acer Inc., Asustek Computer Inc., AU Optronics, BYD Electronics, Compal Electronics, E Ink Holdings Inc., Eoptolink Technology Inc Ltd, Giga-Byte Technology Co. Ltd., GoerTek Inc, Hon Hai Precision, Innolux, Lenovo, Lingyi Itech Guangdong Co, Quanta Computer Inc., Xiaomi Corp, Yageo Corp., Zhen Ding.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality

of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.
Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.
Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of September 30, 2026)
The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.
For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

	Coverage Universe		Investment Banking Clients (IBC)			Other Material Investment Services Clients (MISC)	
Stock Rating Category	Count	% of Total	Count	% of Total IBC	% of Rating Category	Count	% of Total Other MISC
Overweight/Buy	1599	43%	455	48%	28%	783	44%
Equal-weight/Hold	1563	42%	394	42%	25%	763	43%
Not-Rated/Hold	2	0%	1	0%	50%	1	0%
Underweight/Sell	570	15%	96	10%	17%	227	13%
Total	3,734		946			1774	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.
In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.
Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.
Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

Important Disclosures for Morgan Stanley Smith Barney LLC Customers

Important disclosures regarding any material conflict of interest that can reasonably be expected to have influenced Morgan Stanley Smith Barney LLC's choice of a third-party research provider or the subject company of a third-party research report, are available on the Morgan Stanley Wealth Management disclosure website at www.morganstanley.com/online/researchdisclosures. For Morgan Stanley specific disclosures, you may refer to https://www.morganstanley.com/eqr/disclosures/webapp/generalresearch.

Each Morgan Stanley research report is reviewed and approved on behalf of Morgan Stanley Smith Barney LLC. This review and approval is conducted by the same person who reviews the research report on behalf of Morgan Stanley. This could create a conflict of interest.

Other Important Disclosures

Morgan Stanley Research policy is to update research reports as and when the Research Analyst and Research Management deem appropriate, based on developments with the issuer, the sector, or the market that may have a material impact on the research views or opinions stated therein. In addition, certain Research publications are intended to be updated on a regular periodic basis (weekly/monthly/quarterly/annual) and will ordinarily be updated with that frequency, unless the Research Analyst and Research Management determine that a different publication schedule is appropriate based on current conditions.

Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley produces an equity research product called a "Tactical Idea." Views contained in a "Tactical Idea" on a particular stock may be contrary to the recommendations or views expressed in research on the same stock. This may be the result of differing time horizons, methodologies, market events, or other factors. For all research available on a particular stock, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Morgan Stanley Research is provided to our clients through our proprietary research portal on Matrix and also distributed electronically by Morgan Stanley to clients. Certain, but not all, Morgan Stanley Research products are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience. For access to all available Morgan Stanley Research, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Any access and/or use of Morgan Stanley Research is subject to Morgan Stanley's Terms of Use (http://www.morganstanley.com/terms.html). By accessing and/or using Morgan Stanley Research, you are indicating that you have read and agree to be bound by our Terms of Use (http://www.morganstanley.com/terms.html). In addition you consent to Morgan Stanley processing your personal data and using cookies in accordance with our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html), including for the purposes of setting your preferences and to collect readership data so that we can deliver better and more personalized service and products to you. Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Jack-of-all-trades for bespoke testing solutions in the semiconductor industry

We initiate coverage of Hermes Testing (HTSI) with a Buy rating and NT$8,880 PT. HTSI is uniquely positioned to benefit from two key semiconductor testing trends: shift-left testing and the emerging CPO testing market. Leveraging its long-standing relationship with TSMC, HTSI has established capabilities across electrical test engineering, customised test equipment, thermal control modules, probe cards, and CPO testing solutions. We forecast revenue growth of 127%/152%/78% in 2026E/27E/28E, driven by increasing adoption of thermal control modules for wafer-level test and initial deployment of CPO insertion 2 and insertion 3 test equipment through ficonTEC. Additional 2028E growth drivers include reflow tools, laser clean solutions, and MEMS probe cards. The stock trades at 27/15x 2027/28E PE, versus ~35x NTM PE for handler-equipment peers, offering re-rating potential as sales scale, new products are qualified, and its CPO presence expands. See our companion testing deep dive sector note.

Shift-left beneficiary with exceptional thermal control modules

Thermal control modules should be HTSI's largest growth driver over the next several years. We expect increasing chip power consumption, rising package complexity, and tighter probe pitches to drive adoption of advanced thermal control solutions used alongside leading-edge probers, in additional to more wafer level insertions and longer test time. We estimate HTSI will ship approximately 3,000 thermal-control modules in 2027E, up from around 1,200 units in 2026E, sales contribution rise from ~30% in Q226 to >50% of sales by 2027E. The launch of its second-generation platform in 2027E, which carries 25-50% higher ASPs, should further improve profitability. We forecast GM expansion from 55.5% in 2026E to 58.3%/60.0% in 2027E/28E.

Unique position to capture CPO upside

Through its partnership with German optical-automation leader ficonTEC, HTSI is positioned to participate in the initial ramp of CPO testing equipment. HTSI supports local manufacturing, installation, automation and after-sales service, making it a key enabler of volume production. We estimate HTSI captures approximately 30% of equipment value across the 40 insertion 2 and 70 insertion 3 systems we forecast for delivery in 2027E, with further potential upside in 2028E as adoption expands.

Valuation: initiate coverage with a Buy rating and price target NT$8,880

We forecast EPS of NT$29.1 in 2026E (including a one-off employee share purchase programme impact), rising to NT$153.3/286.5 in 2027E/28E. Our NT$8,880 price target is based on 31x average 2028E PE, versus handler-equipment peers forward PE at roughly 35x, reflecting HTSI's unique exposure to both shift-left testing, CPO, and our estimate of 32% LT earnings CAGR. We initiate with a Buy rating.

UBS Research THESIS MAP a guide to our thinking and what´s where in this report

PIVOTAL QUESTIONS

Q: Will HTSI be able to keep its moat within chip probing thermal control modules?
Yes. We expect HTSI's competitive position to strengthen as chip power consumption, package complexity, and probe density continue to increase. The company is developing next-generation thermal control solutions, including liquid cooling technologies, while also expanding into specialized chuck solutions designed to address wafer warpage. In addition, HTSI's close collaboration with TSMC, TEL, Advantest, and other OSATs should reinforce its position within advanced wafer-level testing.

Q: Will insertion 2 of CPO testing process be skipped?
No. We believe concerns surrounding insertion 2 adoption are overdone. While some industry participants favor bypassing insertion 2 due to throughput and ROI considerations, doing so increases the risk of defective optical engines being identified only after the components are delivered to OSATs, creating yield accountability challenges and higher packaging losses. Based on our industry studies, we expect insertion 2 testing to remain an important part of the CPO workflow over at least the next two years as the industry focuses on improving PIC yields and overall testing efficiency.

UBSVIEW

We initiate coverage of Hermes Testing (HTSI) with a Buy rating and NT$8,880 price target. HTSI offers unique exposure to two of the semiconductor testing industry's most attractive growth drivers: 1) shift-left testing and 2) CPO testing. The industry's shift-left testing strategy will have more test insertions move to the wafer level before packaging, in addition to longer CP time. Leveraging its longstanding relationship with TSMC, HTSI has established capabilities across thermal control modules, electrical-test engineering services, customized equipment, and emerging CPO testing solutions. We believe there could be re-rating potential as sales scale, new products are qualified, and its CPO presence expands.

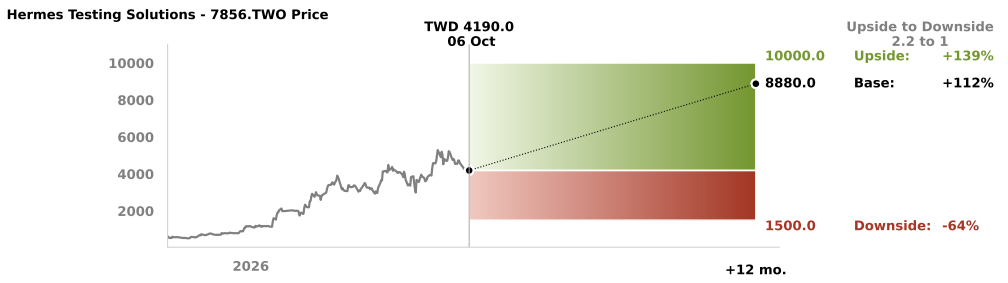
EVIDENCE

TSMC and OSATs have been expanding their CoWoS capacities aggressively, from 40kwpm in 2024 to around 90 kwpm in 2025, and is tracking to expand CoWoS capacity toward 160kwpm in 2026E. TSMC also ramped up expanding N3/N2 capacity, with multiple product launches from customers' pipelines—Nvidia's Rubin, AMD's MI400 series/Venice CPU and other cloud ASICs—translating into foreseeable, strong testing demand.

WHAT´S PRICED IN?

Despite a 264% YTD share-price increase, HTSI currently trades at just 15x of our 2028E EPS versus handler-equipment peers forward PE at roughly 35x. We believe market expectations for 2027 CPO testing equipment shipments remain conservative, particularly for insertion 2 equipment. Based on our industry analysis, we estimate HTSI will deliver 40 insertion 2 and 70 insertion 3 systems in 2027E, this should be higher than the market's expectation of no insertion 2 and limited insertion 3 shipment due to engineering bottleneck. We also see further upside in 2028E as CPO adoption expands. Our reverse DCF analysis indicates that the current market price implies only a 17% long-term sales CAGR vs our estimate of 27% and long-term GM level of 33% vs our estimate of 61%. We see scope for re-rating.

UPSIDE/DOWNSIDE SPECTRUM



Value drivers (2027/28E)	Thermal control module shipments	CPO insertion 2 & 3 shipments	GM

COMPANY DESCRIPTION

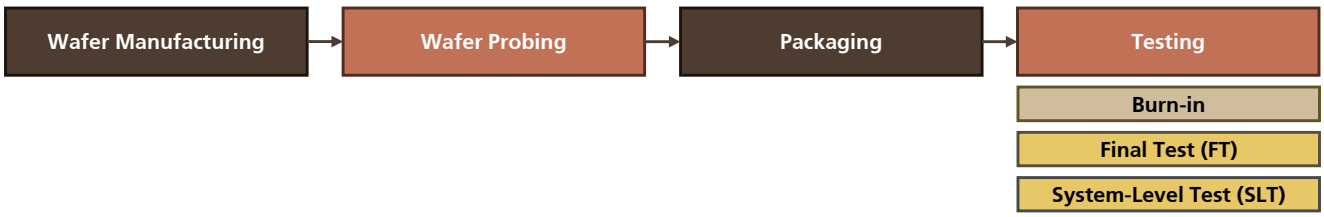
Hermes Testing Solutions (HTSI) was founded in 2004 in Hsinchu, Taiwan. It focuses on providing semiconductor testing and inspecting solutions, equipment installation, technical support, and maintenance services. Its main business segments are customized semiconductor equipment, engineering services, and probe cards and other materials.

Testing TAM expanding with IC complexity: leaders likely to outperform industry growth

Our central view is that testing content per AI accelerator is growing faster than semiconductor unit volumes, creating a multi-year expansion in testing TAM. We believe semiconductor testing is entering a period of structural growth as AI-driven chip complexity increases testing intensity across wafer, package and system levels. The industry's shift-left strategy, which moves more testing upstream in the semiconductor manufacturing process, is resulting in longer and more frequent test insertions. As cloud AI GPUs and ASICs become increasingly complex, additional testing is required to ensure functionality, performance and yield, while reducing defective parts per million (DPPM). More robust testing should improve deployment efficiency and lower the cost of operating AI infrastructure.

Semiconductor testing generally comprises four stages: wafer/chip probing (CP), final test (FT), system-level test (SLT), and burn-in. CP is conducted at the wafer-level before packaging, while FT, SLT, and burn-in occur after packaging. The below Figure 3 illustrates the semiconductor manufacturing flow.

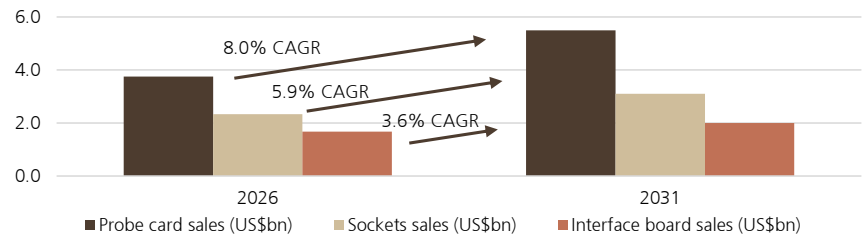
Figure 1: Semiconductor testing process: from wafer level to package level



Source: UBS

We estimate semiconductor testing historically accounts for ~1% of total semiconductor revenue. Within testing, consumables such as probe cards, sockets and interface boards represent ~10-15% of industry revenue. According to Yole, the probe card, socket and interface board markets should grow from US$3.8bn, US$2.3bn and US$1.7bn in 2026 to US$5.5bn, US$3.1bn and US$2.0bn by 2031, respectively.

Figure 2: Yole estimating testing consumables TAM to climb in the next 5 years



Source: Yole, UBS

Nonetheless, leaders within the testing sector will standout among competition, with greater sales CAGR comparing to the industry.

We see **HTSI**'s sales for the next few years to mainly be driven by 1) thermal control module shipment and 2) CPO equipment shipment. In the past, thermal control modules weren't necessary for chip probing, due to less TDP for the chips. However, as new iterations of AI accelerators now got substantial power draw, this unlocks a brand new TAM for HTSI to enter with their thermal control modules to pair with probers, in order to prevent probe card damages.

- **Robust thermal control module shipments.** We estimate HTSI to ship 3,000/4,100 thermal control modules in 2027E/28E, with continuous demand in future years, bringing their 2026-31E semiconductor equipment sales CAGR to 48%.

- **Thermal control module ASP expansion.** Gen 2 thermal control modules will start to ship in 2027E which will drive tool ASP up around 25-50%.
- **Demand supported by Advantest expansions.** We believe the 3,000 thermal control modules shipment forecast for 2027E is not far-fetched, as we read-across from Advantest's announced capacity expansion plan (testers will be paired with probers with a 1:1 ratio) with increasing capacity up to 5,000 testers within FY2027/3 and they also announced a 10,000-unit target within CY2028. Although the testers capacity expansion plan includes testers for final test, we do see a good portion to be allocated to chip probing given shift-left testing trend increasing both testing insertions and testing time before chip packaging.
- **CPO is another brand new TAM for semiconductor testing.** As insertion 2 and 3 testing equipment demand starts to rise in 2027 with scale-out CPO adoption, we see HTSI to ship 40/70 insertion 2 and 3 equipment in 2027E, with this number growing in 2028E to 80/160 and higher in future years as CPO proliferates, and driving 52% 2026-31E test equipment & engineering services sales CAGR.
- **CPO to see content increase.** Gen 2 insertion 3 equipment may start to ship in 2027E, with higher throughput and tool ASP.
- **Insertion 2 might scale down, but not happening anytime soon.** Insertion 2 equipment shipment might come down in 2029E and beyond, as foundries scale-up yield for photonic IC (PIC) in order to lessen the time consuming insertion 2 testing burden.

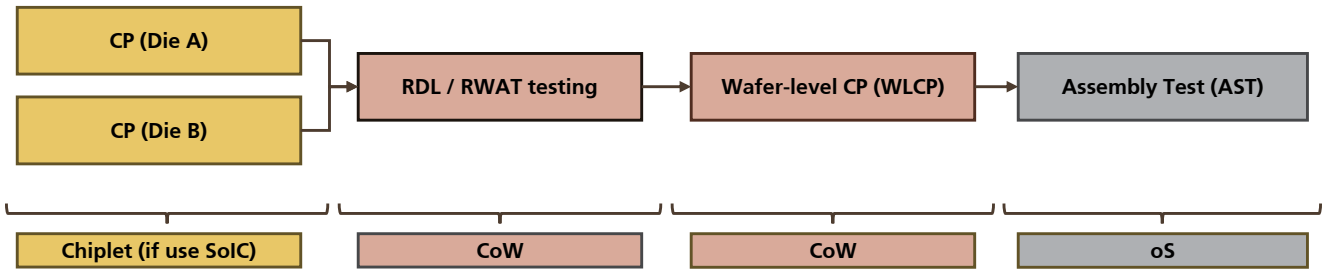
Robust growth drivers across semiconductor testing

We believe HTSI is set to benefit from several semiconductor testing growth drivers and capture the AI induced, expanding testing TAM. We see HTSI is uniquely positioned as the main beneficiary of two of the strongest growth drivers within semiconductor testing: testing shift-left and CPO.

Shift-left igniting secular growth for chip probing

The industry's adoption of shift-left testing should drive a multi-year structural growth opportunity for chip probing (CP) and its supply chain. As advanced packaging costs rise and AI accelerators become increasingly complex, semiconductor manufacturers are placing greater emphasis on identifying known-good dies (KGD) before packaging.

Figure 4: CP is set to grow substantially with shift-left, each packaging step set to be MORE costly than the prior step

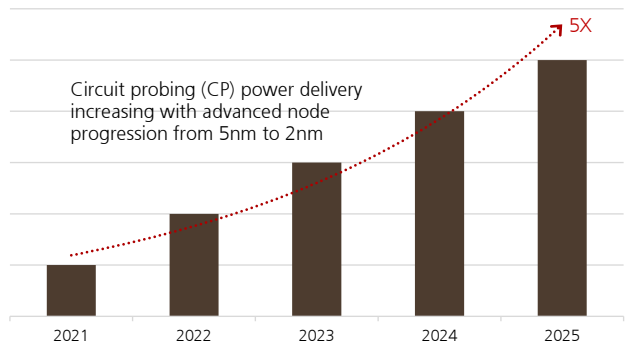


Source: UBS

The economics of advanced packaging reinforce this trend. Heterogeneous integration, chiplet architectures and 2.5D/3D packaging significantly increase package value, while defects identified late in the manufacturing process can lead to substantial scrap costs. To mitigate this risk, foundries and OSATs such as TSMC and ASE employ distributed testing flows incorporating KGD, known-good-stack (KGS) and assembly test screening, to catch defects before the components enter a multi-week packaging cycle (>2 weeks for CoW and 2 weeks for oS). The importance of these tests rises as AI clusters become increasingly dependent on component reliability and low defective-parts-per-million (DPPM) rates. Given the multiplicative yield degradation, a 300bps yield decline at just one manufacturing stage (e.g. dropping from 99.5% to 96.5%) reduces overall integrated four-stage yield from 98.0% to 95.0%; on a 500,000 unit ramp at US $10,000 per unit, this 3% scrap delta translates into around US$150m in unrecoverable losses given >6-month manufacturing lead times.

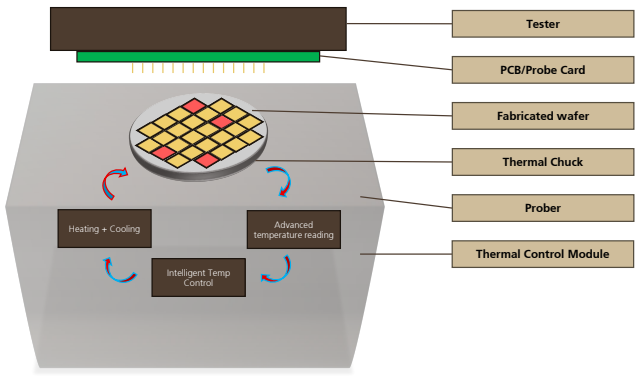
At the same time, rising chip power consumption is increasing the technical difficulty of wafer-level testing. As chip thermal design power scales beyond 1,000W and power density is expected by the industry to surge another 8x by 2030, traditional wafer-level chip probe (WLCP) encounters severe physical bottlenecks. Finer probe pitches and higher power densities increase the risk of overheating, probe needle burnout and yield degradation, creating demand for more advanced probing and thermal-control solutions.

Figure 5: CP power delivery trend rises with process tech evolution



Source: UBS

Figure 6: Thermal control module inside probers are essential to control wafer temperature



Source: UBS

Hermes Testing (HTSI) is a key beneficiary of this trend. Leveraging its long-standing relationship with TSMC and expertise in semiconductor test solutions, HTSI supplies advanced thermal control modules used alongside leading-edge probers (made by Tokyo Electron), particularly for AI applications. These thermal control modules are required for high TDP semiconductor wafer probe in order to maintain the temperature

of the chuck to avoid needle burns or probe card damages. We estimate HTSI will ship approximately 3,000 thermal-management modules in 2027E, up from 1,200 in 2026E, supporting sales growth of 127%/152% in 2026E/27E. HTSI is also the partner for prober installation, prober maintenance and services. In addition, HTSI provides high-end chuck processing services, an area that should benefit from increasing package sizes and higher wafer warpage associated with advanced packaging.

Beyond thermal control modules, HTSI also supplies consumables and customised solutions for wafer-level testing, including probe card cleaning sheets and laser-based probe head cleaning systems. As probing intensity increases under the shift-left testing model, demand for cleaning and maintenance solutions should rise alongside probe card utilisation. Currently, cleaning sheets is around 5% of sales, but we believe it could gain traction in 2027/28E and beyond. We see additional upside from future modular laser cleaning systems that could be integrated directly with probers, further expanding HTSI's content opportunity within advanced wafer-level testing.

CPO testing fuelling future growth for semiconductor testing

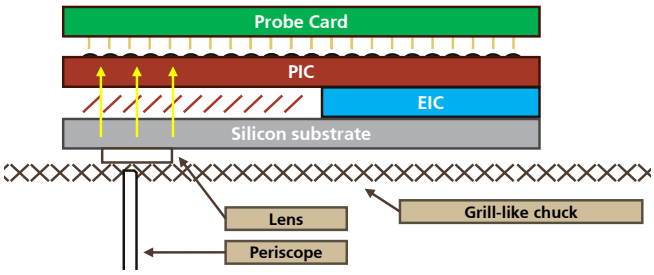
As interconnect bottlenecks increasingly shift from the memory wall to the copper wall, we believe co-packaged optics (CPO) adoption is inevitable over the longer term. Testing remains one of the key bottlenecks to CPO deployment, as optical validation differs fundamentally from the electrical testing processes that have dominated semiconductor manufacturing for decades. As a result, CPO is creating a new testing opportunity across the semiconductor equipment and consumables ecosystem. We have written extensively on CPO and opportunities that it brings to the semiconductor supply chain, see our CPO deep dive, our thoughts on CPO timing, 2026 SiPhIA conference takeaways, and SEMICON 2026 takeaways.

Various test equipment suppliers are scrambling to come up with ideal testing equipment across the four insertions of CPO testing, with solutions to ensure both optical and electrical signal integrity of the CPO solutions. The four insertions are:

- **Insertion 1: Electronic IC (EIC)/Photonic IC (PIC) test.** Single-side wafer test that has dedicated probe cards to test the fabricated EIC/PIC wafers.
- **Insertion 2: Optical/Electrical test.** Double sided wafer test, testing the hybrid bonded (e.g. via TSMC's COUPE) EIC and PIC wafers by an opto-electrical test that verifies the electrical signals on the top and optical signal on the bottom of the hybrid bonded wafers.
- **Insertion 3: Optical engine (OE) test.** The OE tests are done to ensure the quality of the OEs and with FAU (Fiber Array Unit) attached, to ensure the signal integrity of the OEs. The testing equipment needs to be able to handle 224G per channel data rates, requiring high unit per hour (UPH) throughput, meticulous dirt mitigation, and maintaining a near 100% contact rating on high-speed sockets.
- **Insertion 4: ASIC final test.** This final test step is established post the OEs are packaged together with the ASIC. The complete ASIC package (now with CPO) is now tested for opto-electrical functionalities.

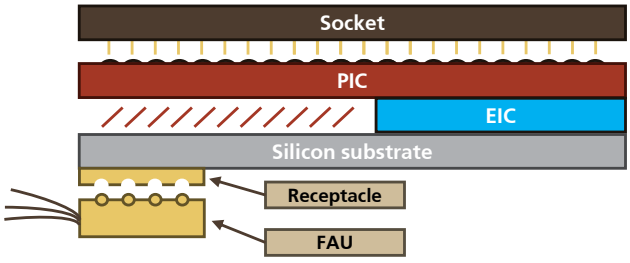
As it stands, insertion 2 and insertion 3 are the two areas where there are the most debates in the industry. Insertion 3 suppliers such as Chroma has noted the trend of "shift-to-middle" paradigm centered on insertion 3. In high-density scale-out switches deploying up to 32 optical engines (e.g. Nvidia's Spectrum-X architectures), any OE defect results in package scrap at the CoWoS level, making 100% known good die (KGD) validation at the singulated OE stage an absolute commercial requirement.

Figure 7: An illustration for insertion 2 test method



Source: UBS

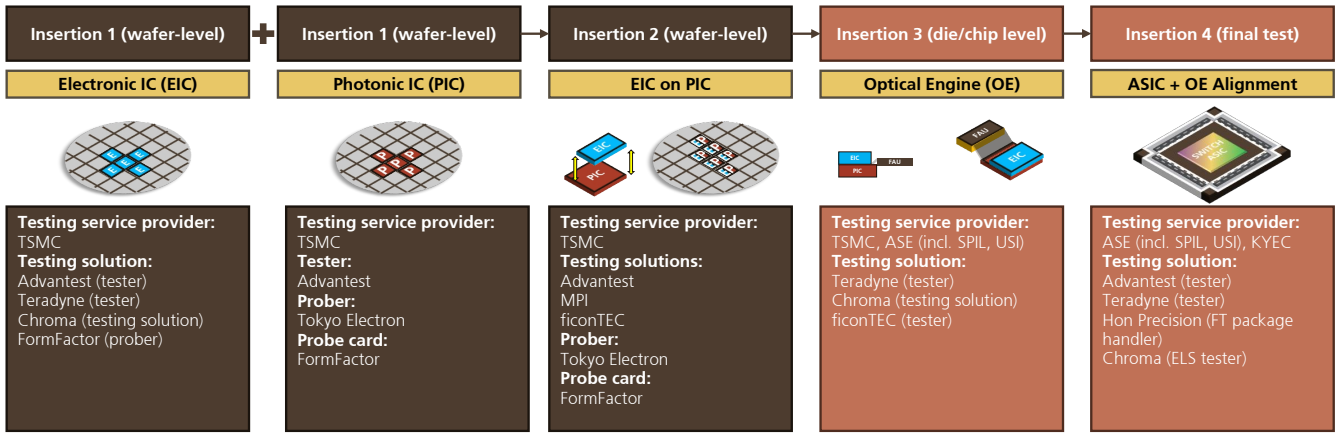
Figure 8: An illustration for insertion 3 test method



Source: UBS

As shown in the below figure, as there are no set standards for the testing equipment, throughput and stability are now the main target and area of competition for the major players in the field. Notable ones for each insertions are listed.

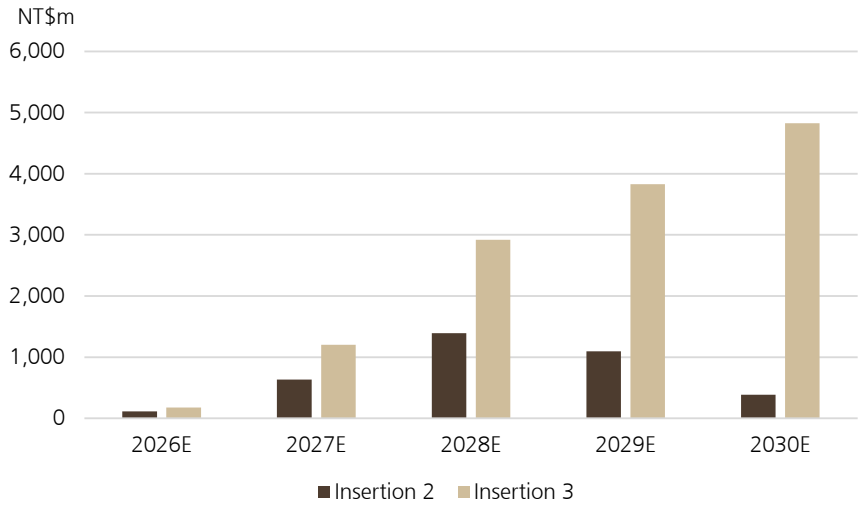
Figure 9: CPO testing flow chart with key suppliers



Source: UBS

With its 25 years of precision test equipment expertise, ficonTEC is an early mover for CPO test equipment and has key know-how for optical alignment, which is quintessential for optical test. **HTSI**, through its partnership with ficonTEC, is set to be a major beneficiary once CPO proliferates in 2027E-28E. As the partner of ficonTEC, Hermes Testing is the key enabler that can help ficonTEC achieve HVM for its CPO testing equipment. As of now, our view is that both insertion 2 and insertion 3 should be required within the next two years, despite the difficulties surrounding double-sided wafer probing (insertion 2), as the yield for OEs are still not high enough to avoid defective dies. Finding out known-good OEs will be crucial before the FAU coupling process during the latter stages of CPO packaging, to prevent impeding the final package with multiple OEs attached to the switch ASIC (e.g. 32 OEs on Nvidia's Spectrum-X). We estimate Hermes Testing will ship 40/70 units of insertion 2/3 testing equipment in 2027E, with potential upside to the numbers as we view Hermes Testing will likely assist with the ramp up for Gen 2 insertion 3 equipment in 2027E. Gen 2 insertion equipment will come with better throughput and ASP.

Figure 10: We believe HTSI CPO equipment sales will pick up in 2027/28E with 541%/135% YoY growth



Source: UBS estimates

Beyond insertions 2 and 3, HTSI is also positioned to participate in insertion 1 testing through customised prober solutions for photonic integrated circuit (PIC) testing. We believe these solutions could eventually be packaged as licensable intellectual property, creating an additional long-term growth opportunity as CPO adoption broadens. While near-term testing growth is driven by AI accelerators, CPO represents the next major expansion cycle for semiconductor testing. We believe HTSI is uniquely positioned to participate across multiple test insertions, providing exposure to a potentially significant source of incremental revenue beginning in 2027E.

Figure 11: A switch chip with 32 OEs and the CPO packaging supply chain

HTSI's unique position for new TAM of thermal control modules and CPO test equipment

Hermes Testing Solutions (HTSI) was founded in 2004 in Hsinchu, Taiwan, as a spin-off from Hermes-Epitek. The company provides semiconductor testing and inspection solutions, engineering services, customized equipment, and test consumables. HTSI maintains a global service footprint across Taiwan (Hsinchu, Tainan), Mainland China (Suzhou), Japan (Tokyo, Kumamoto), Singapore, Malaysia, and the United States (Arizona), enabling close support for leading semiconductor customers.

Its main business segments are structured around three pillars:

- **Semiconductor equipment and customized products:** HTSI utilises a dual-track strategy of independent R&D and also equipment agency sales. They offers

highly customized solutions designed to address specific client pain points and bottlenecks. Key products include: thermal control modules that pair with a 1:1 ratio with wafer-level test probers, electron beam inspection equipment, white light interference optical inspection systems, laser probe cleaning machines, and the SYMPHONY fluxless reflow system.

- **Testing equipment engineering services:** The company operates the largest engineering service team in Taiwan, consisting of over 340 technical professionals. The engineering service team provides extensive equipment life-cycle support, including installation, relocations, modification, testing, routine maintenance, and repair services. CPO related equipment sales/services will be recognized within this segment, as CPO are not direct HTSI products, but rather sales recognition via its partnership with ficonTEC.
- **Probe card design, manufacturing, and cleaning materials:** HTSI delivers a comprehensive product portfolio that supports the entire probe card life-cycle. For probe cards, they supply membrane, cantilever, and vertical probe cards. As they are small in scale, HTSI targets niche probe card applications such as RF, 5G/6G, millimeter wave, LCD driver, low end logics, TIA (Transimpedance Amplifier), etc. In addition to the three existing probe technologies, HTSI also collaborates with MJC in Japan for MEMS probe development, targeting sales in 2028E for high-end, AI/HPC related applications. Cleaning materials is another important business within this segment, as HTSI source and process sand paper or other materials to offer cleaning sheets to clean the probe cards, removing oxidations, unwanted particles and substances that accumulated on the probe cards during the testing process.

The sales resiliency in the coming years mainly stems from its robust relationship with key industry players, especially as an engineering and service provider with TSMC for testing solutions. This sets up a solid foundation for its customized equipment business, as they know the specific testing bottleneck to tackle. For instance, as Hermes-Epitek manufacturers the probers for Tokyo Electron (TEL) and HTSI helps with installation, services, and maintenance of the probers, they understand the thermal bottlenecks that the wafer-level test industry has been facing and can effectively come up with module solutions to solve this.

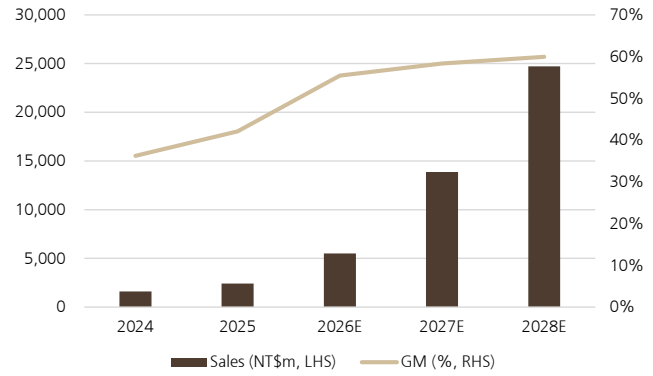
Margins set to expand with value-added products and services

The company has demonstrated strong execution in advanced wafer-level testing, with H126 revenue of NT$2.2bn already exceeding 90% of FY25 revenue (NT$2.4bn). Profitability has also improved significantly, with GM increasing from 42.1% in 2025 to 54.9% in H126.

With share of value-added products and services set to rise in 2027E in sales mix, HTSI is set to see GM and operating leverage expansion. As a niche engineering service provider that has robust ties to leading foundries and OSATs, we believe HTSI has substantial pricing power and estimate HTSI' GM for thermal control modules to be around 65%, with GM for CPO equipment of around 60% as HTSI provides an engineering-service-like business for it. We believe these factors will help the company to reach a 60% long-term GM range.

OPM is also set to expand with customized equipment sales rise in total sales mix. If we exclude the one-time expense to be recognized during Q326 for employee stock benefits (we estimate around NT$1bn), YoY opex growth will be around 99% for 2027E, with downside risk if the company conducts tight cost control measures. We forecast the company's OPM will expand from 19.5% in 2026E, to 44.3%/47.0% in 2027/28E.

Figure 12: HTSI sales set to continue to climb with 152% growth and GM at 58.3% in 2027E



Source: UBS estimates

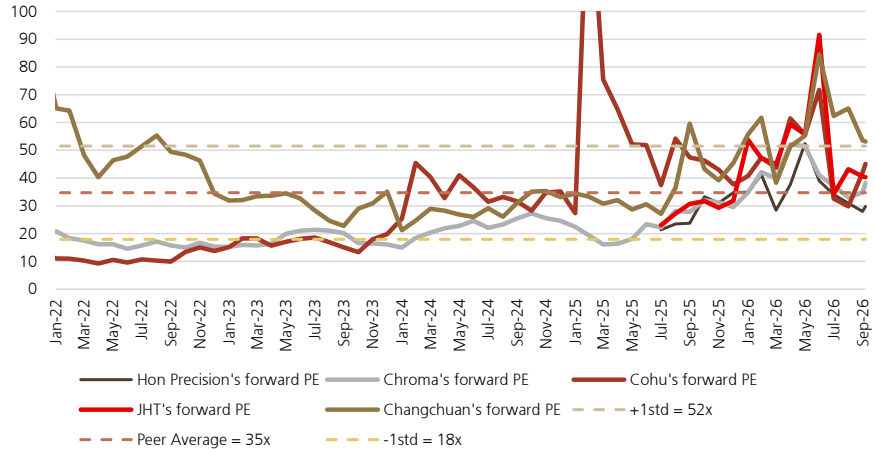
WHAT´S PRICED IN?

HTSI is trading at NT$4,190 as of 6 Oct 2026



Source: LSEG, UBS

Despite a 264% YTD share-price increase, HTSI still trades at just 15x 2028E P/E. We believe market expectations for 2027E CPO testing equipment shipments remain conservative, particularly for insertion 2 equipment. Based on our industry analysis, we estimate HTSI will deliver 40 insertion 2 and 70 insertion 3 systems in 2027E, this should be higher than the market's expectation of no insertion 2 and limited insertion 3 shipment due to engineering bottleneck. We also see further upside in 2028E as CPO adoption expands. Our reverse DCF analysis indicates that the current market price implies only a 17% long-term sales CAGR vs our estimate of 27% and long-term GM level of 33% vs our estimate of 61%. We see scope for re-rating.

We believe the market is not fully reflecting three key growth drivers:

1) Shift-left testing is still underappreciated.

As advanced packaging costs rise and AI accelerators become increasingly complex, more thorough testing is done at the wafer-level. This should drive sustained demand for HTSI's thermal control modules, probe card consumables, and other wafer-level testing solutions.

2) CPO revenue potential remains underestimated.

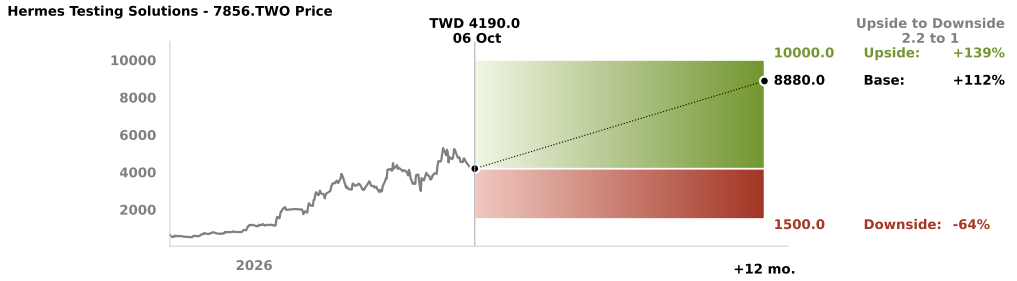
Investor expectations for 2027 CPO equipment shipments, particularly insertion 2 testing systems, remain conservative. Based on our industry studies, we forecast HTSI will deliver 40 insertion 2 and 70 insertion 3 systems in 2027E, with further potential upside in 2028E as CPO adoption broadens.

3) New products provide additional optionality.

Beyond its core businesses, HTSI is expanding into higher-value solutions including mass-reflow tools, MEMS probe cards and laser cleaning systems, creating incremental growth opportunities that we believe are largely absent from current expectations.

We value HTSI using 31x average 2028E PE, underpinned by a 32% 2027-31E earnings CAGR. We use 2028E PE as our view is that 2028 is the year for thermal control modules and CPO adoption grow from the initial ramping up stage to mass adoption stage. We believe using handlers as a peer group is justifiable for a unique company like HTSI, with thermal control modules for chip probing sharing similar characteristics as active thermal control used for final test, in addition to Hon Precision and Chroma having exposure to CPO test equipment. For equipment vendors, the peer group's average NTM PE post 2022 is around 35x, and the group is currently trading at around 41x NTM PE (see What's Priced In chart).

UPSIDE/DOWNSIDE SPECTRUM



HTSI is trading at NT $4,190 as of 6 Oct 2026

Value drivers (2027/28E)	Thermal control module shipments	CPO insertion 2 & 3 shipments	GM
NT$10,000 upside	3,300/5,000	60&100 / 100&175	61.2%/63.6%
NT$8,880 base	3,000/4,100	40&70 / 80&160	58.3%/60.0%
NT$1,500 downside	1,300/2,000	5&20 / 10&50	53.3%/54.0%

Source: UBS estimates

Risk to the current share price is heavily skewed (2.2:1) to the upside.

UPSIDE (NT$10,000): Our upside scenario reflects stronger than expected thermal module and CPO equipment shipment in 2027-28E, with additional upside from better traction of probe cards and mass reflow tools, forming 157%/91% YoY sales growth in 2027/28E and even higher operating leverage with OPM of 46.3%/50.0% in 2027/28E. This scenario implies a 34x 2028E PE, a upside driving by more equipment demand stemming for robust shift-left test induced equipment bottleneck, alongside CPO proliferation with scale-up CPO equipment pull-in in 2028E.

BASE (NT$8,880): Our price target of NT$8,880 is based on 31x 2028E PE. We expect an earnings CAGR of 32% in 2027-31E. With shift-left trend for more thermal module requirement during testing, alongside 40/70 CPO insertion 2/3 shipment. We see these growth drivers driving YoY sales growth from a high base of 127% in 2026E to 152%/78% YoY in 2027/2028E, with OPM of 44.3%/47.0% in 2027/28E.

DOWNSIDE (NT$1,500): Our downside scenario reflects lower shipment of thermal control modules due to less advanced prober demand with less insertion 2 and 3 equipment shipment due to bottlenecks with CPO production, alongside limited additional growth drivers to be picked up in 2028 such as MEMS probe card and mass reflow tools. This leads to weaker YoY sales growth of 67%/50% in 2027/28E and operating margin of 29.3%/32.0% in 2027/28E as equipment shipment fails to scale. This scenario implies a 14x 2028E PE, as valuation de-rate with dimmed outlook without CPO and limited upside from thermal control module shipments.

COMPANY DESCRIPTION

Hermes Testing Solutions (HTSI) was founded in 2004 in Hsinchu, Taiwan. It focuses on providing semiconductor testing and inspecting solutions, equipment installation, technical support, and maintenance services. Its main business segments are customized semiconductor equipment, engineering services, and probe cards and other materials.

Industry Outlook

New iterations of semiconductors, especially for AI / HPC applications, are set to increase in both front-end wafer fabrication advancements and back-end packaging complexities with each iterations. With the industry now moves to utilize "shift left", chip probing and its relevant supply chain will be key beneficiaries of this trend which we believe will unlock multi-year, secular growth trends.

Company Description

Hermes Testing Solutions (HTSI) was founded in 2004 in Hsinchu, Taiwan. It focuses on providing semiconductor testing and inspecting solutions, equipment installation, technical support, and maintenance services. Its main business segments are customized semiconductor equipment, engineering services, and probe cards and other materials.

Valuation Method and Risk Statement

We value Hermes Testing based on PE methodology.
Risks for the semis industry:
- Geopolitical uncertainties: Geopolitical uncertainties including tariffs and more export control could negatively impact semis cycle, and a downturn would lead to slower demand in the overall market and moderating capacity expansion.
- Meaningful deceleration of new technology development: Slower demand and less investment are expected If there is meaningful deceleration of new technology development such as Cloud AI, autonomous driving, etc.
- Rising utility cost: Larger-than-expected utility cost increases would further pressure profitability. Rising utility costs in Taiwan have negatively impacted margins for Taiwan tech companies.
Company risks:
- Faster- or slower-than-expected front-end/CoWoS capacity expansion: This could result in Hermes Testing gaining/losing equipment orders from major foundries and OSATs.
- Competitors achieving technological advancement: Potential risk of competition (from either local or foreign companies) achieving technological advancements could result in Hermes Testing losing market share from major foundries and OSATs.
- Better- or worse-than-expected AI growth: Better- or worse-than-expected AI growth could lead to a ramp-up or a slowdown of equipment orders from major foundries and OSATs to Hermes Testing, affecting long-term revenue growth potential.
- Slowdown or delay of new technological advancement: A potential slowdown or delay of the rollout for technological advancements for technologies such as SoIC, CoPoS, and CPO, would limit future equipment orders.
- Increase of raw material costs: Rising raw material costs may directly impact Hermes Testing's margins for equipment shipments.

Quantitative Research Review

UBS Global Research publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. The views for this month can be found below. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For previous responses please make reference to (i) previous UBS Global Research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on ubs-quant-answers@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research Team on the email above.

Hermes Testing Solutions

Question	Response
1. Is the industry structure facing the firm likely to improve or deteriorate over the next six months? Rate on a scale of 1-5 (1 = getting worse, 3 = no change, 5 = getting better, N/A = no view)	4
2. Is the regulatory/government environment facing the firm likely to improve or deteriorate over the next six months? Rate on a scale of 1-5 (1 = getting tougher 3 = no change, 5 = getting better, N/A = no view)	3
3. Over the last 3-6 months in broad terms have things been improving/no change/getting worse for this stock? Rate on a scale of 1-5 (1 = getting a lot worse, 3 = not much change, 5 = getting a lot better, N/A = no view)	4
4. Relative to the current CONSENSUS EPS forecast, is the next company EPS update likely to lead to: (1 = negative surprise vs consensus, 3 = in-line with consensus, 5 = positive surprise vs consensus expectations, N/A = no view)	3
5. What's driving the difference?	
6. Relative to YOUR current earnings forecast, is there relatively greater risk at the next earnings result of:(1 = downside skew risk to earnings, 3 = equal upside or downside risk to earnings, 5 = upside skew risk to earnings, N/A = no view)	3
7. What's driving the difference?	
8. Is there an upcoming catalyst for the company over the next three months?	No Catalyst
9. Is there an actual or approximate date for the catalyst?	
10. Is the catalyst date an actual or approximate date?	
11. What is the catalyst?	

Required Disclosures

This document has been prepared by UBS Securities Pte. Ltd., Taipei Branch, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates, including former Credit Suisse AG and its subsidiaries, branches and affiliates are referred to herein as "UBS".

For information on the ways in which UBS manages conflicts and maintains independence of its UBS Global Research product; historical performance information; certain additional disclosures concerning UBS Global Research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. Unless otherwise indicated, information and data in this report are based on company disclosures including but not limited to annual, interim, quarterly reports and other company announcements. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 07 October 2026 06:54 AM GMT. UBS has designated certain UBS Global Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS Global Research publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS Global Research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on ubs-quant-answers@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

Analyst Certification:
Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

UBS Global Research: Global Equity Rating Definitions

12-Month Rating	Definition	Coverage[1]	IB Services[2]
Buy	FSR is > 6% above the MRA.	55%	24%
Neutral	FSR is between -6% and 6% of the MRA.	39%	20%
Sell	FSR is > 6% below the MRA.	6%	21%

Source: UBS. Rating allocations are as of 30 September 2026.
1:Percentage of companies under coverage globally within the 12-month rating category.
2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS:Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES:UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Consultation (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

Research analysts contributing to this report who are employed by any non-US affiliate of UBS Securities LLC are not registered/ qualified as research analysts with FINRA. Such analysts may not be associated persons of UBS Securities LLC and therefore are not subject to the FINRA restrictions on communications with a subject company, public appearances, and trading securities held by a research analyst account. The name of each affiliate and analyst employed by that affiliate contributing to this report, if any, follows.

UBS Securities Pte. Ltd., Taipei Branch: Ryan Sun, Sunny Lin.

UBS Global Research is provided to our clients through UBS Neo, and in certain instances, UBS.com and any other system or distribution method specifically identified in one or more communications distributed through UBS Neo or UBS.com (each a system) as an approved means for distributing UBS Global Research. It may also be made available through third party vendors and distributed by UBS and/or third parties via e-mail or alternative electronic means.

All UBS Global Research is available on UBS Neo. Please contact your UBS sales representative if you wish to discuss your access to UBS Neo. Where UBS Global Research refers to "UBS Evidence Lab Inside" or has made use of data provided by UBS Evidence Lab and you would like to access that data please contact your UBS sales representative. UBS Evidence Lab data is available on UBS Neo. The level and types of services provided by UBS Global Research and UBS Evidence Lab to a client may vary depending upon various factors such as a client's individual preferences as to the frequency and manner of receiving communications, a client's risk profile and investment focus and perspective (e.g., market wide, sector specific, long-term, short-term, etc.), the size and scope of the overall client relationship with UBS Global Research and UBS Evidence Lab and legal and regulatory constraints. UBS HOLT and UBS Pharma Values are offerings of UBS Global Research. HOLT Lens is a corporate performance platform offering that provides an objective accounting-led framework for comparing and valuing companies and is available to clients of UBS Global Research; for further details and pricing please contact your UBS Sales representative. In particular, HOLT has a variety of warranted prices based on the scenario chosen; please mail UBS Securities LLC, 11 Madison Avenue, New York, NY 10010, USA, Attention: Investment Research, if you are interested in the warranted price on a particular company, again subject to commercial considerations. UBS Pharma Values is an analytical tool that involves the creation of a number of individual product net present value calculations, based on published forecasts of sales for pharmaceuticals, and is available to clients of UBS Global Research; for further details and pricing please contact your UBS Sales representative. For all other specific disclaimers, please see https://www.ubs.com/disclosures.

When you receive UBS Global Research through a system, your access and/or use of such UBS Global Research is subject to this UBS Global Research Disclaimer and to the UBS Neo Platform Use Agreement (the "Neo Terms") together with any other relevant terms of use governing the applicable System.

When you receive UBS Global Research via a third party vendor, e-mail or other electronic means, you agree that use shall be subject to this UBS Global Research Disclaimer, the Neo Terms and where applicable the UBS Investment Bank terms of business (https://www.ubs.com/global/en/investment-bank/regulatory.html) and to UBS's Terms of Use/Disclaimer (https://www.ubs.com/global/en/legalinfo2/disclaimer.html). In addition, you consent to UBS processing your personal data and using cookies in accordance with our Privacy Statement (https://www.ubs.com/global/en/legalinfo2/privacy.html) and cookie notice (https://www.ubs.com/global/en/legal/privacy/users.html).

If you receive UBS Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via UBS Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via UBS Global Research or otherwise, without the prior written consent of UBS. You agree not to use UBS Global Research in any artificial intelligence system, without the prior written consent of UBS.

In certain circumstances you may receive UBS Global Research otherwise than in the capacity of a client of UBS and you understand and agree that under these circumstances (i) the UBS Global Research is provided to you for information purposes only; (ii) for the purposes of receiving it you are not intended to be and will not be treated as a "client" of UBS for any legal or regulatory purpose; (iii) the UBS Global Research must not be relied on or acted upon for any purpose; and (iv) such content is subject to the relevant disclaimers that follow.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

UBS notes that no globally accepted framework or definition (legal, regulatory or otherwise) currently exists, nor is there a market consensus as to what constitutes an "ESG" (Environmental, Social or Governance) or an equivalent-label, or as to what precise attributes are required for the Information (as defined below) to be defined as ESG or equivalently-labelled. Any information, data or other content including from a third party source contained, referred to herein or used for whatsoever purpose by UBS or a third party ("Information"), in relation to any actual or potential ESG objective, issue or consideration is not intended to be relied upon for ESG classification, regulatory regime or industry initiative purposes ("ESG Regimes"). Nothing in these materials is intended to convey, suggest or indicate that UBS considers or represents any product, service, person or body mentioned in these materials as meeting or qualifying for any ESG classification, labelling or similar standards that may exist under the ESG Regimes. UBS has not conducted any assessment of compliance with ESG Regimes. Parties are reminded to make their own assessments for these purposes.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a

complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. For further information on the ways in which UBS Global Research manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS Global Research recommendations, please visit https://www.ubs.com/disclosures.

UBS Global Research will initiate, update and cease coverage solely at the discretion of UBS Global Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

UBS Global Research may utilise artificial intelligence tools ("AI Tools") in the preparation of this document. Notwithstanding any such use of AI Tools, this document has undergone human review.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by UBS Global Research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Please note that all transactions conducted by UBS are consistent with sanctions regulations imposed by Switzerland, the European Union, the United Nations, the United Kingdom and the United States, per UBS' global sanctions policy. UBS opinion as to future investment worthiness assumes no new sanctions are imposed.

US persons are prohibited from purchasing or selling securities of certain companies designated as being associated with the Chinese Military in accordance with the amended US Presidential Executive Order 13959.

United Kingdom: This material is distributed by UBS AG, London Branch to persons who are eligible counterparties or professional clients. UBS AG, London Branch is authorised by the Prudential Regulation Authority and subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. **Europe:** Except as otherwise specified herein, these materials are distributed by UBS Europe SE, a subsidiary of UBS AG, to persons who are eligible counterparties or professional clients (as detailed in the Bundesanstalt fur Finanzdienstleistungsaufsicht (BaFin) Rules and according to MIFID) and are only available to such persons. The information does not apply to, and should not be relied upon by, retail clients. UBS Europe SE is authorised by the European Central Bank (ECB) and regulated by the BaFin and the ECB. **Germany, Luxembourg, the Netherlands, Belgium and Ireland:** Where an analyst of UBS Europe SE has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE. In all cases it is distributed by UBS Europe SE and UBS AG, London Branch. **Turkey:** Distributed by UBS AG, London Branch. No information in this document is provided for the purpose of offering, marketing and sale by any means of any capital market instruments and services in the Republic of Turkey. Therefore, this document may not be considered as an offer made or to be made to residents of the Republic of Turkey. UBS AG, London Branch is not licensed by the Turkish Capital Market Board under the provisions of the Capital Market Law (Law No. 6362). Accordingly, neither this document nor any other offering material related to the instruments/services may be utilized in connection with providing any capital market services to persons within the Republic of Turkey without the prior approval of the Capital Market Board. However, according to article 15 (d) (ii) of the Decree No. 32, there is no restriction on the purchase or sale of the securities abroad by residents of the Republic of Turkey. **Poland:** Distributed by UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce. Where an analyst of UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce. **Russia:** Prepared and distributed by UBS Bank (OOO). Should not be construed as an individual Investment Recommendation for the purpose of the Russian Law - Federal Law #39-FZ ON THE SECURITIES MARKET Articles 6.1-6.2.**Switzerland:** Distributed by UBS AG to persons who are institutional investors only. UBS AG is regulated by the Swiss Financial Market Supervisory Authority (FINMA). **Italy:** Prepared by UBS Europe SE and distributed by UBS Europe SE and UBS Europe SE, Italy Branch. Where an analyst of UBS Europe SE, Italy Branch has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE, Italy Branch. **France:** Prepared by UBS Europe SE and distributed by UBS Europe SE and UBS Europe SE, France Branch. Where an analyst of UBS Europe SE, France Branch has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE, France Branch. **Spain:** Prepared by UBS Europe SE and distributed by UBS Europe SE and UBS Europe SE, Spain Branch. Where an analyst of UBS Europe SE, Spain Branch has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE, Spain Branch. **Sweden:** Prepared by UBS Europe SE and distributed by UBS Europe SE and UBS Europe SE, Sweden Branch. Where an analyst of UBS Europe SE, Sweden Branch has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE, Sweden Branch. **South Africa:** Distributed by UBS South Africa (Pty) Limited (Registration No. 1995/011140/07), an authorised user of the JSE and an authorised Financial Services Provider (FSP 7328). **Saudi Arabia:** This document has been issued by UBS AG (and/or any of its subsidiaries, branches or affiliates), a public company limited by shares, incorporated in Switzerland with its registered offices at Aeschenvorstadt 1, CH-4051 Basel and Bahnhofstrasse 45, CH-8001 Zurich. This publication has been approved by UBS Saudi Arabia (a subsidiary of UBS AG), a Saudi closed joint stock company incorporated in the Kingdom of Saudi Arabia under commercial register number 1010257812 having its registered office at Tatweer Towers, P.O. Box 75724, Riyadh 11588, Kingdom of Saudi Arabia. UBS Saudi Arabia is authorized and regulated by the Capital Market Authority to conduct securities business under license number 08113-37. **UAE / Dubai:** The information distributed by UBS AG Dubai Branch is only intended for Professional Clients and/or Market Counterparties, as classified under the DFSA rulebook. No other person should act upon this material/communication. The information is not for further distribution within the United Arab Emirates. UBS AG Dubai Branch is regulated by the DFSA in the DIFC. UBS is not licensed to provide banking services in the UAE by the Central Bank of the UAE, nor is it licensed by the UAE Securities and Commodities Authority. **Israel:** This Material is distributed by UBS AG, London Branch. UBS Securities Israel Ltd is a licensed Investment Marketer that is supervised by the Israel Securities Authority (ISA). UBS AG, London Branch and its affiliates incorporated outside Israel are not licensed under the Israeli Advisory Law. UBS may engage among others in issuance of Financial Assets or in distribution of Financial Assets of other issuers for fees or other benefits. UBS AG, London Branch and its affiliates may prefer various Financial Assets to which they have or may have an Affiliation (as such term is defined under the Israeli Advisory Law). Nothing in this Material should be considered as investment advice under the Israeli Advisory Law. This Material is being issued only to and/or is directed only at persons who are Eligible Clients within the meaning of the Israeli Advisory Law, and this Material must not be furnished to, relied on or acted upon by any other persons. **United States:** Distributed to US persons by either UBS Securities LLC or by UBS Financial Services Inc., subsidiaries of UBS AG; or by a group, subsidiary or affiliate of UBS AG that is not registered as a US broker-dealer (a **'non-US affiliate'**) to major US institutional investors only. UBS Securities LLC or UBS Financial Services Inc. accepts responsibility for the content of a report prepared by another non-US affiliate when distributed to US persons by UBS Securities LLC or UBS Financial Services Inc. All transactions by a US person in the securities mentioned in this report must be effected through UBS Securities LLC or UBS Financial Services Inc., and not through a non-US affiliate. UBS Securities LLC is not acting as a municipal advisor to any municipal entity or obligated person within the meaning of Section 15B of the Securities Exchange Act (the "Municipal Advisor Rule"), and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of the Municipal Advisor Rule. **Canada:** Distributed by UBS Securities Canada Inc., a registered investment dealer in Canada

and a Member-Canadian Investor Protection Fund, or by another affiliate of UBS AG that is registered to conduct business in Canada or is otherwise exempt from registration. **Brazil:** Except as otherwise specified herein, this Material is prepared by UBS BB Corretora de Câmbio, Títulos e Valores Mobiliários S.A. (UBS BB CCTVM) to persons who are eligible investors residing in Brazil, which are considered to be Professional Investors (Investidores Profissionais), as designated by the applicable regulation, mainly the CVM Resolution No. 30 from the 11th of May 2021 (determines the duty to verify the suitability of products, services and transactions with regards to the client´s profile). UBS BB CCTVM is a subsidiary of UBS BB Servicos de Assessoria Financeira e Participacoes S.A. ("UBS BB"). UBS BB is an association between UBS AG and Banco do Brasil (through its subsidiary BB – Banco de Investimentos S.A.), of which UBS AG is the majority owner and which provides investment banking services and coverage in Brazil, Argentina, Chile, Paraguay, Peru and Uruguay. UBS BB CCTVM is regulated by the Comissao de Valores Mobiliarios (CVM) and by the Central Bank of Brazil. Ombudsman: 0800-940-0266/ https://www.ubs.com/br/pt/ubsbb-investment-bank/ombudsman.html. UBS may hold relevant financial and commercial interest in relation to the company subject to this Research report. **Hong Kong:** Distributed by UBS Securities Asia Limited. Please contact local licensed persons of UBS Securities Asia Limited in respect of any matters arising from, or in connection with, the analysis or document **Singapore:** Distributed by UBS Securities Pte. Ltd. [Co. Reg. No.: 198500648C] or UBS AG, Singapore Branch. Please contact UBS Securities Pte. Ltd., an exempt financial adviser under the Singapore Financial Advisers Act (Cap. 110); or UBS AG, Singapore Branch, an exempt financial adviser under the Singapore Financial Advisers Act (Cap. 110) and a wholesale bank licensed under the Singapore Banking Act (Cap. 19) regulated by the Monetary Authority of Singapore, in respect of any matters arising from, or in connection with, the analysis or document. Global Wealth Management Disclaimer

You receive this document in your capacity as a client of UBS Global Wealth Management. This publication has been distributed to you by UBS Switzerland AG (regulated by FINMA in Switzerland) or its affiliates (**"UBS"**) with whom you have a banking relationship with. The full name of the distributing affiliate and its competent authority can be found in the country-specific disclaimer at the end of this document. UBS may utilise artificial intelligence tools ("AI Tools") in the preparation of this document. Notwithstanding any such use of AI Tools, this document has undergone human review.

The date and time of the first dissemination of this publication is the same as the date and time of its publication.

Risk information:

You agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research, and that you shall not extract data from any research or estimates, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is **for your information only**; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may

adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes: (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and UBS Global Research) and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/research-methodology.

Research will initiate, update and cease coverage solely at the discretion of research management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or sustainable investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio incorporating ESG factors or sustainable investing considerations may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Disclosures: If you require detailed information on disclosures of interest or conflict of interest as required by Market Abuse Regulation please contact the mailbox MAR_disclosure_twopager@ubs.com. Please note that e-mail communication is unsecured.

External Asset Managers / External Financial Consultants: In case this research or publication is provided to an External Asset Manager or an External Financial Consultant, UBS expressly prohibits that it is redistributed by the External Asset Manager or the External Financial Consultant and is made available to their clients and/or third parties.

Argentina: All securities that will be offered to you by UBS are not authorized by the Argentine Securities and Exchange Commission (CNV) and are not subject to its reporting, periodic information requirements, or oversight. Furthermore, the CNV has not reviewed or endorsed the information provided in any securities offering document, nor the accuracy of any accounting, financial, economic data, or any other information disclosed therein, which remains the sole responsibility of the respective issuer and the other parties involved. **Australia:** This document is provided by UBS Switzerland AG. UBS Switzerland AG does not hold an Australian Financial Services Licence (AFSL) and relies on an exemption to provide financial services to persons in Australia. This document is intended only for distribution to wholesale clients under the Corporations Act 2001 (Cth). UBS Switzerland AG is a related body corporate of UBS AG, Australia Branch and UBS Securities Australia Limited. This document may be distributed to clients by those entities, but it is provided by UBS Switzerland AG and is not provided under any of the other entities' AFSL. The information in this document is general in nature and is not intended to address the objectives, financial situation or needs of any particular individual or entity. Each recipient should consider their own objectives, financial situation or needs before acting on the advice and obtain the relevant Product Disclosure Statement (if required) before making any decision whether to acquire any product. In Australia, UBS entities, other than UBS AG, Australia Branch, are not authorized deposit-taking institutions for the purposes of the Banking Act 1959 (Cth.) and their obligations do not represent deposits or other liabilities of UBS AG, Australia Branch. UBS AG, Australia Branch does not guarantee or otherwise provide assurance in respect of the obligations of such UBS entities or the funds. An investor is exposed to investment risk including possible delays in repayment and loss of income and principal invested, as relevant. If you do not wish to receive marketing materials from UBS, please contact your UBS representative or the contact details listed in the Australia Privacy Notice: https://www.ubs.com/global/en/legal/privacy.html. Your personal data will be processed in accordance with this notice. **Bahrain**: This report is being distributed by UBS AG, Bahrain Branch, duly licensed and regulated by the Central Bank of Bahrain (CBB) as an Investment Business Firm - Category 2 (Branch). Related financial services or products are only made available to Accredited Investors, as defined by the CBB, and are not intended for any other persons. UBS AG, Bahrain Branch is

a Foreign Branch of UBS AG, Zurich/Switzerland and is located on Level 21, East Tower, Bahrain World Trade Centre, Manama, Kingdom of Bahrain. **Brazil**: This report is distributed in Brazil by UBS BB Corretora de Câmbio, Títulos e Valores Mobiliários S.A. or its affiliates ("UBS"). Pursuant to CVM Resolution No. 20/2021, of February 25, 2021, the author(s) of the report hereby certify(ies) that the views expressed in this report solely and exclusively reflect their personal opinions and have been prepared independently, including with respect to UBS. Part of the author(s)'s compensation is based on various factors, including the total revenues of the relevant UBS Group entity of which they are in employment of, but no part of the compensation has been, is, or will be related to the specific recommendations or views expressed in this report. In addition, UBS declares that: UBS has provided, and/or may in the future provide investment banking, brokerage, asset management, commercial banking and other financial services to the subject company/companies or its affiliates, for which they have received or may receive customary fees and commissions, and which constituted or may constitute relevant financial or commercial interests in relation to the subject company/companies or the subject securities. **Canada**: The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. Under no circumstances is the information contained herein to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada or, alternatively, pursuant to a dealer registration exemption. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed upon these materials, the information contained herein or the merits of the securities described herein and any representation to the contrary is an offence. In Canada, this publication is distributed by UBS Investment Management Canada Inc. **China**: This report and any offering material such as term sheet, research report, other product or service documentation or any other information (the "Material") sent with this report was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the material erroneously, UBS asks that you kindly delete it and inform UBS immediately. This report is prepared by UBS Switzerland AG or its offshore subsidiary or affiliate (collectively as "UBS Offshore"). UBS Offshore is an entity incorporated out of China and is not licensed, supervised or regulated in China to carry out banking or securities business. The recipient should not contact the analysts or UBS Offshore which produced this report for advice as they are not licensed to provide securities investment advice in China. UBS Investment Bank (including Research) has its own wholly independent research and views which at times may vary from the views of UBS Global Wealth Management. The recipient should not use this document or otherwise rely on any of the information contained in this report in making investment decisions and UBS takes no responsibility in this regard. **Denmark**: This publication is not intended to constitute a public offer under Danish law. It is distributed only for information purposes to clients of UBS Europe SE, Denmark Branch, filial af UBS Europe SE, with place of business at Sankt Annae Plads 13, 1250 Copenhagen, Denmark, registered with the Danish Commerce and Companies Agency, under No. 38 17 24 33. The Research Annual Compliance report for UBS Securities India Private Limited is available on www.ubs.com/ubssi under Research tab. **Indonesia**: This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed without the consent of UBS. None of the Material has been registered or filed under the prevailing laws and with any financial or regulatory authority in your jurisdiction. The Material may not have been approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including futures contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Israel**: UBS is a premier global financial firm offering wealth management, asset management and investment banking services from its headquarters in Switzerland and its operations in over 50 countries worldwide to individual, corporate and institutional investors. This publication is intended for information only and is not intended as an offer to buy or solicitation of an offer. Furthermore, this publication is not intended as an investment advice. Nothing contrary to the above, no action has been, or will be, taken in Israel that would permit an offering of the product(s) mentioned in this document or a distribution of this document to the public in Israel. In particular, this document has not been reviewed or approved by the Israeli Securities Authority. The product(s) mentioned in this document is/are being offered to a limited number of sophisticated investors who qualify as one of the investors listed in the first supplement to the Israeli Securities Law, 5728-1968. This document may not be reproduced or used for any other purpose, nor be furnished to any other person other than those to whom copies have been sent. Anyone who purchases the product(s) mentioned herein shall do so for its own benefit and for its own account and not with the aim or intention of distributing or offering the product(s) to other parties. Anyone who purchases the product(s) shall do so in accordance with its own understanding and discretion and after it has received any relevant financial, legal, business, tax or other advice or opinion required by it in connection with such purchase(s). The word "advice" and/or any of its equivalent terms shall be read and construed in conjunction with the definition of the term "investment marketing" as defined under the Israeli Regulation of Investment Advice, Investment Marketing and Portfolio Management Law. The Swiss laws and regulations require a number of mandatory disclosures to be made in independent financial research reports or recommendations. Pursuant to the Swiss Financial Market Infrastructure Act and the Financial Market Infrastructure Ordinance-FINMA, banks must disclose the percentage of voting rights they hold in companies being researched, if these holdings are equal to or exceed the statutory thresholds. In addition, the Directives on the Independence of Financial Research, issued by the Swiss Bankers Association, mandate a number of disclosures, including the disclosure of potential conflicts of interest, the participation within previous 12 months in any securities issues on behalf of the company being researched, as well as the fact that remuneration paid to the financial analysts is based generally upon the performance of (i) the new issues department or investment banking; or (ii) securities trading performance (including proprietary trading) or sales. **Italy**: This publication is not intended to constitute a public offer under Italian law. It is distributed only for information purposes to clients of UBS Europe SE, Succursale Italia, with place of business at Via del Vecchio Politecnico, 3-20121 Milano. UBS Europe SE, Succursale Italia is subject to the joint supervision of the European Central Bank, the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, "BaFin"), as well as of the Bank of Italy (Banca d'Italia) and the Italian Financial Markets Supervisory Authority (CONSOB - Commissione Nazionale per le Società e la Borsa), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by BaFin. **Japan**: This report is solely distributed in Japan by UBS SuMi TRUST Wealth Management Co., Ltd, Financial Instruments Dealer, Director-General of Kanto Local Finance Bureau (Kinsho) No. 3233, a member of the Japan Securities Dealers Association, Financial Futures Association of Japan, Investment Management Association of Japan. UBS SuMi TRUST Wealth Management Co., Ltd will not distribute or

forward this report outside Japan. **Jersey**: UBS AG, Jersey Branch, is regulated and authorized by the Jersey Financial Services Commission for the conduct of banking, funds and investment business. Where services are provided from outside Jersey, they will not be covered by the Jersey regulatory regime. UBS AG, Jersey Branch is a branch of UBS AG a public company limited by shares, incorporated in Switzerland whose registered offices are at Aeschenvorstadt 1, CH-4051 Basel and Bahnhofstrasse 45, CH 8001 Zurich. It is distributed only for information purposes to clients of UBS Europe SE, Luxembourg Branch ("UBS Luxembourg"), R.C.S. Luxembourg n° B209123, with registered office at 33A, Avenue J. F. Kennedy, L-1855 Luxembourg. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea (HRB n° 107046), with registered office at Bockenheimer Landstrasse 2-4, D-60306 Frankfurt am Main, Germany, duly authorized by the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, "BaFin") and subject to the joint prudential supervision of BaFin, the European Central Bank and the central bank of Germany (Deutsche Bundesbank). UBS Luxembourg is furthermore supervised by the Luxembourg prudential supervisory authority (Commission de Surveillance du Secteur Financier), in its role as host member state authority. This publication has not been submitted for approval to any public supervisory authority. **Malaysia**: This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Mexico**: This information is distributed by UBS Asesores México, S.A. de C.V. ("UBS Asesores"), an affiliate of UBS Switzerland AG, incorporated as a non-independent investment advisor under the Mexican regulation due to the relation with a Foreign Bank. UBS Asesores is registered under number 30060-001-(14115)-21/06/2016 and subject to the supervision of the Mexican Banking and Securities Commission ("CNBV") exclusively regarding the rendering of (i) portfolio management services, (ii) securities investment advisory services, analysis and issuance of individual investment recommendations, and (iii) anti-money laundering and terrorism financing matters. This UBS publication or any material related thereto is addressed only to Sophisticated or Institutional Investors located in Mexico. Research reports only reflect the views of the analysts responsible for the report. The compensation of the analyst(s) who prepared this report is determined exclusively by research management and senior management of any entity of UBS Group to which such analyst(s) render(s) services. **Monaco**: This document is not intended to constitute a public offering or a comparable solicitation under the Principality of Monaco laws, but might be made available for information purposes to clients of UBS (Monaco) S.A., a regulated bank having its registered office at 2 avenue de Grande Bretagne 98000 Monaco operating under a banking license granted by the "Autorité de Contrôle Prudentiel et de Résolution" (ACPR) and the Monegasque government which authorizes the provision of banking services in Monaco. UBS (Monaco) S.A. is also licensed by the "Commission de Contrôle des Activités Financières" (CCAF) to provide investment services in Monaco. The latter has not approved this publication. **Philippines:** This communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Portugal**: UBS Switzerland AG is not licensed to conduct banking and financial activities in Portugal nor is UBS Switzerland AG supervised by the portuguese regulators (Bank of Portugal "Banco de Portugal" and Portuguese Securities Exchange Commission "Comissão do Mercado de Valores Mobiliários"). **Qatar**: UBS Qatar LLC is licensed by the Qatar Financial Centre Authority and authorized by the QFC Regulatory Authority, with QFC no. 01169, and has its registered office at Building No. 36, 4th Floor, Abdulla Bin Thani Street, Doha Design District 1, Msheireb Downtown Doha, State of Qatar. This material is strictly intended for Eligible Counterparties and/or Business Customers only as classified under the QFCRA's Customer and Investor Protection Rules 2019. No other person should act upon this material. **Russia**: This document or information contained therein is for information purposes only and constitutes neither a public nor a private offering, is not an invitation to make offers, to sell, exchange or otherwise transfer any financial instruments in the Russian Federation to or for the benefit of any Russian person or entity and does not constitute an advertisement or offering of securities in the Russian Federation within the meaning of Russian securities laws. The information contained herein is not an "individual investment recommendation" as defined in Federal Law of 22 April 1996 No 39-FZ "On Securities Market" (as amended) and the financial instruments and operations specified herein may not be suitable for your investment profile or your investment goals or expectations. The determination of whether or not such financial instruments and operations are in your interests or are suitable for your investment goals, investment horizon or the acceptable risk level is your responsibility. We assume no liability for any losses connected with making any such operations or investing into any such financial instruments and we do not recommend to use such information as the only source of information for making an investment decision. **Saudi Arabia**: This material is for marketing and information purposes by UBS Saudi Arabia only. It has been distributed by UBS Saudi Arabia or reviewed and approved by UBS Saudi Arabia if it was issued by UBS Switzerland AG, by UBS AG, or any of its subsidiaries or branches. UBS Switzerland AG is a public company limited by shares, incorporated in Switzerland with its registered offices at Bahnhofstrasse 45, CH-8001 Zurich. UBS Saudi Arabia (a subsidiary of UBS AG) is a Saudi closed joint stock company incorporated in the Kingdom of Saudi Arabia with a paid capital of 110,000,000 Saudi Riyals under commercial register number 1010257812 having its registered office at Laysen Valley, P.O. Box 75724, Riyadh 11588, Kingdom of Saudi Arabia. UBS Saudi Arabia is authorized and regulated by the Capital Market Authority to conduct securities business under license number 08113-37. This document is distributed only under such circumstances as may be permitted by applicable laws and regulations. The information and – if any - opinions contained in this document have been compiled or arrived at based upon information obtained from sources believed to be reliable and in good faith, but is not guaranteed as being accurate, nor is it a complete statement or summary of the securities, markets or developments referred to in the document. All such information and opinions are subject to changes without notice. Past performance of investments (whether simulated or actual) is not necessarily an indicator of future results. Forward looking data is based on estimates that are subject to changes. Should the currency of a financial product or service not match your reference currency, performance may rise or fall due to currency fluctuations. UBS Switzerland AG and / or other members of the UBS Group may have a position in and may make a purchase and/or sale of any of the securities or other financial instruments mentioned in this document While statements that constitute "forward-looking statements", including, but not limited to, statements relating to our future business development represent UBS judgments and future expectations concerning the development of our business, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from our expectations. This document may not be forwarded, reproduced, redistributed or republished for any purpose without the written permission of UBS Saudi Arabia. Source for all data and charts (if not indicated otherwise) is UBS Switzerland AG. **Singapore**: Where applicable, this material is distributed in Singapore by UBS AG, Singapore Branch, which is licensed by the Monetary Authority of Singapore under the Banking Act 1970 to carry on banking business. UBS AG is incorporated in Switzerland with limited liability. UBS AG has a branch registered in Singapore (UEN S98FC5560C). This material has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations (the "FAR")) only. By virtue of your status as an institutional investor, accredited investor, or expert investor, UBS AG is exempted from complying with certain requirements under the Financial Advisers Act 2001 (the "FAA"), the FAR and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which UBS AG may provide to you. These include exemptions from complying with: Section 34 of the FAA (pursuant to Regulation 33(1) of the FAR); Section 36 of the FAA (pursuant to Regulation 34(1) of the FAR); and Section 45 of the FAA (pursuant to Regulation 35(1) of the FAR). Singapore recipients and clients of UBS AG, Singapore Branch should contact UBS AG, Singapore Branch for any matters arising from, or in connection with, this material. Where applicable, this communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved or endorsed by any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Spain:** This report is distributed in Spain by UBS AG, Sucursal en España, authorized under number 1460 in the Register by the Banco de España. **Sweden**: This publication is not intended to constitute a public offer under Swedish law. with the Swedish Companies Registration Office under Reg. No 516406-1011. UBS Europe SE, Sweden Bankfilial is subject to the joint supervision of the European Central Bank, the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, "BaFin"), as well as of the Swedish supervisory authority (Finansinspektionen), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by BaFin. **Taiwan**: This material is provided by UBS AG, Taipei Branch in accordance with laws of Taiwan, in agreement with or at the request of clients/prospects. **Thailand**: This communication and any offering material, term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication were done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Türkiye**: The information in this document is not provided for the purpose of offering, marketing or sale of any capital market instrument or service in the Republic of Türkiye. Therefore, this document may not be considered as an offer made, or to be made, to residents of the Republic of Türkiye in the Republic of Türkiye. UBS Switzerland AG is not licensed by the Capital Markets Board of Türkiye (the CMB) under the provisions of the Capital Market Law (Law No. 6362). Accordingly, neither this document nor any other offering material related to the instrument/service may be utilized in connection with providing any capital market services to persons within the Republic of Türkiye without the prior approval of the CMB. However, according to article 15 (d) (ii) of the Decree No. 32 residents of the Republic of Türkiye are allowed to purchase or sell the financial instruments traded in financial markets outside of the Republic of Türkiye. Further to this, pursuant to article 9 of the Communiqué on Principles Regarding Investment Services, Activities and Ancillary Services No. III-37.1, investment services provided abroad to residents of the Republic of Türkiye based on their own initiative are not restricted. **United Arab Emirates (UAE) / DIFC / Abu Dhabi**: UBS is not licensed in the UAE by the Central Bank of the UAE nor by the Emirates' Securities and Commodities Authority and does not undertake banking activities in the UAE. This document is provided for your information only and does not constitute financial advice. **DIFC**: UBS AG Dubai Branch is regulated by the DFSA in the DIFC. This material is strictly intended for Professional Clients and/or Market Counterparties only as classified under the DFSA rulebook. It should not be distributed to Retail Clients. The Investment Research is provided for information purposes only and is not a recommendation or offer to buy/sell/hold a particular investment. The investment research may be out of date. You should seek investment advice before acting on the basis of the Investment Research. **Abu Dhabi**: UBS AG Abu Dhabi Branch is licensed and regulated by the Financial Services Regulatory Authority ("FSRA") of the Abu Dhabi Global Market. This material is intended solely for professional clients or market counterparties, as defined in the rules of the FSRA. It is not directed at, nor intended for, retail clients or any person who does not meet the criteria of a professional client or market counterparty. **United Kingdom**: This document is issued by UBS Wealth Management, a division of UBS AG which is authorised and regulated by the Financial Market Supervisory Authority in Switzerland. In the United Kingdom, UBS AG is authorised by the Prudential Regulation Authority and is subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. Details about the extent of regulation by the Prudential Regulation Authority are available from us on request. A member of the London Stock Exchange. This publication is distributed to retail clients of UBS Wealth Management. **Ukraine**: UBS is a premier global financial services firm offering wealth management services to individual, corporate and institutional investors. UBS is established in Switzerland and operates under Swiss law and in over 50 countries and from all major financial centers. UBS is not registered and licensed as a bank/financial institution under Ukrainian legislation and does not provide banking and other financial services in Ukraine. UBS has not made, and will not make, any offer of the mentioned products to the public in Ukraine. No action has been taken to authorize an offer of the mentioned products to the public in Ukraine and the distribution of this document shall not constitute financial services for the purposes of the Law of Ukraine "On Financial Services and Financial Companies" dated 14 December 2021. Any offer of the mentioned products shall not constitute an investment advice, public offer, circulation, transfer, safekeeping, holding or custody of securities in the territory of Ukraine. Accordingly, nothing in this document or any other document, information or communication related to the mentioned products shall be interpreted as containing an offer, a public offer or invitation to offer or to a public offer, or solicitation of securities in the territory of Ukraine or investment advice under Ukrainian law. Electronic communication must not be considered as an offer to enter into an electronic agreement or other electronic instrument within the meaning of the Law of Ukraine "On Electronic Commerce" dated 3 September 2015. This document is strictly for private use by its holder and may not be passed on to third parties or otherwise publicly distributed. **USA**: Distributed to US persons only by UBS Financial Services Inc. or UBS Securities LLC, subsidiaries of UBS AG. UBS Switzerland AG, UBS Europe SE, UBS Bank, S.A., UBS BB Corretora de Câmbio, Títulos e Valores Mobiliários S.A., UBS Asesores México, S.A. de C.V., UBS SuMi TRUST Wealth Management Co., Ltd., UBS Wealth Management Israel Ltd. and UBS Menkul Degerler AS are affiliates of UBS AG. **UBS Financial Services Inc. accepts responsibility for the content of a report prepared by a non-US affiliate when it distributes reports to US persons. All transactions by a US person in the securities mentioned in this report should be effected through a US-registered broker dealer affiliated with UBS, and not through a non-US affiliate. The contents of this report have not been and will not be approved by any securities or investment authority in the United States or elsewhere. UBS Financial Services Inc. is not acting as a municipal advisor to any municipal entity or obligated person within the meaning of Section 15B of the Securities Exchange Act (the "Municipal Advisor Rule") and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of the Municipal Advisor Rule.** For information on the ways in which UBS Securities LLC manages conflicts and maintains independence of its UBS Global Research product; historical performance information; certain additional disclosures concerning UBS Global Research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures.

Jack-of-all-trades for bespoke testing solutions in the semiconductor industry

We initiate coverage of Hermes Testing (HTSI) with a Buy rating and NT$8,880 PT. HTSI is uniquely positioned to benefit from two key semiconductor testing trends: shift-left testing and the emerging CPO testing market. Leveraging its long-standing relationship with TSMC, HTSI has established capabilities across electrical test engineering, customised test equipment, thermal control modules, probe cards, and CPO testing solutions. We forecast revenue growth of 127%/152%/78% in 2026E/27E/28E, driven by increasing adoption of thermal control modules for wafer-level test and initial deployment of CPO insertion 2 and insertion 3 test equipment through ficonTEC. Additional 2028E growth drivers include reflow tools, laser clean solutions, and MEMS probe cards. The stock trades at 27/15x 2027/28E PE, versus ~35x NTM PE for handler-equipment peers, offering re-rating potential as sales scale, new products are qualified, and its CPO presence expands. See our companion testing deep dive sector note.

Shift-left beneficiary with exceptional thermal control modules

Thermal control modules should be HTSI's largest growth driver over the next several years. We expect increasing chip power consumption, rising package complexity, and tighter probe pitches to drive adoption of advanced thermal control solutions used alongside leading-edge probers, in additional to more wafer level insertions and longer test time. We estimate HTSI will ship approximately 3,000 thermal-control modules in 2027E, up from around 1,200 units in 2026E, sales contribution rise from ~30% in Q226 to >50% of sales by 2027E. The launch of its second-generation platform in 2027E, which carries 25-50% higher ASPs, should further improve profitability. We forecast GM expansion from 55.5% in 2026E to 58.3%/60.0% in 2027E/28E.

Unique position to capture CPO upside

Through its partnership with German optical-automation leader ficonTEC, HTSI is positioned to participate in the initial ramp of CPO testing equipment. HTSI supports local manufacturing, installation, automation and after-sales service, making it a key enabler of volume production. We estimate HTSI captures approximately 30% of equipment value across the 40 insertion 2 and 70 insertion 3 systems we forecast for delivery in 2027E, with further potential upside in 2028E as adoption expands.

Valuation: initiate coverage with a Buy rating and price target NT$8,880

We forecast EPS of NT$29.1 in 2026E (including a one-off employee share purchase programme impact), rising to NT$153.3/286.5 in 2027E/28E. Our NT$8,880 price target is based on 31x average 2028E PE, versus handler-equipment peers forward PE at roughly 35x, reflecting HTSI's unique exposure to both shift-left testing, CPO, and our estimate of 32% LT earnings CAGR. We initiate with a Buy rating.

UBS Research THESIS MAP a guide to our thinking and what´s where in this report

PIVOTAL QUESTIONS

Q: Will HTSI be able to keep its moat within chip probing thermal control modules?
Yes. We expect HTSI's competitive position to strengthen as chip power consumption, package complexity, and probe density continue to increase. The company is developing next-generation thermal control solutions, including liquid cooling technologies, while also expanding into specialized chuck solutions designed to address wafer warpage. In addition, HTSI's close collaboration with TSMC, TEL, Advantest, and other OSATs should reinforce its position within advanced wafer-level testing.

Q: Will insertion 2 of CPO testing process be skipped?
No. We believe concerns surrounding insertion 2 adoption are overdone. While some industry participants favor bypassing insertion 2 due to throughput and ROI considerations, doing so increases the risk of defective optical engines being identified only after the components are delivered to OSATs, creating yield accountability challenges and higher packaging losses. Based on our industry studies, we expect insertion 2 testing to remain an important part of the CPO workflow over at least the next two years as the industry focuses on improving PIC yields and overall testing efficiency.

UBSVIEW

We initiate coverage of Hermes Testing (HTSI) with a Buy rating and NT$8,880 price target. HTSI offers unique exposure to two of the semiconductor testing industry's most attractive growth drivers: 1) shift-left testing and 2) CPO testing. The industry's shift-left testing strategy will have more test insertions move to the wafer level before packaging, in addition to longer CP time. Leveraging its longstanding relationship with TSMC, HTSI has established capabilities across thermal control modules, electrical-test engineering services, customized equipment, and emerging CPO testing solutions. We believe there could be re-rating potential as sales scale, new products are qualified, and its CPO presence expands.

EVIDENCE

TSMC and OSATs have been expanding their CoWoS capacities aggressively, from 40kwpm in 2024 to around 90 kwpm in 2025, and is tracking to expand CoWoS capacity toward 160kwpm in 2026E. TSMC also ramped up expanding N3/N2 capacity, with multiple product launches from customers' pipelines—Nvidia's Rubin, AMD's MI400 series/Venice CPU and other cloud ASICs—translating into foreseeable, strong testing demand.

WHAT´S PRICED IN?

Despite a 264% YTD share-price increase, HTSI currently trades at just 15x of our 2028E EPS versus handler-equipment peers forward PE at roughly 35x. We believe market expectations for 2027 CPO testing equipment shipments remain conservative, particularly for insertion 2 equipment. Based on our industry analysis, we estimate HTSI will deliver 40 insertion 2 and 70 insertion 3 systems in 2027E, this should be higher than the market's expectation of no insertion 2 and limited insertion 3 shipment due to engineering bottleneck. We also see further upside in 2028E as CPO adoption expands. Our reverse DCF analysis indicates that the current market price implies only a 17% long-term sales CAGR vs our estimate of 27% and long-term GM level of 33% vs our estimate of 61%. We see scope for re-rating.

UPSIDE/DOWNSIDE SPECTRUM

COMPANY DESCRIPTION

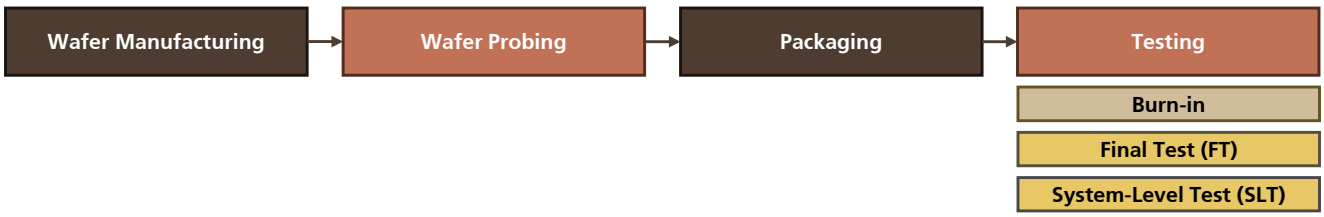
Hermes Testing Solutions (HTSI) was founded in 2004 in Hsinchu, Taiwan. It focuses on providing semiconductor testing and inspecting solutions, equipment installation, technical support, and maintenance services. Its main business segments are customized semiconductor equipment, engineering services, and probe cards and other materials.

Testing TAM expanding with IC complexity: leaders likely to outperform industry growth

Our central view is that testing content per AI accelerator is growing faster than semiconductor unit volumes, creating a multi-year expansion in testing TAM. We believe semiconductor testing is entering a period of structural growth as AI-driven chip complexity increases testing intensity across wafer, package and system levels. The industry's shift-left strategy, which moves more testing upstream in the semiconductor manufacturing process, is resulting in longer and more frequent test insertions. As cloud AI GPUs and ASICs become increasingly complex, additional testing is required to ensure functionality, performance and yield, while reducing defective parts per million (DPPM). More robust testing should improve deployment efficiency and lower the cost of operating AI infrastructure.

Semiconductor testing generally comprises four stages: wafer/chip probing (CP), final test (FT), system-level test (SLT), and burn-in. CP is conducted at the wafer-level before packaging, while FT, SLT, and burn-in occur after packaging. The below Figure 3 illustrates the semiconductor manufacturing flow.

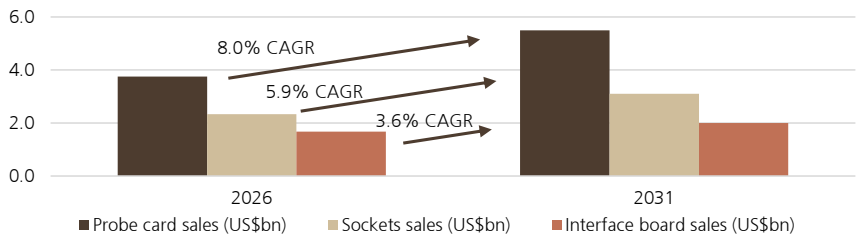
Figure 1: Semiconductor testing process: from wafer level to package level



Source: UBS

We estimate semiconductor testing historically accounts for ~1% of total semiconductor revenue. Within testing, consumables such as probe cards, sockets and interface boards represent ~10-15% of industry revenue. According to Yole, the probe card, socket and interface board markets should grow from US$3.8bn, US$2.3bn and US$1.7bn in 2026 to US$5.5bn, US$3.1bn and US$2.0bn by 2031, respectively.

Figure 2: Yole estimating testing consumables TAM to climb in the next 5 years



Source: Yole, UBS

Nonetheless, leaders within the testing sector will standout among competition, with greater sales CAGR comparing to the industry.

We see **HTSI**'s sales for the next few years to mainly be driven by 1) thermal control module shipment and 2) CPO equipment shipment. In the past, thermal control modules weren't necessary for chip probing, due to less TDP for the chips. However, as new iterations of AI accelerators now got substantial power draw, this unlocks a brand new TAM for HTSI to enter with their thermal control modules to pair with probers, in order to prevent probe card damages.

- **Robust thermal control module shipments.** We estimate HTSI to ship 3,000/4,100 thermal control modules in 2027E/28E, with continuous demand in future years, bringing their 2026-31E semiconductor equipment sales CAGR to 48%.

- **Thermal control module ASP expansion.** Gen 2 thermal control modules will start to ship in 2027E which will drive tool ASP up around 25-50%.
- **Demand supported by Advantest expansions.** We believe the 3,000 thermal control modules shipment forecast for 2027E is not far-fetched, as we read-across from Advantest's announced capacity expansion plan (testers will be paired with probers with a 1:1 ratio) with increasing capacity up to 5,000 testers within FY2027/3 and they also announced a 10,000-unit target within CY2028. Although the testers capacity expansion plan includes testers for final test, we do see a good portion to be allocated to chip probing given shift-left testing trend increasing both testing insertions and testing time before chip packaging.
- **CPO is another brand new TAM for semiconductor testing.** As insertion 2 and 3 testing equipment demand starts to rise in 2027 with scale-out CPO adoption, we see HTSI to ship 40/70 insertion 2 and 3 equipment in 2027E, with this number growing in 2028E to 80/160 and higher in future years as CPO proliferates, and driving 52% 2026-31E test equipment & engineering services sales CAGR.
- **CPO to see content increase.** Gen 2 insertion 3 equipment may start to ship in 2027E, with higher throughput and tool ASP.
- **Insertion 2 might scale down, but not happening anytime soon.** Insertion 2 equipment shipment might come down in 2029E and beyond, as foundries scale-up yield for photonic IC (PIC) in order to lessen the time consuming insertion 2 testing burden.

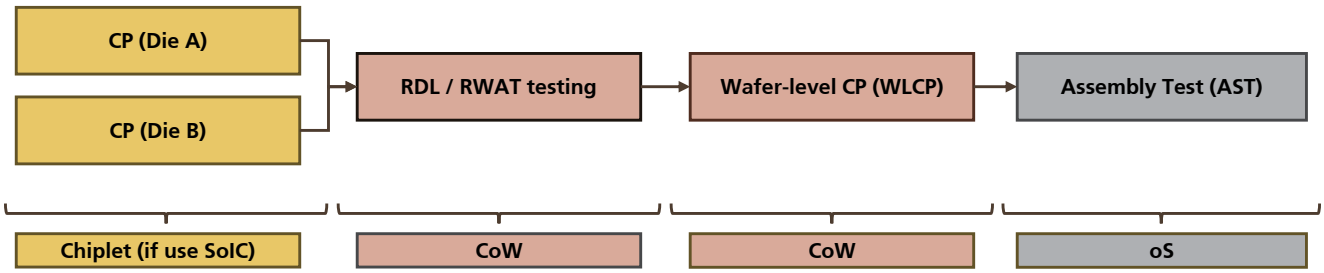
Robust growth drivers across semiconductor testing

We believe HTSI is set to benefit from several semiconductor testing growth drivers and capture the AI induced, expanding testing TAM. We see HTSI is uniquely positioned as the main beneficiary of two of the strongest growth drivers within semiconductor testing: testing shift-left and CPO.

Shift-left igniting secular growth for chip probing

The industry's adoption of shift-left testing should drive a multi-year structural growth opportunity for chip probing (CP) and its supply chain. As advanced packaging costs rise and AI accelerators become increasingly complex, semiconductor manufacturers are placing greater emphasis on identifying known-good dies (KGD) before packaging.

Figure 4: CP is set to grow substantially with shift-left, each packaging step set to be MORE costly than the prior step

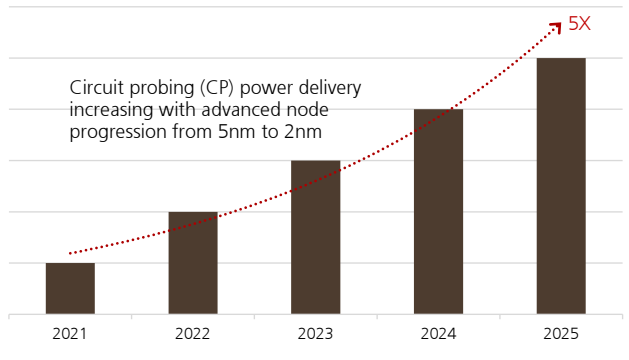


Source: UBS

The economics of advanced packaging reinforce this trend. Heterogeneous integration, chiplet architectures and 2.5D/3D packaging significantly increase package value, while defects identified late in the manufacturing process can lead to substantial scrap costs. To mitigate this risk, foundries and OSATs such as TSMC and ASE employ distributed testing flows incorporating KGD, known-good-stack (KGS) and assembly test screening, to catch defects before the components enter a multi-week packaging cycle (>2 weeks for CoW and 2 weeks for oS). The importance of these tests rises as AI clusters become increasingly dependent on component reliability and low defective-parts-per-million (DPPM) rates. Given the multiplicative yield degradation, a 300bps yield decline at just one manufacturing stage (e.g. dropping from 99.5% to 96.5%) reduces overall integrated four-stage yield from 98.0% to 95.0%; on a 500,000 unit ramp at US $10,000 per unit, this 3% scrap delta translates into around US$150m in unrecoverable losses given >6-month manufacturing lead times.

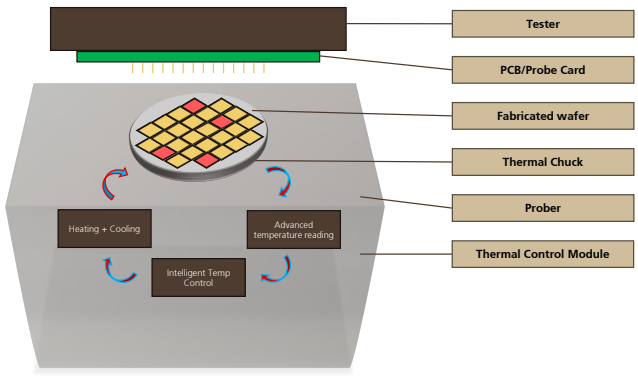
At the same time, rising chip power consumption is increasing the technical difficulty of wafer-level testing. As chip thermal design power scales beyond 1,000W and power density is expected by the industry to surge another 8x by 2030, traditional wafer-level chip probe (WLCP) encounters severe physical bottlenecks. Finer probe pitches and higher power densities increase the risk of overheating, probe needle burnout and yield degradation, creating demand for more advanced probing and thermal-control solutions.

Figure 5: CP power delivery trend rises with process tech evolution



Source: UBS

Figure 6: Thermal control module inside probers are essential to control wafer temperature



Source: UBS

Hermes Testing (HTSI) is a key beneficiary of this trend. Leveraging its long-standing relationship with TSMC and expertise in semiconductor test solutions, HTSI supplies advanced thermal control modules used alongside leading-edge probers (made by Tokyo Electron), particularly for AI applications. These thermal control modules are required for high TDP semiconductor wafer probe in order to maintain the temperature

of the chuck to avoid needle burns or probe card damages. We estimate HTSI will ship approximately 3,000 thermal-management modules in 2027E, up from 1,200 in 2026E, supporting sales growth of 127%/152% in 2026E/27E. HTSI is also the partner for prober installation, prober maintenance and services. In addition, HTSI provides high-end chuck processing services, an area that should benefit from increasing package sizes and higher wafer warpage associated with advanced packaging.

Beyond thermal control modules, HTSI also supplies consumables and customised solutions for wafer-level testing, including probe card cleaning sheets and laser-based probe head cleaning systems. As probing intensity increases under the shift-left testing model, demand for cleaning and maintenance solutions should rise alongside probe card utilisation. Currently, cleaning sheets is around 5% of sales, but we believe it could gain traction in 2027/28E and beyond. We see additional upside from future modular laser cleaning systems that could be integrated directly with probers, further expanding HTSI's content opportunity within advanced wafer-level testing.

CPO testing fuelling future growth for semiconductor testing

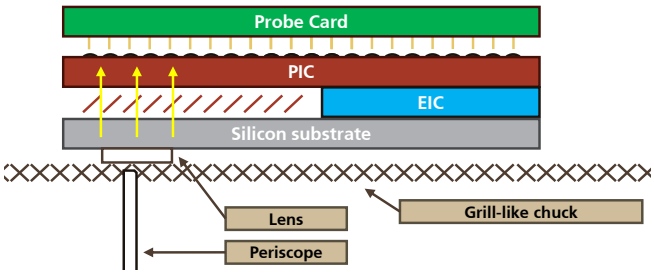
As interconnect bottlenecks increasingly shift from the memory wall to the copper wall, we believe co-packaged optics (CPO) adoption is inevitable over the longer term. Testing remains one of the key bottlenecks to CPO deployment, as optical validation differs fundamentally from the electrical testing processes that have dominated semiconductor manufacturing for decades. As a result, CPO is creating a new testing opportunity across the semiconductor equipment and consumables ecosystem. We have written extensively on CPO and opportunities that it brings to the semiconductor supply chain, see our CPO deep dive, our thoughts on CPO timing, 2026 SiPhIA conference takeaways, and SEMICON 2026 takeaways.

Various test equipment suppliers are scrambling to come up with ideal testing equipment across the four insertions of CPO testing, with solutions to ensure both optical and electrical signal integrity of the CPO solutions. The four insertions are:

- **Insertion 1: Electronic IC (EIC)/Photonic IC (PIC) test.** Single-side wafer test that has dedicated probe cards to test the fabricated EIC/PIC wafers.
- **Insertion 2: Optical/Electrical test.** Double sided wafer test, testing the hybrid bonded (e.g. via TSMC's COUPE) EIC and PIC wafers by an opto-electrical test that verifies the electrical signals on the top and optical signal on the bottom of the hybrid bonded wafers.
- **Insertion 3: Optical engine (OE) test.** The OE tests are done to ensure the quality of the OEs and with FAU (Fiber Array Unit) attached, to ensure the signal integrity of the OEs. The testing equipment needs to be able to handle 224G per channel data rates, requiring high unit per hour (UPH) throughput, meticulous dirt mitigation, and maintaining a near 100% contact rating on high-speed sockets.
- **Insertion 4: ASIC final test.** This final test step is established post the OEs are packaged together with the ASIC. The complete ASIC package (now with CPO) is now tested for opto-electrical functionalities.

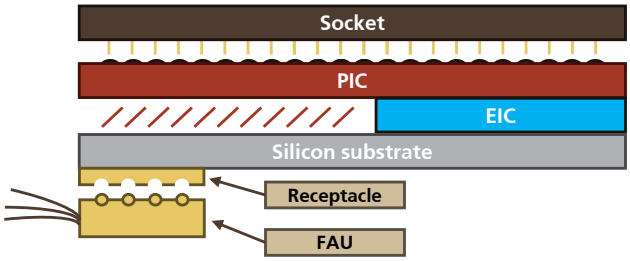
As it stands, insertion 2 and insertion 3 are the two areas where there are the most debates in the industry. Insertion 3 suppliers such as Chroma has noted the trend of "shift-to-middle" paradigm centered on insertion 3. In high-density scale-out switches deploying up to 32 optical engines (e.g. Nvidia's Spectrum-X architectures), any OE defect results in package scrap at the CoWoS level, making 100% known good die (KGD) validation at the singulated OE stage an absolute commercial requirement.

Figure 7: An illustration for insertion 2 test method



Source: UBS

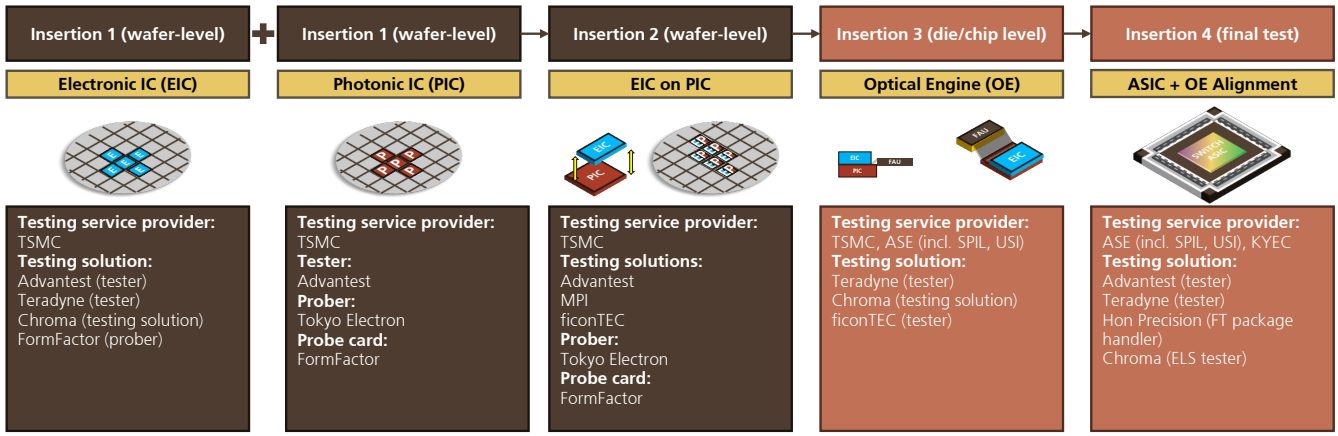
Figure 8: An illustration for insertion 3 test method



Source: UBS

As shown in the below figure, as there are no set standards for the testing equipment, throughput and stability are now the main target and area of competition for the major players in the field. Notable ones for each insertions are listed.

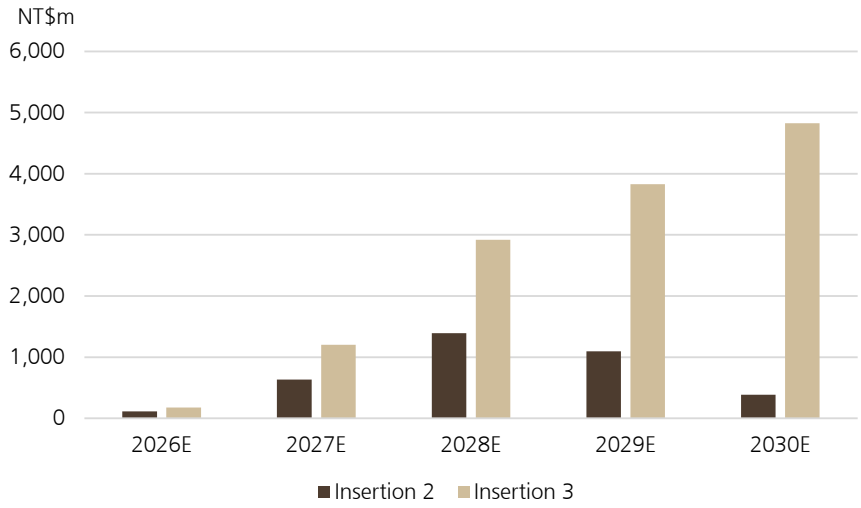
Figure 9: CPO testing flow chart with key suppliers



Source: UBS

With its 25 years of precision test equipment expertise, ficonTEC is an early mover for CPO test equipment and has key know-how for optical alignment, which is quintessential for optical test. **HTSI**, through its partnership with ficonTEC, is set to be a major beneficiary once CPO proliferates in 2027E-28E. As the partner of ficonTEC, Hermes Testing is the key enabler that can help ficonTEC achieve HVM for its CPO testing equipment. As of now, our view is that both insertion 2 and insertion 3 should be required within the next two years, despite the difficulties surrounding double-sided wafer probing (insertion 2), as the yield for OEs are still not high enough to avoid defective dies. Finding out known-good OEs will be crucial before the FAU coupling process during the latter stages of CPO packaging, to prevent impeding the final package with multiple OEs attached to the switch ASIC (e.g. 32 OEs on Nvidia's Spectrum-X). We estimate Hermes Testing will ship 40/70 units of insertion 2/3 testing equipment in 2027E, with potential upside to the numbers as we view Hermes Testing will likely assist with the ramp up for Gen 2 insertion 3 equipment in 2027E. Gen 2 insertion equipment will come with better throughput and ASP.

Figure 10: We believe HTSI CPO equipment sales will pick up in 2027/28E with 541%/135% YoY growth



Source: UBS estimates

Beyond insertions 2 and 3, HTSI is also positioned to participate in insertion 1 testing through customised prober solutions for photonic integrated circuit (PIC) testing. We believe these solutions could eventually be packaged as licensable intellectual property, creating an additional long-term growth opportunity as CPO adoption broadens. While near-term testing growth is driven by AI accelerators, CPO represents the next major expansion cycle for semiconductor testing. We believe HTSI is uniquely positioned to participate across multiple test insertions, providing exposure to a potentially significant source of incremental revenue beginning in 2027E.

Figure 11: A switch chip with 32 OEs and the CPO packaging supply chain

HTSI's unique position for new TAM of thermal control modules and CPO test equipment

Hermes Testing Solutions (HTSI) was founded in 2004 in Hsinchu, Taiwan, as a spin-off from Hermes-Epitek. The company provides semiconductor testing and inspection solutions, engineering services, customized equipment, and test consumables. HTSI maintains a global service footprint across Taiwan (Hsinchu, Tainan), Mainland China (Suzhou), Japan (Tokyo, Kumamoto), Singapore, Malaysia, and the United States (Arizona), enabling close support for leading semiconductor customers.

Its main business segments are structured around three pillars:

- **Semiconductor equipment and customized products:** HTSI utilises a dual-track strategy of independent R&D and also equipment agency sales. They offers

highly customized solutions designed to address specific client pain points and bottlenecks. Key products include: thermal control modules that pair with a 1:1 ratio with wafer-level test probers, electron beam inspection equipment, white light interference optical inspection systems, laser probe cleaning machines, and the SYMPHONY fluxless reflow system.

- **Testing equipment engineering services:** The company operates the largest engineering service team in Taiwan, consisting of over 340 technical professionals. The engineering service team provides extensive equipment life-cycle support, including installation, relocations, modification, testing, routine maintenance, and repair services. CPO related equipment sales/services will be recognized within this segment, as CPO are not direct HTSI products, but rather sales recognition via its partnership with ficonTEC.
- **Probe card design, manufacturing, and cleaning materials:** HTSI delivers a comprehensive product portfolio that supports the entire probe card life-cycle. For probe cards, they supply membrane, cantilever, and vertical probe cards. As they are small in scale, HTSI targets niche probe card applications such as RF, 5G/6G, millimeter wave, LCD driver, low end logics, TIA (Transimpedance Amplifier), etc. In addition to the three existing probe technologies, HTSI also collaborates with MJC in Japan for MEMS probe development, targeting sales in 2028E for high-end, AI/HPC related applications. Cleaning materials is another important business within this segment, as HTSI source and process sand paper or other materials to offer cleaning sheets to clean the probe cards, removing oxidations, unwanted particles and substances that accumulated on the probe cards during the testing process.

The sales resiliency in the coming years mainly stems from its robust relationship with key industry players, especially as an engineering and service provider with TSMC for testing solutions. This sets up a solid foundation for its customized equipment business, as they know the specific testing bottleneck to tackle. For instance, as Hermes-Epitek manufacturers the probers for Tokyo Electron (TEL) and HTSI helps with installation, services, and maintenance of the probers, they understand the thermal bottlenecks that the wafer-level test industry has been facing and can effectively come up with module solutions to solve this.

Margins set to expand with value-added products and services

The company has demonstrated strong execution in advanced wafer-level testing, with H126 revenue of NT$2.2bn already exceeding 90% of FY25 revenue (NT$2.4bn). Profitability has also improved significantly, with GM increasing from 42.1% in 2025 to 54.9% in H126.

With share of value-added products and services set to rise in 2027E in sales mix, HTSI is set to see GM and operating leverage expansion. As a niche engineering service provider that has robust ties to leading foundries and OSATs, we believe HTSI has substantial pricing power and estimate HTSI' GM for thermal control modules to be around 65%, with GM for CPO equipment of around 60% as HTSI provides an engineering-service-like business for it. We believe these factors will help the company to reach a 60% long-term GM range.

OPM is also set to expand with customized equipment sales rise in total sales mix. If we exclude the one-time expense to be recognized during Q326 for employee stock benefits (we estimate around NT$1bn), YoY opex growth will be around 99% for 2027E, with downside risk if the company conducts tight cost control measures. We forecast the company's OPM will expand from 19.5% in 2026E, to 44.3%/47.0% in 2027/28E.

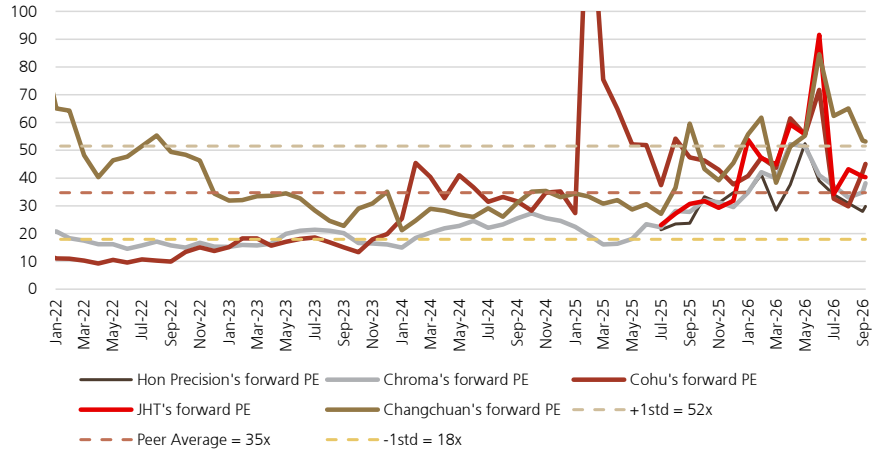
WHAT´S PRICED IN?

HTSI is trading at NT$4,190 as of 6 Oct 2026



Source: LSEG, UBS

Despite a 264% YTD share-price increase, HTSI still trades at just 15x 2028E P/E. We believe market expectations for 2027E CPO testing equipment shipments remain conservative, particularly for insertion 2 equipment. Based on our industry analysis, we estimate HTSI will deliver 40 insertion 2 and 70 insertion 3 systems in 2027E, this should be higher than the market's expectation of no insertion 2 and limited insertion 3 shipment due to engineering bottleneck. We also see further upside in 2028E as CPO adoption expands. Our reverse DCF analysis indicates that the current market price implies only a 17% long-term sales CAGR vs our estimate of 27% and long-term GM level of 33% vs our estimate of 61%. We see scope for re-rating.

We believe the market is not fully reflecting three key growth drivers:

1) Shift-left testing is still underappreciated.

As advanced packaging costs rise and AI accelerators become increasingly complex, more thorough testing is done at the wafer-level. This should drive sustained demand for HTSI's thermal control modules, probe card consumables, and other wafer-level testing solutions.

2) CPO revenue potential remains underestimated.

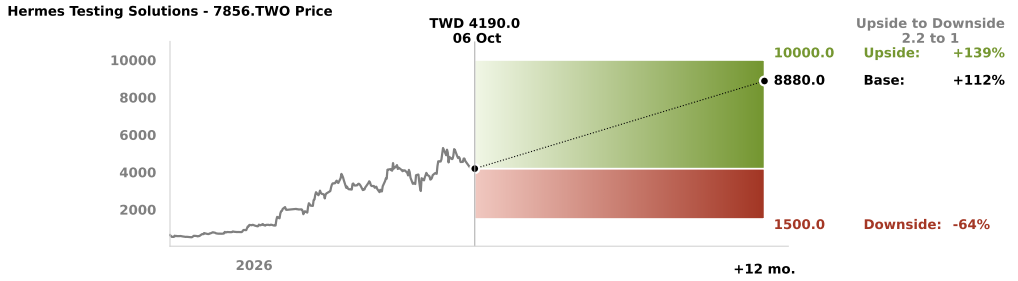
Investor expectations for 2027 CPO equipment shipments, particularly insertion 2 testing systems, remain conservative. Based on our industry studies, we forecast HTSI will deliver 40 insertion 2 and 70 insertion 3 systems in 2027E, with further potential upside in 2028E as CPO adoption broadens.

3) New products provide additional optionality.

Beyond its core businesses, HTSI is expanding into higher-value solutions including mass-reflow tools, MEMS probe cards and laser cleaning systems, creating incremental growth opportunities that we believe are largely absent from current expectations.

We value HTSI using 31x average 2028E PE, underpinned by a 32% 2027-31E earnings CAGR. We use 2028E PE as our view is that 2028 is the year for thermal control modules and CPO adoption grow from the initial ramping up stage to mass adoption stage. We believe using handlers as a peer group is justifiable for a unique company like HTSI, with thermal control modules for chip probing sharing similar characteristics as active thermal control used for final test, in addition to Hon Precision and Chroma having exposure to CPO test equipment. For equipment vendors, the peer group's average NTM PE post 2022 is around 35x, and the group is currently trading at around 41x NTM PE (see What's Priced In chart).

UPSIDE/DOWNSIDE SPECTRUM



HTSI is trading at NT $4,190 as of 6 Oct 2026

Value drivers (2027/28E)	Thermal control module shipments	CPO insertion 2 & 3 shipments	GM
NT$10,000 upside	3,300/5,000	60&100 / 100&175	61.2%/63.6%
NT$8,880 base	3,000/4,100	40&70 / 80&160	58.3%/60.0%
NT$1,500 downside	1,300/2,000	5&20 / 10&50	53.3%/54.0%

Source: UBS estimates

Risk to the current share price is heavily skewed (2.2:1) to the upside.

UPSIDE (NT$10,000): Our upside scenario reflects stronger than expected thermal module and CPO equipment shipment in 2027-28E, with additional upside from better traction of probe cards and mass reflow tools, forming 157%/91% YoY sales growth in 2027/28E and even higher operating leverage with OPM of 46.3%/50.0% in 2027/28E. This scenario implies a 34x 2028E PE, a upside driving by more equipment demand stemming for robust shift-left test induced equipment bottleneck, alongside CPO proliferation with scale-up CPO equipment pull-in in 2028E.

BASE (NT$8,880): Our price target of NT$8,880 is based on 31x 2028E PE. We expect an earnings CAGR of 32% in 2027-31E. With shift-left trend for more thermal module requirement during testing, alongside 40/70 CPO insertion 2/3 shipment. We see these growth drivers driving YoY sales growth from a high base of 127% in 2026E to 152%/78% YoY in 2027/2028E, with OPM of 44.3%/47.0% in 2027/28E.

DOWNSIDE (NT$1,500): Our downside scenario reflects lower shipment of thermal control modules due to less advanced prober demand with less insertion 2 and 3 equipment shipment due to bottlenecks with CPO production, alongside limited additional growth drivers to be picked up in 2028 such as MEMS probe card and mass reflow tools. This leads to weaker YoY sales growth of 67%/50% in 2027/28E and operating margin of 29.3%/32.0% in 2027/28E as equipment shipment fails to scale. This scenario implies a 14x 2028E PE, as valuation de-rate with dimmed outlook without CPO and limited upside from thermal control module shipments.

COMPANY DESCRIPTION

Hermes Testing Solutions (HTSI) was founded in 2004 in Hsinchu, Taiwan. It focuses on providing semiconductor testing and inspecting solutions, equipment installation, technical support, and maintenance services. Its main business segments are customized semiconductor equipment, engineering services, and probe cards and other materials.

Industry Outlook

New iterations of semiconductors, especially for AI / HPC applications, are set to increase in both front-end wafer fabrication advancements and back-end packaging complexities with each iterations. With the industry now moves to utilize "shift left", chip probing and its relevant supply chain will be key beneficiaries of this trend which we believe will unlock multi-year, secular growth trends.

Company Description

Hermes Testing Solutions (HTSI) was founded in 2004 in Hsinchu, Taiwan. It focuses on providing semiconductor testing and inspecting solutions, equipment installation, technical support, and maintenance services. Its main business segments are customized semiconductor equipment, engineering services, and probe cards and other materials.

Valuation Method and Risk Statement

We value Hermes Testing based on PE methodology.
Risks for the semis industry:
- Geopolitical uncertainties: Geopolitical uncertainties including tariffs and more export control could negatively impact semis cycle, and a downturn would lead to slower demand in the overall market and moderating capacity expansion.
- Meaningful deceleration of new technology development: Slower demand and less investment are expected If there is meaningful deceleration of new technology development such as Cloud AI, autonomous driving, etc.
- Rising utility cost: Larger-than-expected utility cost increases would further pressure profitability. Rising utility costs in Taiwan have negatively impacted margins for Taiwan tech companies.
Company risks:
- Faster- or slower-than-expected front-end/CoWoS capacity expansion: This could result in Hermes Testing gaining/losing equipment orders from major foundries and OSATs.
- Competitors achieving technological advancement: Potential risk of competition (from either local or foreign companies) achieving technological advancements could result in Hermes Testing losing market share from major foundries and OSATs.
- Better- or worse-than-expected AI growth: Better- or worse-than-expected AI growth could lead to a ramp-up or a slowdown of equipment orders from major foundries and OSATs to Hermes Testing, affecting long-term revenue growth potential.
- Slowdown or delay of new technological advancement: A potential slowdown or delay of the rollout for technological advancements for technologies such as SoIC, CoPoS, and CPO, would limit future equipment orders.
- Increase of raw material costs: Rising raw material costs may directly impact Hermes Testing's margins for equipment shipments.

Quantitative Research Review

UBS Global Research publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. The views for this month can be found below. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For previous responses please make reference to (i) previous UBS Global Research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on ubs-quant-answers@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research Team on the email above.

Hermes Testing Solutions

Question	Response
1. Is the industry structure facing the firm likely to improve or deteriorate over the next six months? Rate on a scale of 1-5 (1 = getting worse, 3 = no change, 5 = getting better, N/A = no view)	4
2. Is the regulatory/government environment facing the firm likely to improve or deteriorate over the next six months? Rate on a scale of 1-5 (1 = getting tougher 3 = no change, 5 = getting better, N/A = no view)	3
3. Over the last 3-6 months in broad terms have things been improving/no change/getting worse for this stock? Rate on a scale of 1-5 (1 = getting a lot worse, 3 = not much change, 5 = getting a lot better, N/A = no view)	4
4. Relative to the current CONSENSUS EPS forecast, is the next company EPS update likely to lead to: (1 = negative surprise vs consensus, 3 = in-line with consensus, 5 = positive surprise vs consensus expectations, N/A = no view)	3
5. What's driving the difference?	
6. Relative to YOUR current earnings forecast, is there relatively greater risk at the next earnings result of:(1 = downside skew risk to earnings, 3 = equal upside or downside risk to earnings, 5 = upside skew risk to earnings, N/A = no view)	3
7. What's driving the difference?	
8. Is there an upcoming catalyst for the company over the next three months?	No Catalyst
9. Is there an actual or approximate date for the catalyst?	
10. Is the catalyst date an actual or approximate date?	
11. What is the catalyst?	

Required Disclosures

This document has been prepared by UBS Securities Pte. Ltd., Taipei Branch, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates, including former Credit Suisse AG and its subsidiaries, branches and affiliates are referred to herein as "UBS".

For information on the ways in which UBS manages conflicts and maintains independence of its UBS Global Research product; historical performance information; certain additional disclosures concerning UBS Global Research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. Unless otherwise indicated, information and data in this report are based on company disclosures including but not limited to annual, interim, quarterly reports and other company announcements. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 07 October 2026 06:54 AM GMT. UBS has designated certain UBS Global Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS Global Research publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS Global Research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on ubs-quant-answers@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

Analyst Certification:
Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

UBS Global Research: Global Equity Rating Definitions

12-Month Rating	Definition	Coverage[1]	IB Services[2]
Buy	FSR is > 6% above the MRA.	55%	24%
Neutral	FSR is between -6% and 6% of the MRA.	39%	20%
Sell	FSR is > 6% below the MRA.	6%	21%

Source: UBS. Rating allocations are as of 30 September 2026.
1:Percentage of companies under coverage globally within the 12-month rating category.
2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS:Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES:UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Consultation (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

Research analysts contributing to this report who are employed by any non-US affiliate of UBS Securities LLC are not registered/ qualified as research analysts with FINRA. Such analysts may not be associated persons of UBS Securities LLC and therefore are not subject to the FINRA restrictions on communications with a subject company, public appearances, and trading securities held by a research analyst account. The name of each affiliate and analyst employed by that affiliate contributing to this report, if any, follows.

UBS Securities Pte. Ltd., Taipei Branch: Ryan Sun, Sunny Lin.

UBS Global Research is provided to our clients through UBS Neo, and in certain instances, UBS.com and any other system or distribution method specifically identified in one or more communications distributed through UBS Neo or UBS.com (each a system) as an approved means for distributing UBS Global Research. It may also be made available through third party vendors and distributed by UBS and/or third parties via e-mail or alternative electronic means.

All UBS Global Research is available on UBS Neo. Please contact your UBS sales representative if you wish to discuss your access to UBS Neo. Where UBS Global Research refers to "UBS Evidence Lab Inside" or has made use of data provided by UBS Evidence Lab and you would like to access that data please contact your UBS sales representative. UBS Evidence Lab data is available on UBS Neo. The level and types of services provided by UBS Global Research and UBS Evidence Lab to a client may vary depending upon various factors such as a client's individual preferences as to the frequency and manner of receiving communications, a client's risk profile and investment focus and perspective (e.g., market wide, sector specific, long-term, short-term, etc.), the size and scope of the overall client relationship with UBS Global Research and UBS Evidence Lab and legal and regulatory constraints. UBS HOLT and UBS Pharma Values are offerings of UBS Global Research. HOLT Lens is a corporate performance platform offering that provides an objective accounting-led framework for comparing and valuing companies and is available to clients of UBS Global Research; for further details and pricing please contact your UBS Sales representative. In particular, HOLT has a variety of warranted prices based on the scenario chosen; please mail UBS Securities LLC, 11 Madison Avenue, New York, NY 10010, USA, Attention: Investment Research, if you are interested in the warranted price on a particular company, again subject to commercial considerations. UBS Pharma Values is an analytical tool that involves the creation of a number of individual product net present value calculations, based on published forecasts of sales for pharmaceuticals, and is available to clients of UBS Global Research; for further details and pricing please contact your UBS Sales representative. For all other specific disclaimers, please see https://www.ubs.com/disclosures.

When you receive UBS Global Research through a system, your access and/or use of such UBS Global Research is subject to this UBS Global Research Disclaimer and to the UBS Neo Platform Use Agreement (the "Neo Terms") together with any other relevant terms of use governing the applicable System.

When you receive UBS Global Research via a third party vendor, e-mail or other electronic means, you agree that use shall be subject to this UBS Global Research Disclaimer, the Neo Terms and where applicable the UBS Investment Bank terms of business (https://www.ubs.com/global/en/investment-bank/regulatory.html) and to UBS's Terms of Use/Disclaimer (https://www.ubs.com/global/en/legalinfo2/disclaimer.html). In addition, you consent to UBS processing your personal data and using cookies in accordance with our Privacy Statement (https://www.ubs.com/global/en/legalinfo2/privacy.html) and cookie notice (https://www.ubs.com/global/en/legal/privacy/users.html).

If you receive UBS Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via UBS Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via UBS Global Research or otherwise, without the prior written consent of UBS. You agree not to use UBS Global Research in any artificial intelligence system, without the prior written consent of UBS.

In certain circumstances you may receive UBS Global Research otherwise than in the capacity of a client of UBS and you understand and agree that under these circumstances (i) the UBS Global Research is provided to you for information purposes only; (ii) for the purposes of receiving it you are not intended to be and will not be treated as a "client" of UBS for any legal or regulatory purpose; (iii) the UBS Global Research must not be relied on or acted upon for any purpose; and (iv) such content is subject to the relevant disclaimers that follow.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

UBS notes that no globally accepted framework or definition (legal, regulatory or otherwise) currently exists, nor is there a market consensus as to what constitutes an "ESG" (Environmental, Social or Governance) or an equivalent-label, or as to what precise attributes are required for the Information (as defined below) to be defined as ESG or equivalently-labelled. Any information, data or other content including from a third party source contained, referred to herein or used for whatsoever purpose by UBS or a third party ("Information"), in relation to any actual or potential ESG objective, issue or consideration is not intended to be relied upon for ESG classification, regulatory regime or industry initiative purposes ("ESG Regimes"). Nothing in these materials is intended to convey, suggest or indicate that UBS considers or represents any product, service, person or body mentioned in these materials as meeting or qualifying for any ESG classification, labelling or similar standards that may exist under the ESG Regimes. UBS has not conducted any assessment of compliance with ESG Regimes. Parties are reminded to make their own assessments for these purposes.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a

complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. For further information on the ways in which UBS Global Research manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS Global Research recommendations, please visit https://www.ubs.com/disclosures.

UBS Global Research will initiate, update and cease coverage solely at the discretion of UBS Global Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

UBS Global Research may utilise artificial intelligence tools ("AI Tools") in the preparation of this document. Notwithstanding any such use of AI Tools, this document has undergone human review.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by UBS Global Research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Please note that all transactions conducted by UBS are consistent with sanctions regulations imposed by Switzerland, the European Union, the United Nations, the United Kingdom and the United States, per UBS' global sanctions policy. UBS opinion as to future investment worthiness assumes no new sanctions are imposed.

US persons are prohibited from purchasing or selling securities of certain companies designated as being associated with the Chinese Military in accordance with the amended US Presidential Executive Order 13959.

United Kingdom: This material is distributed by UBS AG, London Branch to persons who are eligible counterparties or professional clients. UBS AG, London Branch is authorised by the Prudential Regulation Authority and subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. **Europe:** Except as otherwise specified herein, these materials are distributed by UBS Europe SE, a subsidiary of UBS AG, to persons who are eligible counterparties or professional clients (as detailed in the Bundesanstalt fur Finanzdienstleistungsaufsicht (BaFin) Rules and according to MIFID) and are only available to such persons. Global Wealth Management Disclaimer

You receive this document in your capacity as a client of UBS Global Wealth Management. This publication has been distributed to you by UBS Switzerland AG (regulated by FINMA in Switzerland) or its affiliates (**"UBS"**) with whom you have a banking relationship with. The full name of the distributing affiliate and its competent authority can be found in the country-specific disclaimer at the end of this document. UBS may utilise artificial intelligence tools ("AI Tools") in the preparation of this document. Notwithstanding any such use of AI Tools, this document has undergone human review.

The date and time of the first dissemination of this publication is the same as the date and time of its publication.

Risk information:

You agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research, and that you shall not extract data from any research or estimates, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is **for your information only**; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may

adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes: (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and UBS Global Research) and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/research-methodology.

Research will initiate, update and cease coverage solely at the discretion of research management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or sustainable investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio incorporating ESG factors or sustainable investing considerations may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Disclosures: If you require detailed information on disclosures of interest or conflict of interest as required by Market Abuse Regulation please contact the mailbox MAR_disclosure_twopager@ubs.com. Please note that e-mail communication is unsecured.

External Asset Managers / External Financial Consultants: In case this research or publication is provided to an External Asset Manager or an External Financial Consultant, UBS expressly prohibits that it is redistributed by the External Asset Manager or the External Financial Consultant and is made available to their clients and/or third parties.

Argentina: All securities that will be offered to you by UBS are not authorized by the Argentine Securities and Exchange Commission (CNV) and are not subject to its reporting, periodic information requirements, or oversight. Furthermore, the CNV has not reviewed or endorsed the information provided in any securities offering document, nor the accuracy of any accounting, financial, economic data, or any other information disclosed therein, which remains the sole responsibility of the respective issuer and the other parties involved. **Australia:** This document is provided by UBS Switzerland AG. UBS Switzerland AG does not hold an Australian Financial Services Licence (AFSL) and relies on an exemption to provide financial services to persons in Australia. This document is intended only for distribution to wholesale clients under the Corporations Act 2001 (Cth). UBS Switzerland AG is a related body corporate of UBS AG, Australia Branch and UBS Securities Australia Limited. This document may be distributed to clients by those entities, but it is provided by UBS Switzerland AG and is not provided under any of the other entities' AFSL. The information in this document is general in nature and is not intended to address the objectives, financial situation or needs of any particular individual or entity. Each recipient should consider their own objectives, financial situation or needs before acting on the advice and obtain the relevant Product Disclosure Statement (if required) before making any decision whether to acquire any product. In Australia, UBS entities, other than UBS AG, Australia Branch, are not authorized deposit-taking institutions for the purposes of the Banking Act 1959 (Cth.) and their obligations do not represent deposits or other liabilities of UBS AG, Australia Branch. UBS AG, Australia Branch does not guarantee or otherwise provide assurance in respect of the obligations of such UBS entities or the funds. An investor is exposed to investment risk including possible delays in repayment and loss of income and principal invested, as relevant. If you do not wish to receive marketing materials from UBS, please contact your UBS representative or the contact details listed in the Australia Privacy Notice: https://www.ubs.com/global/en/legal/privacy.html. Your personal data will be processed in accordance with this notice. **Bahrain**: This report is being distributed by UBS AG, Bahrain Branch, duly licensed and regulated by the Central Bank of Bahrain (CBB) as an Investment Business Firm - Category 2 (Branch). Related financial services or products are only made available to Accredited Investors, as defined by the CBB, and are not intended for any other persons. UBS AG, Bahrain Branch is

a Foreign Branch of UBS AG, Zurich/Switzerland and is located on Level 21, East Tower, Bahrain World Trade Centre, Manama, Kingdom of Bahrain. **Brazil**: This report is distributed in Brazil by UBS BB Corretora de Câmbio, Títulos e Valores Mobiliários S.A. or its affiliates ("UBS"). Pursuant to CVM Resolution No. 20/2021, of February 25, 2021, the author(s) of the report hereby certify(ies) that the views expressed in this report solely and exclusively reflect their personal opinions and have been prepared independently, including with respect to UBS. Part of the author(s)'s compensation is based on various factors, including the total revenues of the relevant UBS Group entity of which they are in employment of, but no part of the compensation has been, is, or will be related to the specific recommendations or views expressed in this report. In addition, UBS declares that: UBS has provided, and/or may in the future provide investment banking, brokerage, asset management, commercial banking and other financial services to the subject company/companies or its affiliates, for which they have received or may receive customary fees and commissions, and which constituted or may constitute relevant financial or commercial interests in relation to the subject company/companies or the subject securities. **Canada**: The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. Under no circumstances is the information contained herein to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada or, alternatively, pursuant to a dealer registration exemption. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed upon these materials, the information contained herein or the merits of the securities described herein and any representation to the contrary is an offence. In Canada, this publication is distributed by UBS Investment Management Canada Inc. **China**: This report and any offering material such as term sheet, research report, other product or service documentation or any other information (the "Material") sent with this report was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the material erroneously, UBS asks that you kindly delete it and inform UBS immediately. This report is prepared by UBS Switzerland AG or its offshore subsidiary or affiliate (collectively as "UBS Offshore"). UBS Offshore is an entity incorporated out of China and is not licensed, supervised or regulated in China to carry out banking or securities business. The recipient should not contact the analysts or UBS Offshore which produced this report for advice as they are not licensed to provide securities investment advice in China. UBS Investment Bank (including Research) has its own wholly independent research and views which at times may vary from the views of UBS Global Wealth Management. The recipient should not use this document or otherwise rely on any of the information contained in this report in making investment decisions and UBS takes no responsibility in this regard. **Denmark**: This publication is not intended to constitute a public offer under Danish law. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed without the consent of UBS. None of the Material has been registered or filed under the prevailing laws and with any financial or regulatory authority in your jurisdiction. The Material may not have been approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including futures contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Israel**: UBS is a premier global financial firm offering wealth management, asset management and investment banking services from its headquarters in Switzerland and its operations in over 50 countries worldwide to individual, corporate and institutional investors. This publication is intended for information only and is not intended as an offer to buy or solicitation of an offer. Furthermore, this publication is not intended as an investment advice. Nothing contrary to the above, no action has been, or will be, taken in Israel that would permit an offering of the product(s) mentioned in this document or a distribution of this document to the public in Israel. In particular, this document has not been reviewed or approved by the Israeli Securities Authority. The product(s) mentioned in this document is/are being offered to a limited number of sophisticated investors who qualify as one of the investors listed in the first supplement to the Israeli Securities Law, 5728-1968. This document may not be reproduced or used for any other purpose, nor be furnished to any other person other than those to whom copies have been sent. Anyone who purchases the product(s) mentioned herein shall do so for its own benefit and for its own account and not with the aim or intention of distributing or offering the product(s) to other parties. Anyone who purchases the product(s) shall do so in accordance with its own understanding and discretion and after it has received any relevant financial, legal, business, tax or other advice or opinion required by it in connection with such purchase(s). The word "advice" and/or any of its equivalent terms shall be read and construed in conjunction with the definition of the term "investment marketing" as defined under the Israeli Regulation of Investment Advice, Investment Marketing and Portfolio Management Law. The Swiss laws and regulations require a number of mandatory disclosures to be made in independent financial research reports or recommendations. Pursuant to the Swiss Financial Market Infrastructure Act and the Financial Market Infrastructure Ordinance-FINMA, banks must disclose the percentage of voting rights they hold in companies being researched, if these holdings are equal to or exceed the statutory thresholds. In addition, the Directives on the Independence of Financial Research, issued by the Swiss Bankers Association, mandate a number of disclosures, including the disclosure of potential conflicts of interest, the participation within previous 12 months in any securities issues on behalf of the company being researched, as well as the fact that remuneration paid to the financial analysts is based generally upon the performance of (i) the new issues department or investment banking; or (ii) securities trading performance (including proprietary trading) or sales. **Italy**: This publication is not intended to constitute a public offer under Italian law. It is distributed only for information purposes to clients of UBS Europe SE, Succursale Italia, with place of business at Via del Vecchio Politecnico, 3-20121 Milano. UBS Europe SE, Succursale Italia is subject to the joint supervision of the European Central Bank, the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, "BaFin"), as well as of the Bank of Italy (Banca d'Italia) and the Italian Financial Markets Supervisory Authority (CONSOB - Commissione Nazionale per le Società e la Borsa), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by BaFin. **Japan**: This report is solely distributed in Japan by UBS SuMi TRUST Wealth Management Co., Ltd, Financial Instruments Dealer, Director-General of Kanto Local Finance Bureau (Kinsho) No. 3233, a member of the Japan Securities Dealers Association, Financial Futures Association of Japan, Investment Management Association of Japan. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Mexico**: This information is distributed by UBS Asesores México, S.A. de C.V. ("UBS Asesores"), an affiliate of UBS Switzerland AG, incorporated as a non-independent investment advisor under the Mexican regulation due to the relation with a Foreign Bank. UBS Asesores is registered under number 30060-001-(14115)-21/06/2016 and subject to the supervision of the Mexican Banking and Securities Commission ("CNBV") exclusively regarding the rendering of (i) portfolio management services, (ii) securities investment advisory services, analysis and issuance of individual investment recommendations, and (iii) anti-money laundering and terrorism financing matters. This UBS publication or any material related thereto is addressed only to Sophisticated or Institutional Investors located in Mexico. Research reports only reflect the views of the analysts responsible for the report. The compensation of the analyst(s) who prepared this report is determined exclusively by research management and senior management of any entity of UBS Group to which such analyst(s) render(s) services. **Monaco**: This document is not intended to constitute a public offering or a comparable solicitation under the Principality of Monaco laws, but might be made available for information purposes to clients of UBS (Monaco) S.A., a regulated bank having its registered office at 2 avenue de Grande Bretagne 98000 Monaco operating under a banking license granted by the "Autorité de Contrôle Prudentiel et de Résolution" (ACPR) and the Monegasque government which authorizes the provision of banking services in Monaco. UBS (Monaco) S.A. is also licensed by the "Commission de Contrôle des Activités Financières" (CCAF) to provide investment services in Monaco. The latter has not approved this publication. **Philippines:** This communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Portugal**: UBS Switzerland AG is not licensed to conduct banking and financial activities in Portugal nor is UBS Switzerland AG supervised by the portuguese regulators (Bank of Portugal "Banco de Portugal" and Portuguese Securities Exchange Commission "Comissão do Mercado de Valores Mobiliários"). **Qatar**: UBS Qatar LLC is licensed by the Qatar Financial Centre Authority and authorized by the QFC Regulatory Authority, with QFC no. 01169, and has its registered office at Building No. 36, 4th Floor, Abdulla Bin Thani Street, Doha Design District 1, Msheireb Downtown Doha, State of Qatar. This material is strictly intended for Eligible Counterparties and/or Business Customers only as classified under the QFCRA's Customer and Investor Protection Rules 2019. No other person should act upon this material. **Russia**: This document or information contained therein is for information purposes only and constitutes neither a public nor a private offering, is not an invitation to make offers, to sell, exchange or otherwise transfer any financial instruments in the Russian Federation to or for the benefit of any Russian person or entity and does not constitute an advertisement or offering of securities in the Russian Federation within the meaning of Russian securities laws. The information contained herein is not an "individual investment recommendation" as defined in Federal Law of 22 April 1996 No 39-FZ "On Securities Market" (as amended) and the financial instruments and operations specified herein may not be suitable for your investment profile or your investment goals or expectations. The determination of whether or not such financial instruments and operations are in your interests or are suitable for your investment goals, investment horizon or the acceptable risk level is your responsibility. We assume no liability for any losses connected with making any such operations or investing into any such financial instruments and we do not recommend to use such information as the only source of information for making an investment decision. **Saudi Arabia**: This material is for marketing and information purposes by UBS Saudi Arabia only. It has been distributed by UBS Saudi Arabia or reviewed and approved by UBS Saudi Arabia if it was issued by UBS Switzerland AG, by UBS AG, or any of its subsidiaries or branches. UBS Switzerland AG is a public company limited by shares, incorporated in Switzerland with its registered offices at Bahnhofstrasse 45, CH-8001 Zurich. UBS Saudi Arabia (a subsidiary of UBS AG) is a Saudi closed joint stock company incorporated in the Kingdom of Saudi Arabia with a paid capital of 110,000,000 Saudi Riyals under commercial register number 1010257812 having its registered office at Laysen Valley, P.O. Box 75724, Riyadh 11588, Kingdom of Saudi Arabia. UBS Saudi Arabia is authorized and regulated by the Capital Market Authority to conduct securities business under license number 08113-37. This document is distributed only under such circumstances as may be permitted by applicable laws and regulations. The information and – if any - opinions contained in this document have been compiled or arrived at based upon information obtained from sources believed to be reliable and in good faith, but is not guaranteed as being accurate, nor is it a complete statement or summary of the securities, markets or developments referred to in the document. All such information and opinions are subject to changes without notice. Past performance of investments (whether simulated or actual) is not necessarily an indicator of future results. Forward looking data is based on estimates that are subject to changes. Should the currency of a financial product or service not match your reference currency, performance may rise or fall due to currency fluctuations. UBS Switzerland AG and / or other members of the UBS Group may have a position in and may make a purchase and/or sale of any of the securities or other financial instruments mentioned in this document While statements that constitute "forward-looking statements", including, but not limited to, statements relating to our future business development represent UBS judgments and future expectations concerning the development of our business, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from our expectations. This document may not be forwarded, reproduced, redistributed or republished for any purpose without the written permission of UBS Saudi Arabia. Source for all data and charts (if not indicated otherwise) is UBS Switzerland AG. **Singapore**: Where applicable, this material is distributed in Singapore by UBS AG, Singapore Branch, which is licensed by the Monetary Authority of Singapore under the Banking Act 1970 to carry on banking business. UBS AG is incorporated in Switzerland with limited liability. UBS AG has a branch registered in Singapore (UEN S98FC5560C). This material has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations (the "FAR")) only. By virtue of your status as an institutional investor, accredited investor, or expert investor, UBS AG is exempted from complying with certain requirements under the Financial Advisers Act 2001 (the "FAA"), the FAR and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which UBS AG may provide to you. These include exemptions from complying with: Section 34 of the FAA (pursuant to Regulation 33(1) of the FAR); Section 36 of the FAA (pursuant to Regulation 34(1) of the FAR); and Section 45 of the FAA (pursuant to Regulation 35(1) of the FAR). Singapore recipients and clients of UBS AG, Singapore Branch should contact UBS AG, Singapore Branch for any matters arising from, or in connection with, this material. Where applicable, this communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved or endorsed by any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Spain:** This report is distributed in Spain by UBS AG, Sucursal en España, authorized under number 1460 in the Register by the Banco de España. **Sweden**: This publication is not intended to constitute a public offer under Swedish law. Time to revisit semiconductor testing as content growth accelerates

Our core thesis is that AI-driven chip complexity is drastically increasing testing content across wafer, package, and system levels, creating a multi-year growth opportunity that the market has yet to fully price in. Testing companies in Taiwan have underperformed TAIEX in the past three months (indexing at -9% vs TAIEX +7%), yet to recover from the July market deleveraging. Investor hesitation currently stems from 1) fear of test content growth expectations already priced-in, 2) lingering concerns over shorter test times, and 3) near-term capacity constraints among major suppliers of probe cards, load boards, socket pins, testers, and handlers, caused by heightened testing demand. Ultimately, these concerns overshadow the structural increase in test insertions required by AI accelerators, chiplets, and advanced packaging. As advanced packaging scales, testing intensity must rise in tandem, driving growth through higher content per device rather than semiconductor unit growth alone.

Expanding testing opportunities with shift-left for CP and increasing FT content

Chip probing (CP) supply chain should be the key beneficiary of the industry's shift-left testing trend, as more test insertions move to the wafer level before packaging, in addition to longer CP time. We believe investors underestimate this trend, which should accelerate with broader adoption of 2.5D/3D packaging, chiplets and larger AI packages, driving demand for high pin count probe cards, probers, and thermal-control equipment. We expect strong growth for **Hermes Testing (HTSI)** as thermal-management requirements rise with increasing chip power and complexity, with prober thermal-control module shipments reaching 3,000/4,100 units in 2027E/28E, up from 1,200 in 2026E. We forecast **Chunghwa Precision Test (CHPT)**'s sales to exceed consensus by 7%/15% in 2027E/28E, supported by structural AI/HPC testing demand and rising value-added content. Importantly, shift-left testing does not diminish the role of final test (FT) and mission-mode testing. Test content and test time should continue to increase as validation becomes increasingly critical for complex, large-form-factor AI accelerators. We expect larger package sizes and rising system-level testing requirements to drive demand for **WinWay**'s high-pin-count sockets, supporting 74%/71% YoY sales growth in 2027E/28E.

Future of testing: co-packaged optics (CPO) will be a major opportunity

CPO testing represents a significant new market opportunity, though we expect the ecosystem to remain fragmented rather than consolidating around a single winner. As AI scaling shifts the industry bottleneck from memory to interconnect, CPO adoption is becoming increasingly important, creating new testing challenges that will require collaboration across equipment, optics, and test solution providers. Leveraging ficonTEC's optical alignment expertise and **HTSI**'s probe, testing, and manufacturing capabilities, we estimate the HTSI will deliver 40 units of insertion 2 equipment and 70 units of insertion 3 testing equipment in 2027, with further upside in 2028 as CPO deployment expands from scale-out towards scale-up.

Initiate Hermes Testing, Chunghwa Precision Test, WinWay with Buy ratings

We initiate coverage on semiconductor testing solution provider **Hermes Testing with a Buy rating, NT$8,880 price target** based on 31x 2028E PE, for thermal control/CPO with the most attractive risk/reward in our testing coverage; test interface PCB supplier **CHPT with a Buy rating, NT$5,000 price target** based on 31x avg 2027-28E PE, for CPU/TPU programs and test board content gain; and semiconductor test socket leader **WinWay with a Buy rating, NT$8,900 price target** based on 30x avg 2027-28E PE, for socket content growth and margin recovery. Among our testing coverage, we also like Hon Precision and Chroma ATE.

This report has been prepared by UBS Securities Pte. Ltd., Taipei Branch. **ANALYST CERTIFICATION AND REQUIRED DISCLOSURES, INCLUDING INFORMATION ON THE QUANTITATIVE RESEARCH REVIEW PUBLISHED BY UBS, BEGIN ON PAGE 22.**

UBS Research THESIS MAP	MOST FAVORED	LEAST FAVORED
	HTSI, CHPT, WinWay, Hon Precision, Chroma ATE	N/A

PIVOTAL QUESTIONS

Q: Is chip probing becoming increasingly important in the testing supply chain?

Yes. As package costs rise, foundries must improve known-good-die (KGD) screening before packaging, increasing demand for wafer-level testing. This should drive demand for probe cards, probers and advanced thermal control solutions capable of managing higher power consumption, wafer warpage and tighter test tolerances. We forecast HTSI/CHPT/WinWay' probe card business to see a 31%/35%/33% sales CAGR for 2026-2031E, as they are positioned to grow strongly given their smaller scale and robust growth drivers from shift left, CPU, AI accelerators. We forecast HTSI to ship 1,200/3,000/4,100 thermal control modules in 2026E/27E/28E, as advanced wafer-level test for AI accelerators will require thermal control solutions in order to prevent probe card needle burnt.

Q: Will FT and SLT content continue to grow in the coming years?

Yes. Despite concerns that final-test (FT) time could flatten or decline with Nvidia's Rubin GPUs, we expect overall FT content to continue growing as advanced packaging complexity and chip sizes increase. We also expect broader adoption of system-level testing (SLT)/mission-mode testing, as AI accelerators require increasingly stringent validation to ensure optimal system and rack-level performance. We forecast WinWay's socket business to see a 33% sales CAGR for 2026-2031E.

Q: Will CPO testing be a revenue generator in 2027-28 to supply chain players?

Yes. Testing remains a key bottleneck, creating a new equipment opportunity beginning in 2027E. We expect initial CPO volumes in 2027, followed by broader adoption in 2028. Testing remains one of the key bottlenecks to commercialization, driving demand for new equipment and test solutions. We believe early leaders such as ficonTEC (partnership with HTSI) are well positioned to benefit from the initial ramp, alongside suppliers including Chroma ATE and Hon Precision.

WHAT´S PRICED IN?

1) We believe upside from agentic AI CPU demand is not reflected in CHPT and WinWay shares. We estimate CPU-related demand could contribute 20-30% of 2027E sales for CHPT and WinWay, respectively, with further upside in 2028E. **2)** We believe market expectations for 2027 CPO testing equipment shipments remain conservative, particularly for insertion 2 equipment. Based on our industry analysis, we estimate HTSI will deliver 40 insertion 2 and 70 insertion 3 systems in 2027E, this should be higher than the market's expectation of no insertion 2 and limited insertion 3 shipment due to engineering bottleneck. We also see further upside in 2028E as CPO adoption expands.

UBSVIEW

Testing is becoming one of the largest incremental beneficiaries of AI-driven semiconductor complexity. As more test insertions are required across wafer, package and system levels, testing content per device should increase materially, expanding the industry's addressable market and supporting multi-year growth across the supply chain.

EVIDENCE

TSMC and OSATs have been expanding their CoWoS capacities aggressively, from 40kwpm in 2024 to around 90 kwpm in 2025, and tracking to expand CoWoS capacity toward 160kwpm in 2026E. TSMC also ramped up expanding N3/N2 capacity, with multiple product launches from customers' pipelines—Nvidia's Rubin, AMD's MI400 series/Venice CPU and other cloud ASICs—translating into foreseeable, strong testing demand.

Figure 1: Testing consumables TAM to continue to climb in the next 5 years

Executive Summary

Figure 2: Summary of our investment thesis for HTSI, CHPT, and WinWay

Company	Value Chain Positioning	Primary Product Focus	Investment Thesis	Price Target	Upside
Hermes Testing Solutions (HTSI)	Wafer-level Test	Semiconductor testing related installation and services, customized equipment (e.g. thermal control modules for probers), engineering services (CPO test equipment), probe cards.	A key semiconductor testing solution provider and a shift-left beneficiary, with thermal management capabilities that positions the company in the center of AI/HPC chip probing. Uniquely positioned with CPO exposure through its engineering expertise and partnership with ficonTEC.	**NT$8,880**	
Chunghwa Precision Test (CHPT)	Wafer-level Test, Final Test, System-level Test, Burn-in Test	Semiconductor test PCB, final test load board (interface board), probe cards, burn-in board.	A key semiconductor test PCB maker with unique vertical integration capabilities for fast product cadence to enable design-wins. Probe card business is benefiting from the shift-left trend, driving robust growth with design-wins from projects such as CPU and AI ASICs.	**NT$5,000**	
WinWay Technology	Wafer-level Test, Final Test, System-level Test, Burn-in Test	Final test sockets, system-level test sockets, probe cards.	Leading semiconductor test socket provider, beneficiary of final test and mission-level test content expansion with advanced packaging and chiplet proliferation. With its partnership with Technoprobe, WinWay's probe card strength is adding another leg of growth.	**NT$8,900**	

Source: UBS estimates

Shift-left igniting secular growth for chip probing

With the industry increasingly adopting shift-left testing, chip probing (CP) and its supply chain should be key beneficiaries of a multi-year structural growth trend. This underpins our above-consensus forecasts for **Chunghwa Precision Test (CHPT)**, with 2027E/28E sales 7%/15% above consensus driven by stronger AI/HPC demand, capacity expansion, and rising value-added content. **WinWay** should also benefit through its partnership with Technoprobe, with probe card revenue growth remaining robust at 94%/72% in 2026E/27E following 161%/260% growth in 2024/25.

Hermes Testing (HTSI) should be another major beneficiary as increasing chip power and complexity drive demand for advanced thermal-management modules used alongside high-end probing systems. With TEL's leading AI-oriented probers typically paired with advanced thermal-control solutions, we expect HTSI's thermal-module shipments to reach 3,000 units in 2027E from 1,200 in 2026E. Combined with testing, installation and service revenue, this should drive HTSI sales growth of 127%/152% in 2026E/27E.

Accelerators still in focus with TPU as another significant growth driver

Nvidia remains a key growth driver for both CHPT and WinWay. We expect both companies to gain share with Rubin, with WinWay's socket share improving from roughly 50% historically to 60% with Rubin, while CHPT is positioned to supply around 70% of probe card and final test PCB content. Nvidia currently accounts for roughly 50% of WinWay's revenue and 30% of CHPT's.

Beyond Nvidia, we view Google's TPU roadmap as a meaningful incremental opportunity. Following the successful ramp of TPU v8t with MediaTek as design partner, **CHPT** is positioned to supply probe card PCBs, final test load boards, system-level test boards and burn-in boards. **WinWay** will supply sockets for both TPU v8t and v9, with the larger v9 package providing another growth leg. We estimate production of 4mn TPU v8t units in 2027E and 2.3mn TPU v9 packages (9.2mn dies) alongside 2m v8t units in 2028E.

CPU business as a supplemental catalyst for test interface in an agentic world

With agentic AI proliferation, CPU demand is increasing significantly and this directly correlates to increasing demand for testing consumables. WinWay and CHPT should both benefit from the strong ramp up of Nvidia's ARM based Vera CPU and Google's ARM based Axion CPU in 2026E and 2027E. WinWay will be supplying sockets and probe cards for Vera and Axion, and CHPT will be the probe card and PCB supplier for both Vera and Axion. WinWay will have the additional upside from AMD's x86 Venice CPU, and CHPT could capture some share through AMD's equipment vendor procurement. We estimate **CHPT**'s CPU related sales to be low to mid-teens % of total sales in 2026E and growing to 20-30% in 2027E with CHPT's share expansions with turnkey probe card solutions for Google's Axion. For **WinWay**, we believe CPU should account for around 30% of sales in 2026E/27E.

CPO testing fuelling future growth for semiconductor testing

ficonTEC's 25 years of precision optical-test expertise makes it an early leader in CPO test equipment, particularly in optical alignment, a critical capability for high-volume manufacturing. Through its partnership with ficonTEC, **HTSI** is well positioned to benefit from the initial CPO ramp in 2027E-28E by supporting manufacturing scale-up.

We expect both insertion 2 and insertion 3 testing to be required over the next two years. Despite the technical challenges of double-sided wafer probing, insertion 2 testing remains important given current optical-engine yields and the need to identify known-good optical engines before fibre-array-unit (FAU) coupling. This becomes increasingly critical as switch designs integrate larger numbers of optical engines.

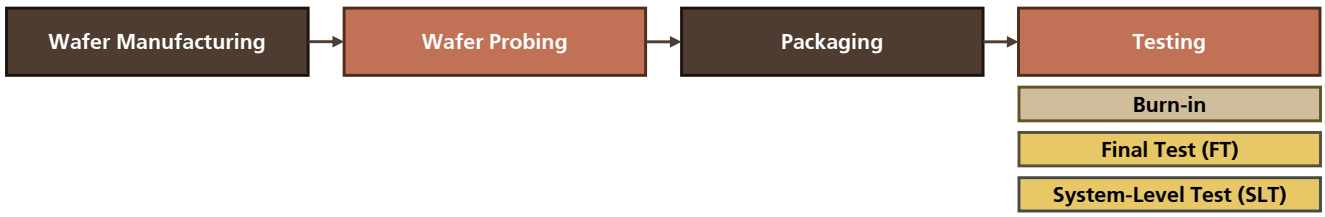
We estimate HTSI will ship 40 insertion 2 and 70 insertion 3 systems in 2027E, with further upside in 2028E as CPO adoption expands and next-generation platforms move into volume production.

Testing TAM expanding with IC complexity: leaders likely to outperform industry growth

Our central view is that testing content per AI accelerator is growing faster than semiconductor unit volumes, creating a multi-year expansion in testing TAM. We believe semiconductor testing is entering a period of structural growth as AI-driven chip complexity increases testing intensity across wafer, package and system levels. The industry's shift-left strategy, which moves more testing upstream in the semiconductor manufacturing process, is resulting in longer and more frequent test insertions. As cloud AI GPUs and ASICs become increasingly complex, additional testing is required to ensure functionality, performance and yield, while reducing defective parts per million (DPPM). More robust testing should improve deployment efficiency and lower the cost of operating AI infrastructure.

Semiconductor testing generally comprises four stages: wafer/chip probing (CP), final test (FT), system-level test (SLT), and burn-in. CP is conducted at the wafer-level before packaging, while FT, SLT, and burn-in occur after packaging. The below Figure 3 illustrates the semiconductor manufacturing flow.

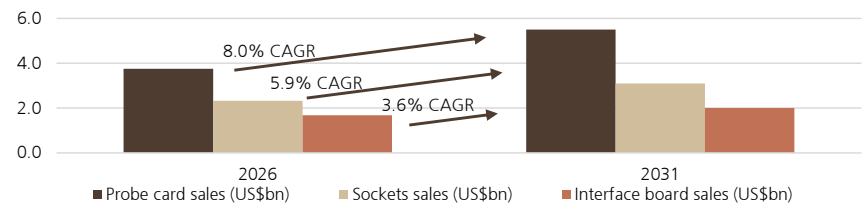
Figure 3: Semiconductor testing process: from wafer level to package level



Source: UBS

We estimate semiconductor testing historically accounts for ~1% of total semiconductor revenue. Within testing, consumables such as probe cards, sockets and interface boards represent ~10-15% of industry revenue. According to Yole, the probe card, socket and interface board markets should grow from US$3.8bn, US$2.3bn and US$1.7bn in 2026 to US$5.5bn, US$3.1bn and US$2.0bn by 2031, respectively.

Figure 4: Yole estimating testing consumables TAM to climb in the next 5 years



Source: Yole, UBS

Nonetheless, leaders within the testing sector are likely to stand out among competition with greater sales CAGR comparing to the industry. Below we highlight **Hermes Testing (HTSI)**, **Chunghwa Precision Test (CHPT)**, and **WinWay**'s impressive growth drivers and how this compares with broader industry sales CAGR.

We see **HTSI**'s sales for the next few years to mainly be driven by 1) thermal control module shipment and 2) CPO equipment shipment. In the past, thermal control modules weren't necessary for chip probing, due to less TDP for the chips. However, as new iterations of AI accelerators now have substantial power draw, this unlocks a brand new TAM for HTSI to enter with their thermal control modules to pair with probers, in order to prevent probe card damage.

- **Robust thermal control module shipments.** We estimate HTSI to ship 3,000/4,100 thermal control modules in 2027E/28E, with continuous demand in future years, bringing their 2026-31E semiconductor equipment sales CAGR to 48%.
- **Thermal control module ASP expansion.** Gen 2 thermal control modules should start to ship in 2027E which will drive tool ASP up around 25-50%.
- **Demand supported by Advantest expansions.** We believe the 3,000 thermal control modules shipment forecast for 2027E is not far-fetched, as we read-across from Advantest's announced capacity expansion plan (testers will be paired with probers with a 1:1 ratio) with increasing capacity up to 5,000 testers within FY2027/3 and they also announced a 10,000-unit target within CY2028. Although the testers capacity expansion plan includes testers for final test, we do see a good portion to be allocated to chip probing given the shift-left testing trend increasing both testing insertions and testing time before chip packaging.
- **CPO is another brand new TAM for semiconductor testing.** As insertion 2 and 3 testing equipment demand starts to rise in 2027E with scale-out CPO adoption, we expect HTSI to ship 40/70 insertion 2 and 3 equipment in 2027E, with this number growing in 2028E to 80/160 and higher in future years as CPO proliferates, and driving 52% 2026-31E test equipment & engineering services sales CAGR.
- **CPO to see content increase.** Gen 2 insertion 3 equipment may start to ship in 2027E, with higher throughput and tool ASP.
- **Insertion 2 might scale down, but not likely any time soon.** Insertion 2 equipment shipment might come down in 2029E and beyond, as foundries scale-up yield for photonic IC (PIC) in order to lessen the time consuming insertion 2 testing burden.

Source: UBS estimates

Uniquely positioned as a company with vertical integration capabilities with MEMS probes, multi-layer PCB capabilities, and automation equipment all-in-house, **CHPT** is set to capture the growing test shift-left trend in the coming years, increasing both testing insertions and testing time before chip packaging.

- **CP to scale from a lower base.** As a smaller probe card vendor, CHPT can benefit from the growing demand for AI probe cards, with 2026-31E sales CAGR for turnkey probe card robust at 41%.
- **Also a FT/SLT/burn-in beneficiary.** The company will also see final test, system-level test, burn-in content increase to play a role in their sales growth from their IC Test Board sales CAGR of 39% in 2026-31E.
- **Capacity expansion supporting growth.** As CHPT is currently capacity constrained, the robust projected sales growth is enabled by CHPT's rapid capacity expansion strategy with strong demand for its products, with one production expansion scheduled for August 2026 and a second in March 2027, doubling and tripling year-end 2025 capacity, respectively. Its Fab 3 will come online in Q428, doubling existing capacity when fully ramped.
- **MEMS capability to support share gain.** CHPT has MEMS probe capabilities stemming from its history as a smartphone application processor (AP) probe card supplier. It is in a good position to capture the growing demand for MEMS probe cards as AI/HPC are shifting to MEMS probes.
- **Probe card content expect to rise.** We also expect probe card content per device to continue rising as AI accelerators grow in die size, pin count, power consumption and packaging complexity. This should drive secular growth for both probe card suppliers and upstream component providers, making chip probing one of the most attractive areas within the semiconductor testing value chain.

Figure 6: CHPT is set to benefit with a 35% 2026-31E sales CAGR

As the leader in AI/HPC sockets, **WinWay** is set to deliver 2026-31E socket sales CAGR of 33%, underpinned by robust demand for final test and system-level test; with test content and test times rising which each iteration of new AI accelerators/CPU, more sockets and equipment will be needed in order to increase the throughput.

- **Strong accelerator/CPU roadmap to support growth.** Robust testing demand can also be inferred from AI accelerator/CPU roadmaps of Nvidia, AMD, Google, alongside tester capacity expansions by Advantest.
- **Capacity expansion underpinning future strength.** WinWay's socket pin capacity expansion will support this exceptional sales growth. from 3.5mn pins per month at year-end 2025 to 6mn currently, reaching 9mn by year-end 2026 and 14mn by year-end 2027 through expansions in Renwu, Kaohsiung. By 2027, approximately 60% of pogo-pin requirements should be internally sourced, strengthening both supply security and margins.
- **Probe card business to rise from smaller base.** Its probe card business is also set to benefit from the shift-left trend for high-end AI/HPC probe cards. WinWay leverages its existing customers' demand in addition to their MEMS partnership with Technoprobe, as we forecast WinWay's probe card sales to rise from a low base, with a 33% 2026-31E sales CAGR.

Figure 7: WinWay is set to benefit with a 33% 2026-31E sales CAGR

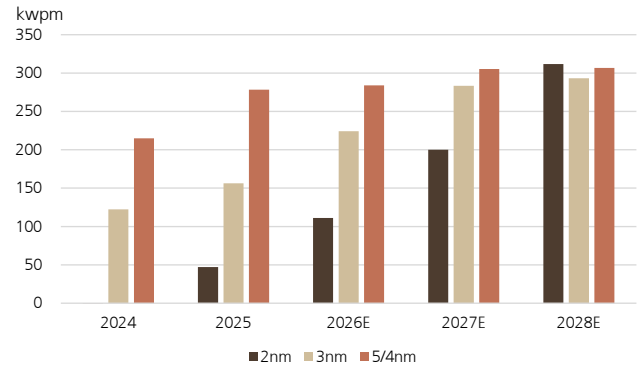
Source: UBS estimates

The AI era has materially increased the value of semiconductor testing. Compared with traditional mobile and automotive chips, AI accelerators incorporate larger compute dies, more advanced nodes, chiplet architectures, advanced packaging technologies, multiple I/O dies, and increasing HBM content. These factors drive higher-value test consumables, including advanced MEMS probe cards, multilayer interface boards, and next-generation sockets designed to support higher pin counts, thermal loading, and power delivery requirements.

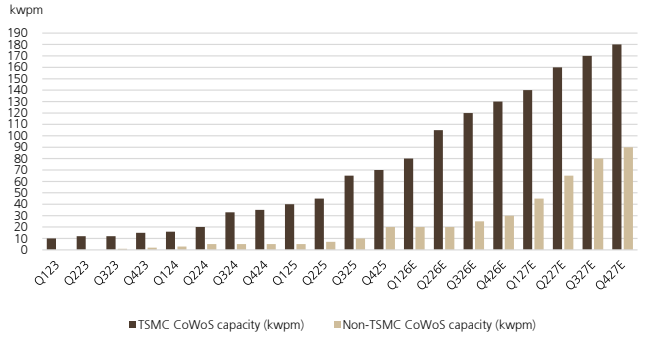
New iterations of semiconductors, especially for AI / HPC applications, are set to increase in both front-end wafer fabrication advancements and back-end packaging complexities with each iterations (i.e. Nvidia's roadmap from Blackwell to Rubin to Feynman or Google's TPU roadmap from v7 to v8 to v9). This trend is evident with TSMC's front-end and TSMC, Intel, and OSAT's back-end advanced packaging capacity expansions. For front-end, we see industry N3 capacity expanding from 156kwpm in year end 2025 to 224/283/293kpwm in year end 2026E/27E/28E, and N2 capacity from 47kwpm in year-end 2025 to 111/200/312kpwm in year end 2026E/27E/28E. For back-end, we are seeing industry CoWoS capacity rising from 90kwpm in 2025 to 160kwpm in 2026E and further expanding to 270kwpm in 2027E.

Figure 8: Industry's leading edge capacity



Source: UBS estimates

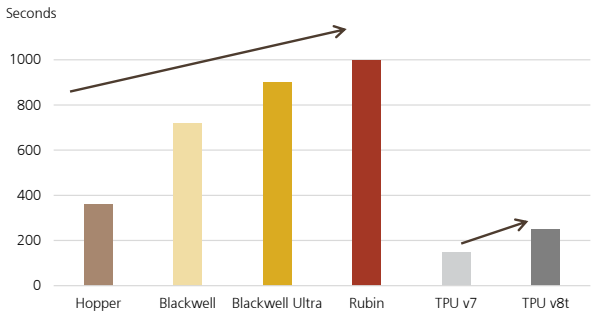
Figure 9: Industry CoWoS capacity



Source: UBS estimates

Final-test, system-level test, and burn-in content should continue to increase as AI accelerators become larger, more power-hungry and more complex. Rising thermal design power and packaging complexity increase validation requirements, driving longer test times and higher demand for test equipment to prevent testing from becoming a production bottleneck.

Figure 10: Our FT test time estimates



Source: UBS estimates

While architectural changes can affect test requirements for individual product generations, we expect the long-term trend of rising testing content to remain intact. For example, Nvidia's Rubin Ultra adopts a simpler package structure than previously expected, from a 4-die structure to a 2-die structure and Rubin Ultra HBM de-spec from HBM4E 12-Hi to initially use HBM4 8-Hi and upgrade to HBM4E 8-Hi at the latter stages, which may moderate near-term test growth. However, future products such as Nvidia's Feynman are expected to reintroduce greater package complexity, with a four-GPU per package structure. More importantly, any reduction in test time can be offset by higher production volumes, making throughput requirements equally important for testing demand.

A rising test trend that lifts all test interface vendors

Figure 11: Key vendors for each stage of the semiconductor testing industry

Below we summarize key technical items of probe cards, sockets, and load boards/PCB used for semiconductor testing:

Probe cards and chip probing (CP)

Probe cards are used during chip probing (CP), the wafer-level stage of semiconductor testing that identifies known-good dies (KGD) before packaging. As advanced packaging technologies such as CoWoS, 3D stacking and hybrid bonding become more prevalent, CP is becoming increasingly important because a single defective die or HBM stack can compromise the entire package. This is driving the industry's shift-left testing strategy, with more testing conducted earlier in the manufacturing process to identify defects before costly packaging steps.

Probe cards consist of contact elements (probes) mounted on a PCB and are used together with probers and automated test equipment (ATE). During testing, wafers are placed on the prober chuck while the probe card makes electrical contact with individual dies. The tester then performs electrical, parametric, and functional tests to determine whether each die meets performance requirements. Dies that fail testing are removed from the production flow prior to dicing and packaging.

Furthermore, probe cards are highly customised products designed for specific chip architectures and testing platforms. As AI accelerators adopt larger dies, higher pin counts and more advanced packaging technologies, probe card complexity and content value continue to increase.

Figure 12: Chip probing utilise probe cards to find known-good dies (KGD) and eliminate faulty dies

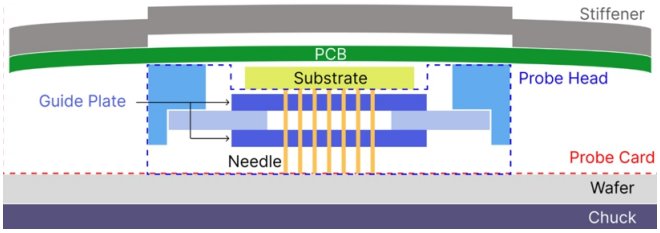
Figure 13: CP test illustration with probe card structure

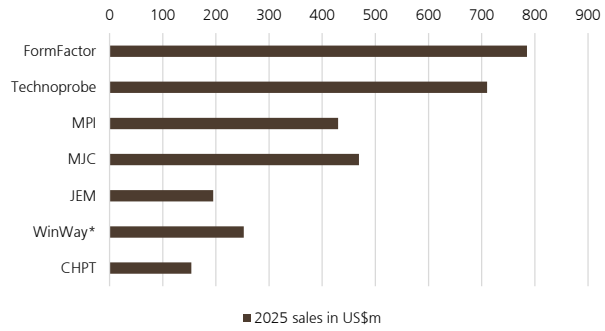


Source: Company data (CHPT)

The global probe card market remains concentrated among a handful of suppliers:

- **FormFactor (FORM.O)**: World's largest probe card company (including both logic and memory probe cards) by revenue as of year end 2025. Key supplier for HBM probe cards.
- **Technoprobe (TPRO.MI)**: World's largest logic probe card company by revenue as of year end 2025. Key supplier for AI accelerators MEMS probe cards, especially for GPU.
- **MJC (6871.T)**: Japanese company, mainly specializing in memory probe cards, 3rd largest probe card company by revenue as of year end 2025.
- **MPI (6223.TWO)**: Traditionally specializes in cantilever probe cards, now expanding its MEMS probe capacity. 4th largest probe card company by revenue as of year end 2025. A probe card supplier of AI ASICs.
- **JEM (6855.T)**: Mainly specialize in memory probe cards, 5th largest probe card company by revenue as of year end 2025.
- **WinWay (6515.TWO)**: One of the fastest-growing logic probe card suppliers. Following its collaboration with Technoprobe, WinWay rose from the 15th-largest probe card supplier in 2024 to the fifth-largest logic probe card supplier in 2025. Probe card revenue increased from 11% of sales in 2024 to 29% in 2025.
- **Chunghwa Precision Test Tech (6510.TW)**: A key supplier for smartphone application processor (AP) probe cards, and has been migrating to HPC related applications in recent years. Although its share within the probe card market is minor, it is a major supplier for probe card PCB, especially for high end probe cards with advanced PCB that has high layer counts (>40 layers, and over 80 layers for AI applications). Its key competitive advantage is its vertical integration as it manufacturers the MEMS probe and PCB in-house.

Figure 14: 2025 sales of major probe card suppliers



Source: Company data, UBS. Note: Only 29% of WinWay's 2025 sales are from probe cards.

Probe cards generally employ either **vertical** or **cantilever** architectures. **Vertical** probe cards use probes arranged perpendicular to the substrate, enabling higher pin density

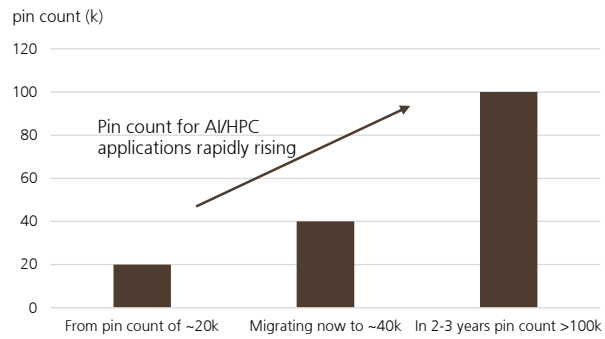
and finer pitch capability. They have become the standard for AI, HPC and other advanced semiconductor applications. **Cantilever** probe cards use angled probes extending from the PCB and are typically used in analog, driver IC and selected memory applications where pin-count and pitch requirements are less demanding. The latest generation of AI accelerators increasingly relies on **MEMS** (Micro-Electro-Mechanical Systems) based vertical probe cards, which support ultra-fine pitches, higher pin counts and improved probing precision. Technoprobe currently leads this segment with pitch capability reaching approximately 40 micrometres.

For leading-edge AI applications, probe cards must increasingly support:

1. Higher current-carrying capability (CCC).
2. Stable contact resistance.
3. Lower parasitic inductance for signal integrity.
4. Greater durability under varying thermal conditions.

For **CHPT**, with their MEMS probe capabilities stemming from their smartphone application processor probe card supply, they are in a good position to capture the growing demand for MEMS probe cards as AI/HPC are shifting to MEMS probes. We also expect probe card content per device to continue rising as AI accelerators grow in die size, pin count, power consumption and packaging complexity. This should drive secular growth for both probe card suppliers and upstream component providers, making chip probing one of the most attractive areas within the semiconductor testing value chain.

Figure 15: Probe card pin count growth trajectory

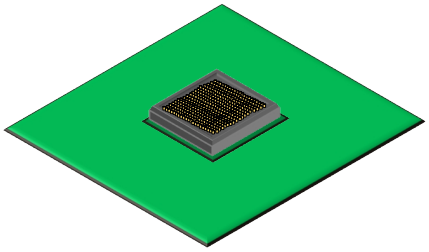


Source: UBS estimates

Sockets

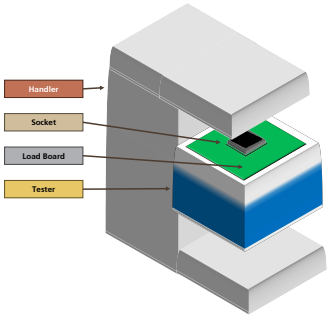
Semiconductor test sockets are electro-mechanical interfaces that are used post chip probing and chip packaging process to test the functionality of the chips. Sockets are placed on to load boards on top of testers during the final test/system level test processes. Handlers place the chips onto the sockets, and pins inside the sockets enable the testers to read the signals from the device under test (DUT, i.e. the packaged chips), with tester signals fanning out from beneath the PCB load board.

Figure 16: Socket illustration



Source: UBS

Figure 17: FT equipment/ consumables



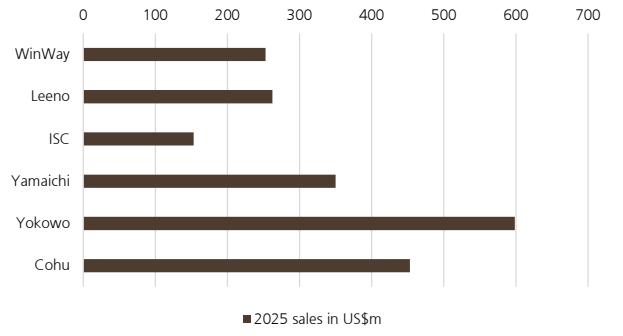
Source: UBS

As AI accelerators become larger and more complex, socket requirements continue to increase. High-end sockets typically comprise a socket housing, alignment plate, integrated thermal-control components and contact elements that connect the DUT to the tester. Spring probes (pogo pins) are the most common choice for HPC sockets, with high durability, individual probe replacement flexibility, and consistent contact force. FT and SLT sockets account for more than 70% of the total socket market, with burn-in sockets representing the remainder.

Compared with the probe card market, the socket industry is more fragmented. Key suppliers include:

- **WinWay (6515.TW)**: A major share gainer in AI/HPC sockets, with strong exposure to Nvidia and AMD. The company specializes in high-performance coaxial sockets and is developing its next-generation HyperSocket platform. It is also expanding into probe cards through its partnership with Technoprobe.
- **Leeno (058470.KQ)**: Vertically integrated supplier focused on smartphone AP and memory sockets.
- **ISC (095340.KQ)**: Leading memory socket supplier with elastomer expertise.
- **Smiths Interconnect (Acquired by Molex)**: A key player in AI/HPC socket industry, with its DaVinci coaxial sockets able to support high frequency connectivity testing.
- **Yamaichi (6941.T)**: Leading Japanese socket supplier with strong automotive exposure.
- **Yokowo (6800.T)**: Major provider of contact probes and socket pins.
- **Cohu (COHU.O)**: Broad test-solutions provider spanning ATE, handlers and sockets, with greater auto/industrial/consumer exposure.

Figure 18: 2025 sales of major socket suppliers



Source: Company data, UBS. Note: Most socket suppliers are companies with multiple business segments, i.e. Yokowo and Cohu.

AI accelerators are pushing socket requirements beyond 10,000 pins, making **coaxial sockets** the industry standard for leading-edge AI/HPC devices. These sockets must support transmission speeds of up to 224G while handling significantly higher thermal design power (TDP) during testing.

Elastomer technology is increasingly being adopted alongside spring-probe (pogo-pin) architectures to reduce chip damage and improve contact reliability. WinWay's next-generation **HyperSocket** integrates elastomer materials between the DUT and spring probes, improving probe lifetime, reducing cleaning requirements and enhancing production efficiency. We believe HyperSocket could become an important differentiator as next-generation AI accelerators demand higher pin counts, bandwidth and thermal performance. We estimate HyperSocket could contribute approximately 5% of WinWay's revenue in 2027E while carrying a 20-30% ASP premium versus conventional coaxial sockets.

The transition toward larger AI packages, higher pin counts and faster data-transfer speeds should continue to increase socket content per device. We expect this trend to support long-term growth in the socket market, with technology leaders such as WinWay well positioned to gain share through next-generation solutions including

HyperSocket.

Source: Company data (WinWay)

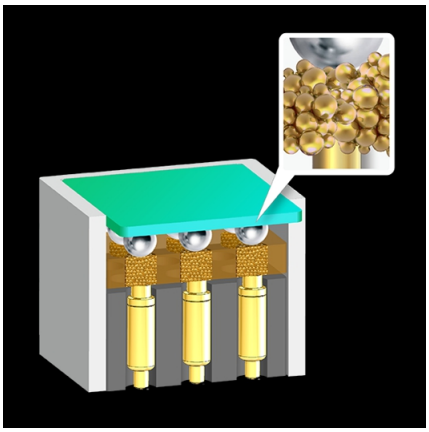
Figure 21: HyperSocket



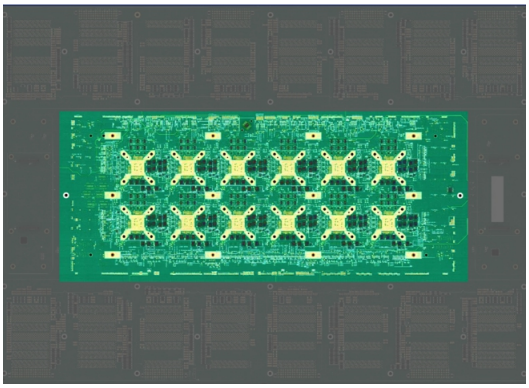
Source: Company data (WinWay)

Load Board/Interface board

Load boards are specialised printed circuit boards (PCBs) that connect the tester to the device under test (DUT) during final test (FT) and system-level test (SLT). Acting as the electrical interface between the packaged chip and automated test equipment (ATE), load boards are responsible for power delivery and high-speed signal transmission throughout the testing process. As AI and HPC devices become increasingly complex, load board requirements continue to rise. **Multilayer construction** is crucial as modern load boards often require more than 50 layers for smartphone application processors and over 80 layers for leading-edge AI accelerators to support higher pin counts, dense signal routing and greater power delivery demands. At the same time, **impedance control** is an important factor as maintaining signal integrity is becoming increasingly important as interconnect bandwidth rises and high-speed SerDes blocks become more prevalent. These trends are driving greater technology content and value per load board.

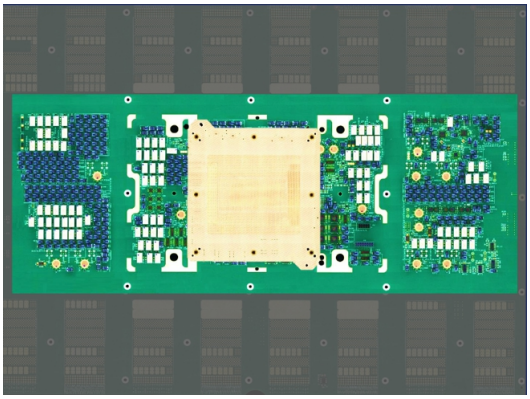
We expect load board content to increase alongside AI chip complexity, larger package sizes and higher interface speeds, benefiting suppliers with advanced multilayer PCB capabilities such as CHPT.

Figure 22: CHPT's AP load board



Source: Company data (CHPT)

Figure 23: CHPT's AI load board



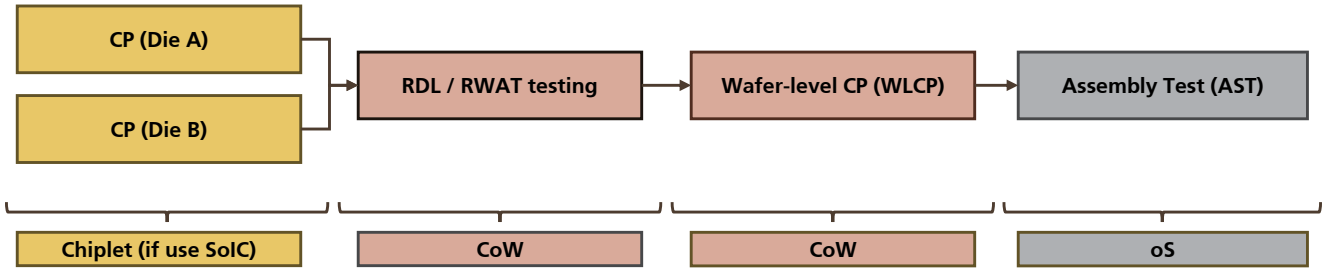
Source: Company data (CHPT)

Shift-left igniting secular growth for chip probing

The industry's adoption of shift-left testing should drive a multi-year structural growth opportunity for chip probing (CP) and its supply chain. As advanced packaging costs rise and AI accelerators become increasingly complex, semiconductor manufacturers are placing greater emphasis on identifying known-good dies (KGD) before packaging. This

underpins our above-consensus forecasts for **Chunghwa Precision Test (CHPT)**, with 2027E/28E sales 7%/15% above consensus driven by structural AI/HPC probe card and test consumables demand, capacity expansion, and increasing test interface content as test insertions and test time increase. **WinWay** should also benefit through its growing probe card business alongside partner Technoprobe, with probe card sales expected to grow 94%/72% YoY in 2026E/27E following 161%/260% growth in 2024/25.

Figure 24: CP is set to grow substantially with shift-left, each packaging step set to be MORE costly than the prior step

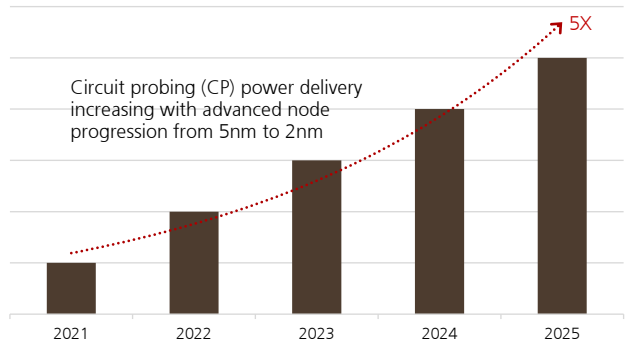


Source: UBS

The economics of advanced packaging reinforce this trend. Heterogeneous integration, chiplet architectures and 2.5D/3D packaging significantly increase package value, while defects identified late in the manufacturing process can lead to substantial scrap costs. To mitigate this risk, foundries and OSATs such as TSMC and ASE employ distributed testing flows incorporating KGD, known-good-stack (KGS) and assembly test screening, to catch defects before the components enter a multi-week packaging cycle (>2 weeks for CoW and 2 weeks for oS). The importance of these tests rises as AI clusters become increasingly dependent on component reliability and low defective-parts-per-million (DPPM) rates. Given the multiplicative yield degradation, a 300bps yield decline at just one manufacturing stage (e.g. dropping from 99.5% to 96.5%) reduces overall integrated four-stage yield from 98.0% to 95.0%; on a 500,000 unit ramp at US $10,000 per unit, this 3% scrap delta translates into around US$150m in unrecoverable losses given >6-month manufacturing lead times.

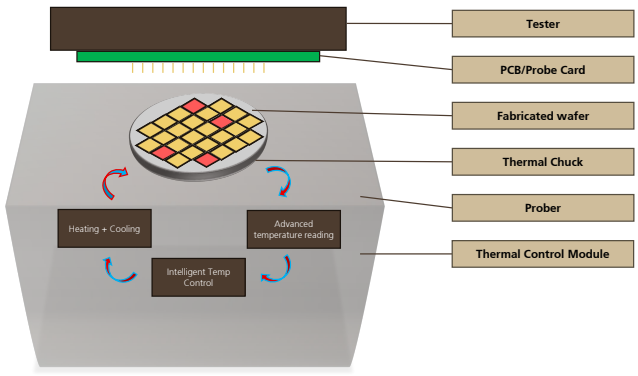
At the same time, rising chip power consumption is increasing the technical difficulty of wafer-level testing. As chip thermal design power scales beyond 1,000W and power density is expected to surge another 8x by 2030, traditional wafer-level chip probe (WLCP) encounters severe physical bottlenecks. Finer probe pitches and higher power densities increase the risk of overheating, probe needle burnout and yield degradation, creating demand for more advanced probing and thermal control solutions.

Figure 25: CP power delivery trend rises with process tech evolution



Source: UBS

Figure 26: Thermal control module inside probers are essential to control wafer temperature



Source: UBS

Hermes Testing (HTSI) is a key beneficiary of this trend. Leveraging its long-standing relationship with TSMC and expertise in semiconductor test solutions, HTSI supplies advanced thermal control modules used alongside leading-edge probers (made by Tokyo Electron), particularly for AI applications. These thermal control modules are

required for high TDP semiconductor wafer probe in order to maintain the temperature of the chuck to avoid needle burns or probe card damages. We estimate HTSI will ship approximately 3,000 thermal-management modules in 2027E, up from 1,200 in 2026E, supporting sales growth of 127%/152% in 2026E/27E. HTSI is also the partner for prober installation, prober maintenance and services. In addition, HTSI provides high-end chuck processing services, an area that should benefit from increasing package sizes and higher wafer warpage associated with advanced packaging.

Beyond thermal control modules, HTSI also supplies consumables and customised solutions for wafer-level testing, including probe card cleaning sheets and laser-based probe head cleaning systems. As probing intensity increases under the shift-left testing model, demand for cleaning and maintenance solutions should rise alongside probe card utilisation. Currently, cleaning sheets is around 5% of sales, but we believe it could gain traction in 2027/28E and beyond. We see additional upside from future modular laser cleaning systems that could be integrated directly with probers, further expanding HTSI's content opportunity within advanced wafer-level testing.

Rapid capacity expansions accelerating growth

Industry test interface suppliers are expanding capacity aggressively to meet rising AI and HPC demand. As advanced semiconductors require higher-performance probe cards, sockets and interface boards, capacity additions are becoming increasingly important to support growth across both wafer-level and package-level testing.

We believe **CHPT** and **WinWay** are well positioned to gain share within the high-end AI/HPC test interface market. Taiwanese suppliers benefit from their proximity to leading fabless customers and the growing preference for localised supply chains, particularly for advanced testing applications where responsiveness and engineering support are critical. Against a backdrop of tight industry supply, both companies have announced significant capacity expansion plans over the next two to three years.

CHPT: capacity expansion supporting AI/HPC share gains

CHPT's existing capacity is effectively fully utilised and the company is pursuing both near-term and long-term expansion. Near-term growth will come from leased facilities, with one production expansion scheduled for August 2026 and a second in March 2027, doubling and tripling year-end 2025 capacity, respectively. Longer term, CHPT's new Fab 3 facility in Pingzhen will significantly expand in-house PCB manufacturing and wet-processing capacity, with mass production expected around Q428, expected to double existing capacity when fully ramped.

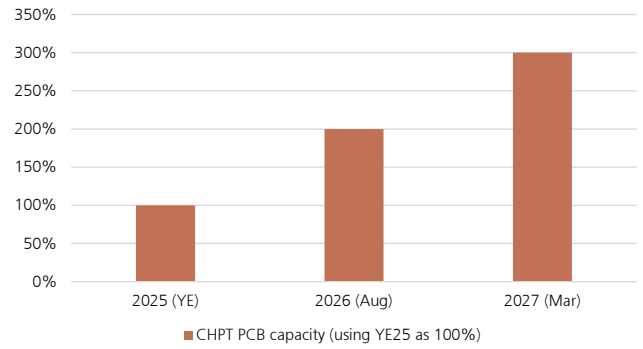
Combined with increasing exposure to higher-value AI/HPC products, including turnkey CPU probe cards and TPU FT/SLT/burn-in boards, we expect CHPT to deliver revenue growth of 49%/75%/43% in 2026E/27E/28E.

WinWay: scaling for the next phase of AI demand

WinWay's capacity is expected to increase from 3.5mn pins per month at year-end 2025 to 6mn currently, reaching 9mn by year-end 2026 and 14mn by year-end 2027 through expansions in Renwu, Kaohsiung. By 2027, approximately 60% of pogo-pin requirements should be internally sourced, strengthening both supply security and margins.

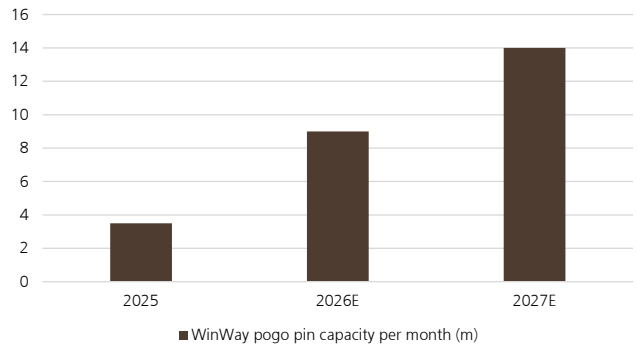
We estimate these capacity additions will support revenue growth of 105%/73%/71% in 2026E/27E/28E.

Figure 27: Announced capacity expansions for CHPT



Source: Company data, UBS

Figure 28: Announced capacity expansions for WinWay



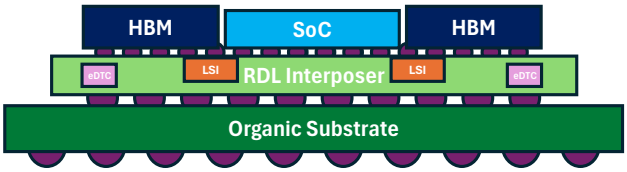
Source: Company data, UBS

Advanced packaging growth remains the key demand driver

Capacity expansion by test interface vendors is ultimately supported by continued investment throughout the advanced packaging ecosystem, from providers such as TSMC, ASE, Intel, and Amkor. During the Q226 earnings calls, TSMC raised its recent 2026 capex from US$52-56bn to US$60-64bn and ASE raised its 2026 capex from US $8.5bn to US$10.5bn, with both companies citing robust demand supporting the capex raise. We believe capex for the next two years will be even higher than 2026, implying continuous growth in future years. With advanced packaging technologies getting significantly more complex and with larger form factor, illustrated by the upcoming ramp of both TSMC's CoPoS (chip-on-panel-on-substrate) and Intel's EMIB-T (embedded multi-die interconnect bridge) packaging technologies, test interface solution providers will benefit with more value added consumables (see our CoPoS vs EMIB-T deep dive).

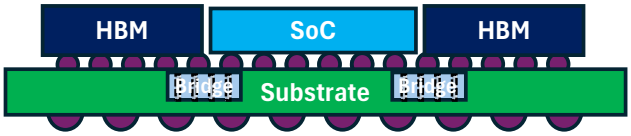
We expect test interface content growth to outpace unit growth. For instance, test socket's ASP directly correlates with its pin counts - with the addition of 20-30% more pins inside the sockets, socket ASP can grow 20-30% or more as the socket might require significant cooling capabilities as the TDP of the DUT rises with its larger form factor. Unlike prior semiconductor cycles, much of the current demand is driven by rising test interface content per device rather than unit growth alone.

Figure 29: TSMC's CoPoS



Source: UBS

Figure 30: Intel's EMIB-T



Source: UBS

Accelerators still in focus with TPU as another significant growth driver

Nvidia has been the primary driver of testing content growth over the past several years, benefiting the entire semiconductor testing supply chain. We expect this trend to continue as GPU architectures evolve from Blackwell to Rubin and then to Feynman, with increasing process node complexity, larger package sizes and more advanced packaging technologies driving higher testing value per device.

Nvidia should remain a major contributor to both CHPT and WinWay, with GPUs continuing to serve as their core growth engine. Both companies are positioned to gain share with Rubin. We estimate WinWay's socket share could improve from a 50/50 split with Smiths Interconnect in prior generations to 60/40 with Rubin, while CHPT is gaining

share in test interface PCBs and is positioned to supply around 70% of Rubin probe card and final test PCB content. Nvidia currently accounts for approximately 50% of WinWay's sales and 30% of CHPT's sales. Both Nvidia GPUs and Google TPUs increase testing demand through higher content per device rather than unit growth alone.

Beyond Nvidia, Google's TPU roadmap represents a significant incremental growth opportunity. Following the successful ramp of TPU v8t with MediaTek as design partner, **CHPT** is positioned to supply probe card PCBs, final test load boards, system-level test boards and burn-in boards. For v9, although the final test interface vendors are yet to be decided, we believe as the current supplier, CHPT will still be supplying PCB for final test, system level test, and burn-in, with potential to continue to supply PCB for probe cards. **WinWay** should also benefit as the socket supplier for both TPU v8t and the next-generation TPU v9 platform. We believe MediaTek's increasing share gain for Google TPUs will also benefit the local Taiwanese test interface supply chain.

We view TPU v9 as a particularly attractive opportunity given its large four-die package architecture based on Intel's EMIB-T packaging technology, which should drive higher testing content. We estimate production of 4mn TPU v8t units in 2027E, followed by 2.3mn TPU v9 packages (9.2mn dies) and an additional 2mn TPU v8t units in 2028E. Importantly, while EMIB-T packaging is expected to be performed in Malaysia, we believe the majority of advanced testing value should remain within the Taiwanese testing ecosystem. Leading testing providers, including ASE and KYEC, maintain substantial testing operations across Taiwan and Southeast Asia, supporting continued participation by Taiwanese test interface suppliers. See our latest MediaTek report.

CPU business as a supplemental catalyst for test interface in an agentic world

We believe semiconductor test interfaces are an underappreciated beneficiary of the emerging agentic AI ecosystem. UBS estimates the CPU market will expand to US $170bn by 2030E from US$31bn in 2025 and US$71bn in 2027E, driven by rising deployment of AI infrastructure. As CPU-to-GPU ratios increasingly approach 1:1 in AI clusters, demand for testing interfaces should expand alongside CPU volumes. TSMC is the main CP test provider in the industry, with probe card suppliers aiding its massive demand by supplying probes, such as TSMC's GPU probe cards supported by Technoprobe's probes. However, with capacity now becoming scarce with strong front and back-end demand, TSMC is outsourcing its CP business to ASE and KYEC, further broadening the testing supply chain. This is where new probe card vendors come in—smaller probe card players in the past, such as **WinWay** and **CHPT**, now have the opportunity to gain significant, non-GPU share from TSMC, as they have MEMS probe capabilities (WinWay's MEMS probes are from its strategic partnership with Technoprobe) and has a long established relationship with the fabless companies such as Nvidia via supplying non-probe card consumables such as sockets and PCB. Of which, CPU projects have become the main area for CHPT and WinWay to expand their footprint.

We expect both companies to benefit from the ramp of Nvidia's ARM-based Vera CPU and Google's ARM-based Axion CPU in 2026E-27E. WinWay is positioned to supply sockets and probe cards for Vera and sockets for Axion, while CHPT should provide probe cards and test interface PCBs for both Vera and Axion, with particularly strong exposure to Axion. Additional upside could come from AMD's Venice CPU, where WinWay is well positioned and CHPT could gain indirect exposure through testing-equipment procurement channels. We estimate CPU-related revenue will represent low to mid-teens % of CHPT sales in 2026E, increasing to 20-30% in 2027E as the company expands its turnkey probe card solutions for Axion. For WinWay, CPU-related demand could account for approximately 30% of sales in 2026E-27E. Importantly, CPU programmes diversify exposure beyond AI GPUs and provide a second structural growth driver for test interface suppliers.

CPO testing fuelling future growth for semiconductor testing

As interconnect bottlenecks increasingly shift from the memory wall to the copper wall, we believe co-packaged optics (CPO) adoption is inevitable over the longer term. Testing remains one of the key bottlenecks to CPO deployment, as optical validation differs

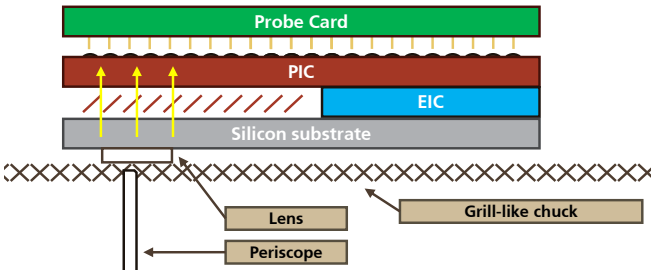
fundamentally from the electrical testing processes that have dominated semiconductor manufacturing for decades. As a result, CPO is creating a new testing opportunity across the semiconductor equipment and consumables ecosystem. We have written extensively on CPO and the opportunities that it brings to the semiconductor supply chain, see our CPO deep dive, our thoughts on CPO timing, 2026 SiPhIA conference takeaways, and SEMICON 2026 takeaways.

Various test equipment suppliers are scrambling to come up with ideal testing equipment across the four insertions of CPO testing, with solutions to ensure both optical and electrical signal integrity of the CPO solutions. The four insertions are:

- **Insertion 1: Electronic IC (EIC)/Photonic IC (PIC) test.** Single-side wafer test that has dedicated probe cards to test the fabricated EIC/PIC wafers.
- **Insertion 2: Optical/Electrical test.** Double sided wafer test, testing the hybrid bonded (e.g. via TSMC's COUPE) EIC and PIC wafers by an opto-electrical test that verifies the electrical signals on the top and optical signal on the bottom of the hybrid bonded wafers.
- **Insertion 3: Optical engine (OE) test.** The OE tests are done to ensure the quality of the OEs and with FAU (Fiber Array Unit) attached, to ensure the signal integrity of the OEs. The testing equipment needs to be able to handle 224G per channel data rates, requiring high unit per hour (UPH) throughput, meticulous dirt mitigation, and maintaining a near 100% contact rating on high-speed sockets.
- **Insertion 4: ASIC final test.** This final test step is established post the OEs are packaged together with the ASIC. The complete ASIC package (now with CPO) is now tested for opto-electrical functionalities.

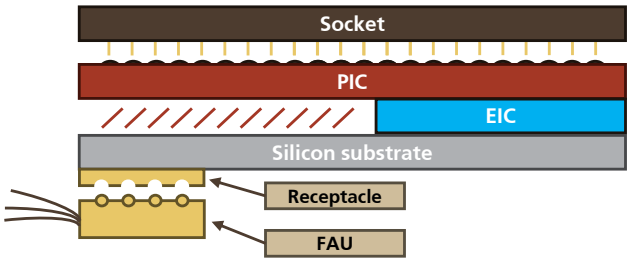
As it stands, insertion 2 and insertion 3 are the two areas where there are the most debates in the industry. Insertion 3 suppliers such as Chroma have noted the trend of "shift-to-middle" paradigm centered on insertion 3. In high-density scale-out switches deploying up to 32 optical engines (e.g. Nvidia's Spectrum-X architectures), any OE defect results in package scrap at the CoWoS level, making 100% known-good die (KGD) validation at the singulated OE stage an absolute commercial requirement.

Figure 31: An illustration for insertion 2 test method



Source: UBS

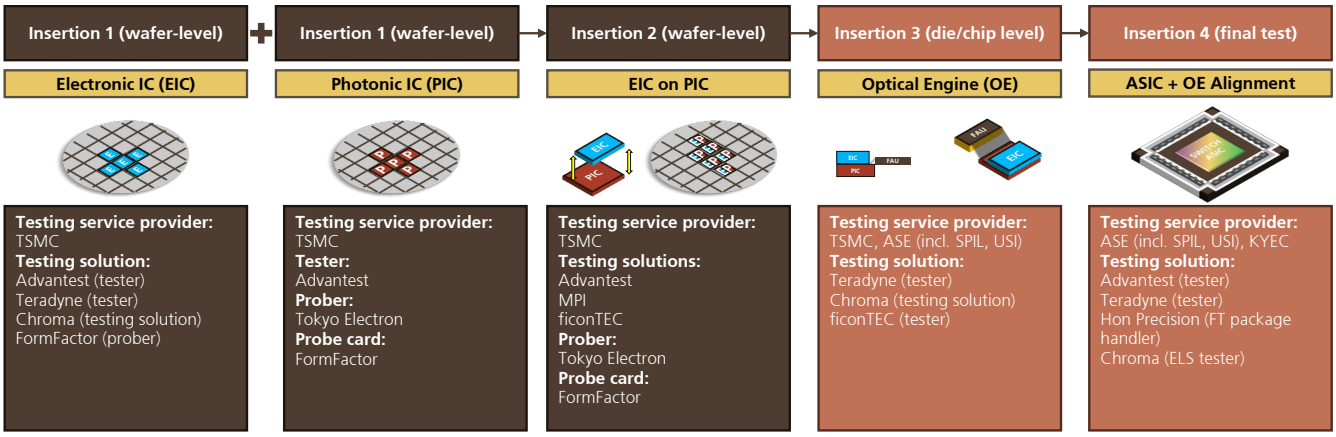
Figure 32: An illustration for insertion 3 test method



Source: UBS

As shown in the below figure, as there are no set standards for the testing equipment, throughput and stability are now the main targets and areas of competition for the major players in the field. Notable ones for each insertions are listed.

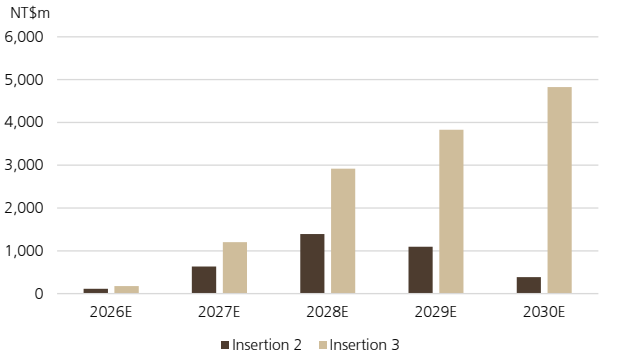
Figure 33: CPO testing flow chart with key suppliers



Source: UBS

With its 25 years of precision test equipment expertise, ficonTEC is an early mover for CPO test equipment and has key know-how for optical alignment, which is quintessential for optical test. **Hermes Testing**, through its partnership with ficonTEC, is set to be a major beneficiary once CPO proliferates in 2027E-28E. As the partner of ficonTEC, Hermes Testing is the key enabler that can help ficonTEC achieve HVM for its CPO testing equipment. As of now, our view is that both insertion 2 and insertion 3 should be required within the next two years, despite the difficulties surrounding double-sided wafer probing (insertion 2), as the yield for OEs is still not high enough to avoid defective dies. Finding out known-good OEs will be crucial before the FAU coupling process during the latter stages of CPO packaging, to prevent impeding the final package with multiple OEs attached to the switch ASIC (e.g. 32 OEs on Nvidia's Spectrum-X). We estimate Hermes Testing will ship 40/70 units of insertion 2/3 testing equipment in 2027E, with upside to these numbers as we view Hermes Testing will likely assist with the ramp up for Gen 2 insertion 3 equipment in 2027E. Gen 2 insertion equipment will come with better throughput and ASP.

Figure 34: HTSI CPO equipment sales to pick up in 2027/28E with 541%/135% YoY growth



Source: UBS estimates

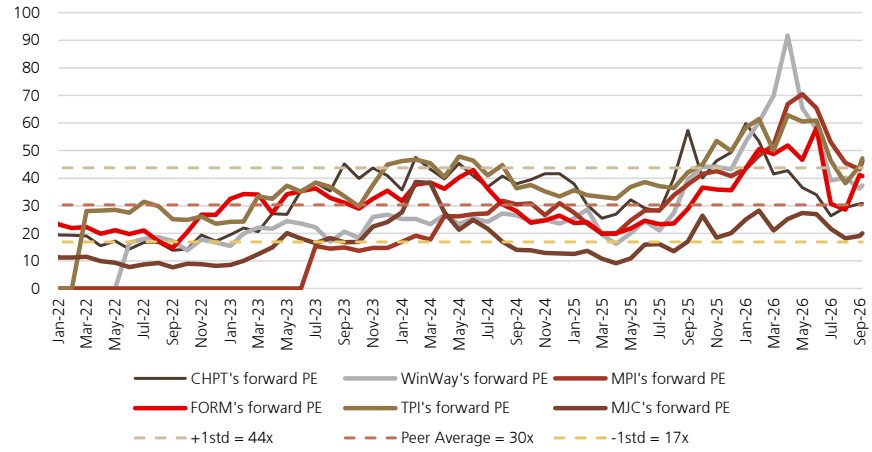
Beyond insertions 2 and 3, HTSI is also positioned to participate in insertion 1 testing through customised prober solutions for photonic integrated circuit (PIC) testing. We believe these solutions could eventually be packaged as licensable intellectual property, creating an additional long-term growth opportunity as CPO adoption broadens. While near-term testing growth is driven by AI accelerators, CPO represents the next major expansion cycle for semiconductor testing. We believe HTSI is uniquely positioned to participate across multiple test insertions, providing exposure to a potentially significant source of incremental revenue beginning in 2027E.

Valuation comparison

We set up three peer groups for valuation comparison: probe card, sockets, and equipment vendors.

For probe card vendors, the peer group's average NTM PE post 2022 is around 30x, and the group is currently trading at around 39x NTM PE. We value CHPT using 31x average 2027-28E PE, in-line with its historical average of 31x and underpinned by a 31% 2027-31E earnings CAGR.

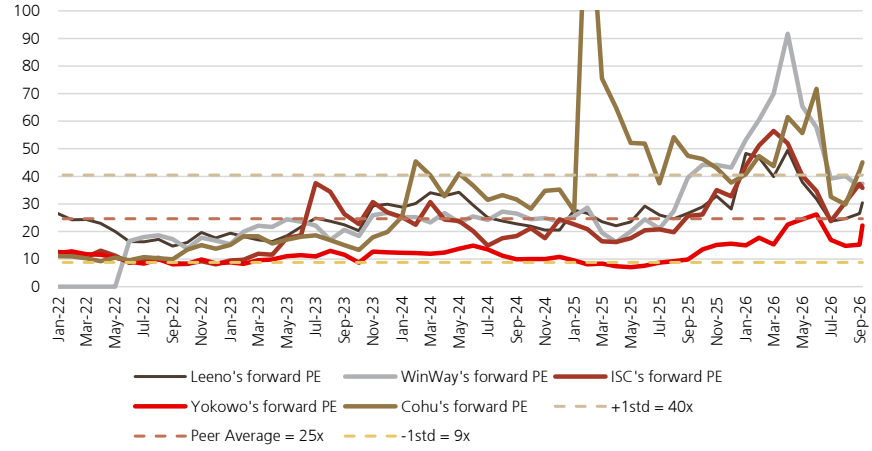
Figure 35: Key probe card vendors' 12-month forward PE band (x)



Source: LSEG, UBS

For socket vendors, the peer group's average NTM PE post 2022 is around 25x, and the group is currently trading at around 39x NTM PE. We value WinWay using 30x average 2027-28E PE, in-line with its historical average of 30x and underpinned by a 30% 2027-31E earnings CAGR.

Figure 36: Key socket vendors' 12-month forward PE band (x)



Source: LSEG, UBS

For equipment vendors, the peer group's average NTM PE post 2022 is around 35x, and the group is currently trading at around 41x NTM PE. We value HTSI using 31x average 2028E PE, underpinned by a 32% 2027-31E earnings CAGR. We use 2028 PE as our view is that 2028 is the year thermal control modules and CPO adoption grow from the initial ramping up stage to mass adoption stage. We believe that using handlers as a peer group is justifiable for a unique company like HTSI, with thermal control modules for chip probing sharing similar characteristics to active thermal control used for final test, in addition to Hon Precision and Chroma having exposure to CPO test equipment.

Valuation Method and Risk Statement

Tech investing involves risk. It is difficult for the investment community, UBS included, to project the financial results of tech companies, as their operating models are highly volatile and unpredictable, and they compete in a highly dynamic marketplace. In addition to their low predictability, valuing tech stocks can be challenging because neither traditional nor non-traditional valuation measures have provided much insight into how tech stocks trade.

We value Chroma ATE using a PE methodology.
Downside risks include weaker-than-expected demand for high-performance computing dampening its semiconductor testing business and slower-than-expected recovery in EV investments into battery capacity installations.

We value Chunghwa Precision Test, Hermes Testing and WinWay based on PE methodology.
Risks: Faster- or slower-than-expected front-end/CoWoS capacity expansion could result in CHPT, HTSI and WinWay gaining/losing probe card/board orders from major foundries and OSATs. Potential risk of competition (from either local or foreign companies) achieving technological advancements could result in these companies losing market share from end customers, major foundries, and OSATs. Better- or worse-than-expected AI growth could lead to a ramp-up or a slowdown of product orders from customers, major foundries, and OSATs to CHPT, HTSI and WinWay, affecting long-term revenue growth potential. A potential slowdown or delay of the rollout for technological advancements for technologies such as SoIC, CoPoS, and even CPO, would limit future growth potential. Rising raw material costs may directly impact their margins for equipment shipments.

We value Hon Precision based on PE multiple.
Faster- or slower-than-expected CoWoS capacity expansion could indirectly result in Hon Precision gaining or losing equipment orders from major customers; the risk of competition from either local or foreign companies achieving technological advancements could result in Hon Precision losing market share from its major customers; better- or worse-than-expected AI growth could lead to a ramp-up or a slowdown of equipment orders from customers to Hon Precision, affecting long-term revenue growth potential; a potential slowdown or delay in the rollout of technological advancements for technologies, such as MCL and CPO, would limit future equipment orders; rising raw material costs may directly impact Hon Precision's margins for equipment shipments.

Required Disclosures

This document has been prepared by UBS Securities Pte. Ltd., Taipei Branch, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates, including former Credit Suisse AG and its subsidiaries, branches and affiliates are referred to herein as "UBS".

For information on the ways in which UBS manages conflicts and maintains independence of its UBS Global Research product; historical performance information; certain additional disclosures concerning UBS Global Research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. Unless otherwise indicated, information and data in this report are based on company disclosures including but not limited to annual, interim, quarterly reports and other company announcements. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 07 October 2026 08:25 AM GMT. UBS has designated certain UBS Global Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS Global Research publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS Global Research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on ubs-quant-answers@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

Analyst Certification:
Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

UBS Global Research: Global Equity Rating Definitions

12-Month Rating	Definition	Coverage[1]	IB Services[2]
Buy	FSR is > 6% above the MRA.	55%	24%
Neutral	FSR is between -6% and 6% of the MRA.	39%	20%
Sell	FSR is > 6% below the MRA.	6%	21%

Source: UBS. Rating allocations are as of 30 September 2026.
1:Percentage of companies under coverage globally within the 12-month rating category.
2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS:Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES:UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Consultation (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

Research analysts contributing to this report who are employed by any non-US affiliate of UBS Securities LLC are not registered/ qualified as research analysts with FINRA. Such analysts may not be associated persons of UBS Securities LLC and therefore are not subject to the FINRA restrictions on communications with a subject company, public appearances, and trading securities held by a research analyst account. The name of each affiliate and analyst employed by that affiliate contributing to this report, if any, follows.

UBS Securities Pte. Ltd., Taipei Branch: Ryan Sun, Sunny Lin.

UBS Global Research Disclaimer

This document has been prepared by UBS Securities Pte. Ltd., Taipei Branch, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates, including former Credit Suisse AG and its subsidiaries, branches and affiliates are referred to herein as "UBS".

Any opinions expressed in this document may change without notice and are only current as of the date of publication. Different areas, groups, and personnel within UBS may produce and distribute separate research products independently of each other. For example, research publications from **UBS CIO** are produced by UBS Global Wealth Management. **UBS Global Research** is produced by UBS Investment Bank. Research methodologies and rating systems of each separate research organization may differ, for example, in terms of investment recommendations, investment horizon, model assumptions, and valuation methods. As a consequence, except for certain economic forecasts (for which UBS CIO and UBS Global Research may collaborate), investment recommendations, ratings, price targets, and valuations provided by each of the separate research organizations may be different, or inconsistent. You should refer to each relevant research product for the details as to their methodologies and rating system. Not all clients may have access to all products from every organization. Each research product is subject to the policies and procedures of the organization that produces it.

This document is provided solely to recipients who are expressly authorized by UBS to receive it. If you are not so authorized you must immediately destroy the document.

UBS Global Research is provided to our clients through UBS Neo, and in certain instances, UBS.com and any other system or distribution method specifically identified in one or more communications distributed through UBS Neo or UBS.com (each a system) as an approved means for distributing UBS Global Research. It may also be made available through third party vendors and distributed by UBS and/or third parties via e-mail or alternative electronic means.

All UBS Global Research is available on UBS Neo. Please contact your UBS sales representative if you wish to discuss your access to UBS Neo. Where UBS Global Research refers to "UBS Evidence Lab Inside" or has made use of data provided by UBS Evidence Lab and you would like to access that data please contact your UBS sales representative. UBS Evidence Lab data is available on UBS Neo. The level and types of services provided by UBS Global Research and UBS Evidence Lab to a client may vary depending upon various factors such as a client's individual preferences as to the frequency and manner of receiving communications, a client's risk profile and investment focus and perspective (e.g., market wide, sector specific, long-term, short-term, etc.), the size and scope of the overall client relationship with UBS Global Research and UBS Evidence Lab and legal and regulatory constraints. UBS HOLT and UBS Pharma Values are offerings of UBS Global Research. HOLT Lens is a corporate performance platform offering that provides an objective accounting-led framework for comparing and valuing companies and is available to clients of UBS Global Research; for further details and pricing please contact your UBS Sales representative. In particular, HOLT has a variety of warranted prices based on the scenario chosen; please mail UBS Securities LLC, 11 Madison Avenue, New York, NY 10010, USA, Attention: Investment Research, if you are interested in the warranted price on a particular company, again subject to commercial considerations. UBS Pharma Values is an analytical tool that involves the creation of a number of individual product net present value calculations, based on published forecasts of sales for pharmaceuticals, and is available to clients of UBS Global Research; for further details and pricing please contact your UBS Sales representative. For all other specific disclaimers, please see https://www.ubs.com/disclosures.

When you receive UBS Global Research through a system, your access and/or use of such UBS Global Research is subject to this UBS Global Research Disclaimer and to the UBS Neo Platform Use Agreement (the "Neo Terms") together with any other relevant terms of use governing the applicable System.

When you receive UBS Global Research via a third party vendor, e-mail or other electronic means, you agree that use shall be subject to this UBS Global Research Disclaimer, the Neo Terms and where applicable the UBS Investment Bank terms of business (https://www.ubs.com/global/en/investment-bank/regulatory.html) and to UBS's Terms of Use/Disclaimer (https://www.ubs.com/global/en/legalinfo2/disclaimer.html). In addition, you consent to UBS processing your personal data and using cookies in accordance with our Privacy Statement (https://www.ubs.com/global/en/legalinfo2/privacy.html) and cookie notice (https://www.ubs.com/global/en/legal/privacy/users.html).

If you receive UBS Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via UBS Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via UBS Global Research or otherwise, without the prior written consent of UBS. You agree not to use UBS Global Research in any artificial intelligence system, without the prior written consent of UBS.

In certain circumstances you may receive UBS Global Research otherwise than in the capacity of a client of UBS and you understand and agree that under these circumstances (i) the UBS Global Research is provided to you for information purposes only; (ii) for the purposes of receiving it you are not intended to be and will not be treated as a "client" of UBS for any legal or regulatory purpose; (iii) the UBS Global Research must not be relied on or acted upon for any purpose; and (iv) such content is subject to the relevant disclaimers that follow.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

UBS notes that no globally accepted framework or definition (legal, regulatory or otherwise) currently exists, nor is there a market consensus as to what constitutes an "ESG" (Environmental, Social or Governance) or an equivalent-label, or as to what precise attributes are required for the Information (as defined below) to be defined as ESG or equivalently-labelled. Any information, data or other content including from a third party source contained, referred to herein or used for whatsoever purpose by UBS or a third party ("Information"), in relation to any actual or potential ESG objective, issue or consideration is not intended to be relied upon for ESG classification, regulatory regime or industry initiative purposes ("ESG Regimes"). Nothing in these materials is intended to convey, suggest or indicate that UBS considers or represents any product, service, person or body mentioned in these materials as meeting or qualifying for any ESG classification, labelling or similar standards that may exist under the ESG Regimes. UBS has not conducted any assessment of compliance with ESG Regimes. Parties are reminded to make their own assessments for these purposes.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a

complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. For further information on the ways in which UBS Global Research manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS Global Research recommendations, please visit https://www.ubs.com/disclosures.

UBS Global Research will initiate, update and cease coverage solely at the discretion of UBS Global Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

UBS Global Research may utilise artificial intelligence tools ("AI Tools") in the preparation of this document. Notwithstanding any such use of AI Tools, this document has undergone human review.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by UBS Global Research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Please note that all transactions conducted by UBS are consistent with sanctions regulations imposed by Switzerland, the European Union, the United Nations, the United Kingdom and the United States, per UBS' global sanctions policy. UBS opinion as to future investment worthiness assumes no new sanctions are imposed.

US persons are prohibited from purchasing or selling securities of certain companies designated as being associated with the Chinese Military in accordance with the amended US Presidential Executive Order 13959.

United Kingdom: This material is distributed by UBS AG, London Branch to persons who are eligible counterparties or professional clients. UBS AG, London Branch is authorised by the Prudential Regulation Authority and subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. **Europe:** Except as otherwise specified herein, these materials are distributed by UBS Europe SE, a subsidiary of UBS AG, to persons who are eligible counterparties or professional clients (as detailed in the Bundesanstalt fur Finanzdienstleistungsaufsicht (BaFin) Rules and according to MIFID) and are only available to such persons. Global Wealth Management Disclaimer

You receive this document in your capacity as a client of UBS Global Wealth Management. This publication has been distributed to you by UBS Switzerland AG (regulated by FINMA in Switzerland) or its affiliates (**"UBS"**) with whom you have a banking relationship with. The full name of the distributing affiliate and its competent authority can be found in the country-specific disclaimer at the end of this document. UBS may utilise artificial intelligence tools ("AI Tools") in the preparation of this document. Notwithstanding any such use of AI Tools, this document has undergone human review.

The date and time of the first dissemination of this publication is the same as the date and time of its publication.

Risk information:

You agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research, and that you shall not extract data from any research or estimates, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is **for your information only**; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may

adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes: (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and UBS Global Research) and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/research-methodology.

Research will initiate, update and cease coverage solely at the discretion of research management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or sustainable investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio incorporating ESG factors or sustainable investing considerations may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Disclosures: If you require detailed information on disclosures of interest or conflict of interest as required by Market Abuse Regulation please contact the mailbox MAR_disclosure_twopager@ubs.com. Please note that e-mail communication is unsecured.

External Asset Managers / External Financial Consultants: In case this research or publication is provided to an External Asset Manager or an External Financial Consultant, UBS expressly prohibits that it is redistributed by the External Asset Manager or the External Financial Consultant and is made available to their clients and/or third parties.

Argentina: All securities that will be offered to you by UBS are not authorized by the Argentine Securities and Exchange Commission (CNV) and are not subject to its reporting, periodic information requirements, or oversight. Furthermore, the CNV has not reviewed or endorsed the information provided in any securities offering document, nor the accuracy of any accounting, financial, economic data, or any other information disclosed therein, which remains the sole responsibility of the respective issuer and the other parties involved. **Australia:** This document is provided by UBS Switzerland AG. UBS Switzerland AG does not hold an Australian Financial Services Licence (AFSL) and relies on an exemption to provide financial services to persons in Australia. This document is intended only for distribution to wholesale clients under the Corporations Act 2001 (Cth). UBS Switzerland AG is a related body corporate of UBS AG, Australia Branch and UBS Securities Australia Limited. This document may be distributed to clients by those entities, but it is provided by UBS Switzerland AG and is not provided under any of the other entities' AFSL. The information in this document is general in nature and is not intended to address the objectives, financial situation or needs of any particular individual or entity. Each recipient should consider their own objectives, financial situation or needs before acting on the advice and obtain the relevant Product Disclosure Statement (if required) before making any decision whether to acquire any product. In Australia, UBS entities, other than UBS AG, Australia Branch, are not authorized deposit-taking institutions for the purposes of the Banking Act 1959 (Cth.) and their obligations do not represent deposits or other liabilities of UBS AG, Australia Branch. UBS AG, Australia Branch does not guarantee or otherwise provide assurance in respect of the obligations of such UBS entities or the funds. An investor is exposed to investment risk including possible delays in repayment and loss of income and principal invested, as relevant. If you do not wish to receive marketing materials from UBS, please contact your UBS representative or the contact details listed in the Australia Privacy Notice: https://www.ubs.com/global/en/legal/privacy.html. Your personal data will be processed in accordance with this notice. **Bahrain**: This report is being distributed by UBS AG, Bahrain Branch, duly licensed and regulated by the Central Bank of Bahrain (CBB) as an Investment Business Firm - Category 2 (Branch). Related financial services or products are only made available to Accredited Investors, as defined by the CBB, and are not intended for any other persons. UBS AG, Bahrain Branch is

a Foreign Branch of UBS AG, Zurich/Switzerland and is located on Level 21, East Tower, Bahrain World Trade Centre, Manama, Kingdom of Bahrain. **Brazil**: This report is distributed in Brazil by UBS BB Corretora de Câmbio, Títulos e Valores Mobiliários S.A. or its affiliates ("UBS"). Pursuant to CVM Resolution No. 20/2021, of February 25, 2021, the author(s) of the report hereby certify(ies) that the views expressed in this report solely and exclusively reflect their personal opinions and have been prepared independently, including with respect to UBS. Part of the author(s)'s compensation is based on various factors, including the total revenues of the relevant UBS Group entity of which they are in employment of, but no part of the compensation has been, is, or will be related to the specific recommendations or views expressed in this report. In addition, UBS declares that: UBS has provided, and/or may in the future provide investment banking, brokerage, asset management, commercial banking and other financial services to the subject company/companies or its affiliates, for which they have received or may receive customary fees and commissions, and which constituted or may constitute relevant financial or commercial interests in relation to the subject company/companies or the subject securities. **Canada**: The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. Under no circumstances is the information contained herein to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada or, alternatively, pursuant to a dealer registration exemption. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed upon these materials, the information contained herein or the merits of the securities described herein and any representation to the contrary is an offence. In Canada, this publication is distributed by UBS Investment Management Canada Inc. **China**: This report and any offering material such as term sheet, research report, other product or service documentation or any other information (the "Material") sent with this report was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the material erroneously, UBS asks that you kindly delete it and inform UBS immediately. This report is prepared by UBS Switzerland AG or its offshore subsidiary or affiliate (collectively as "UBS Offshore"). UBS Offshore is an entity incorporated out of China and is not licensed, supervised or regulated in China to carry out banking or securities business. The recipient should not contact the analysts or UBS Offshore which produced this report for advice as they are not licensed to provide securities investment advice in China. UBS Investment Bank (including Research) has its own wholly independent research and views which at times may vary from the views of UBS Global Wealth Management. The recipient should not use this document or otherwise rely on any of the information contained in this report in making investment decisions and UBS takes no responsibility in this regard. **Denmark**: This publication is not intended to constitute a public offer under Danish law. It is distributed only for information purposes to clients of UBS Europe SE, Denmark Branch, filial af UBS Europe SE, with place of business at Sankt Annae Plads 13, 1250 Copenhagen, Denmark, registered with the Danish Commerce and Companies Agency, under No. 38 17 24 33. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed without the consent of UBS. None of the Material has been registered or filed under the prevailing laws and with any financial or regulatory authority in your jurisdiction. The Material may not have been approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including futures contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Israel**: UBS is a premier global financial firm offering wealth management, asset management and investment banking services from its headquarters in Switzerland and its operations in over 50 countries worldwide to individual, corporate and institutional investors. This publication is intended for information only and is not intended as an offer to buy or solicitation of an offer. Furthermore, this publication is not intended as an investment advice. Nothing contrary to the above, no action has been, or will be, taken in Israel that would permit an offering of the product(s) mentioned in this document or a distribution of this document to the public in Israel. In particular, this document has not been reviewed or approved by the Israeli Securities Authority. The product(s) mentioned in this document is/are being offered to a limited number of sophisticated investors who qualify as one of the investors listed in the first supplement to the Israeli Securities Law, 5728-1968. This document may not be reproduced or used for any other purpose, nor be furnished to any other person other than those to whom copies have been sent. Anyone who purchases the product(s) mentioned herein shall do so for its own benefit and for its own account and not with the aim or intention of distributing or offering the product(s) to other parties. Anyone who purchases the product(s) shall do so in accordance with its own understanding and discretion and after it has received any relevant financial, legal, business, tax or other advice or opinion required by it in connection with such purchase(s). The word "advice" and/or any of its equivalent terms shall be read and construed in conjunction with the definition of the term "investment marketing" as defined under the Israeli Regulation of Investment Advice, Investment Marketing and Portfolio Management Law. The Swiss laws and regulations require a number of mandatory disclosures to be made in independent financial research reports or recommendations. Pursuant to the Swiss Financial Market Infrastructure Act and the Financial Market Infrastructure Ordinance-FINMA, banks must disclose the percentage of voting rights they hold in companies being researched, if these holdings are equal to or exceed the statutory thresholds. In addition, the Directives on the Independence of Financial Research, issued by the Swiss Bankers Association, mandate a number of disclosures, including the disclosure of potential conflicts of interest, the participation within previous 12 months in any securities issues on behalf of the company being researched, as well as the fact that remuneration paid to the financial analysts is based generally upon the performance of (i) the new issues department or investment banking; or (ii) securities trading performance (including proprietary trading) or sales. **Italy**: This publication is not intended to constitute a public offer under Italian law. It is distributed only for information purposes to clients of UBS Europe SE, Succursale Italia, with place of business at Via del Vecchio Politecnico, 3-20121 Milano. UBS Europe SE, Succursale Italia is subject to the joint supervision of the European Central Bank, the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, "BaFin"), as well as of the Bank of Italy (Banca d'Italia) and the Italian Financial Markets Supervisory Authority (CONSOB - Commissione Nazionale per le Società e la Borsa), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by BaFin. **Japan**: This report is solely distributed in Japan by UBS SuMi TRUST Wealth Management Co., Ltd, Financial Instruments Dealer, Director-General of Kanto Local Finance Bureau (Kinsho) No. 3233, a member of the Japan Securities Dealers Association, Financial Futures Association of Japan, Investment Management Association of Japan. It is distributed only for information purposes to clients of UBS Europe SE, Luxembourg Branch ("UBS Luxembourg"), R.C.S. Luxembourg n° B209123, with registered office at 33A, Avenue J. F. Kennedy, L-1855 Luxembourg. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea (HRB n° 107046), with registered office at Bockenheimer Landstrasse 2-4, D-60306 Frankfurt am Main, Germany, duly authorized by the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, "BaFin") and subject to the joint prudential supervision of BaFin, the European Central Bank and the central bank of Germany (Deutsche Bundesbank). UBS Luxembourg is furthermore supervised by the Luxembourg prudential supervisory authority (Commission de Surveillance du Secteur Financier), in its role as host member state authority. This publication has not been submitted for approval to any public supervisory authority. **Malaysia**: This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Mexico**: This information is distributed by UBS Asesores México, S.A. de C.V. ("UBS Asesores"), an affiliate of UBS Switzerland AG, incorporated as a non-independent investment advisor under the Mexican regulation due to the relation with a Foreign Bank. UBS Asesores is registered under number 30060-001-(14115)-21/06/2016 and subject to the supervision of the Mexican Banking and Securities Commission ("CNBV") exclusively regarding the rendering of (i) portfolio management services, (ii) securities investment advisory services, analysis and issuance of individual investment recommendations, and (iii) anti-money laundering and terrorism financing matters. This UBS publication or any material related thereto is addressed only to Sophisticated or Institutional Investors located in Mexico. Research reports only reflect the views of the analysts responsible for the report. The compensation of the analyst(s) who prepared this report is determined exclusively by research management and senior management of any entity of UBS Group to which such analyst(s) render(s) services. **Monaco**: This document is not intended to constitute a public offering or a comparable solicitation under the Principality of Monaco laws, but might be made available for information purposes to clients of UBS (Monaco) S.A., a regulated bank having its registered office at 2 avenue de Grande Bretagne 98000 Monaco operating under a banking license granted by the "Autorité de Contrôle Prudentiel et de Résolution" (ACPR) and the Monegasque government which authorizes the provision of banking services in Monaco. UBS (Monaco) S.A. is also licensed by the "Commission de Contrôle des Activités Financières" (CCAF) to provide investment services in Monaco. The latter has not approved this publication. **Philippines:** This communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Portugal**: UBS Switzerland AG is not licensed to conduct banking and financial activities in Portugal nor is UBS Switzerland AG supervised by the portuguese regulators (Bank of Portugal "Banco de Portugal" and Portuguese Securities Exchange Commission "Comissão do Mercado de Valores Mobiliários"). **Qatar**: UBS Qatar LLC is licensed by the Qatar Financial Centre Authority and authorized by the QFC Regulatory Authority, with QFC no. 01169, and has its registered office at Building No. 36, 4th Floor, Abdulla Bin Thani Street, Doha Design District 1, Msheireb Downtown Doha, State of Qatar. This material is strictly intended for Eligible Counterparties and/or Business Customers only as classified under the QFCRA's Customer and Investor Protection Rules 2019. No other person should act upon this material. **Russia**: This document or information contained therein is for information purposes only and constitutes neither a public nor a private offering, is not an invitation to make offers, to sell, exchange or otherwise transfer any financial instruments in the Russian Federation to or for the benefit of any Russian person or entity and does not constitute an advertisement or offering of securities in the Russian Federation within the meaning of Russian securities laws. The information contained herein is not an "individual investment recommendation" as defined in Federal Law of 22 April 1996 No 39-FZ "On Securities Market" (as amended) and the financial instruments and operations specified herein may not be suitable for your investment profile or your investment goals or expectations. The determination of whether or not such financial instruments and operations are in your interests or are suitable for your investment goals, investment horizon or the acceptable risk level is your responsibility. We assume no liability for any losses connected with making any such operations or investing into any such financial instruments and we do not recommend to use such information as the only source of information for making an investment decision. **Saudi Arabia**: This material is for marketing and information purposes by UBS Saudi Arabia only. It has been distributed by UBS Saudi Arabia or reviewed and approved by UBS Saudi Arabia if it was issued by UBS Switzerland AG, by UBS AG, or any of its subsidiaries or branches. UBS Switzerland AG is a public company limited by shares, incorporated in Switzerland with its registered offices at Bahnhofstrasse 45, CH-8001 Zurich. UBS Saudi Arabia (a subsidiary of UBS AG) is a Saudi closed joint stock company incorporated in the Kingdom of Saudi Arabia with a paid capital of 110,000,000 Saudi Riyals under commercial register number 1010257812 having its registered office at Laysen Valley, P.O. Box 75724, Riyadh 11588, Kingdom of Saudi Arabia. UBS Saudi Arabia is authorized and regulated by the Capital Market Authority to conduct securities business under license number 08113-37. This document is distributed only under such circumstances as may be permitted by applicable laws and regulations. The information and – if any - opinions contained in this document have been compiled or arrived at based upon information obtained from sources believed to be reliable and in good faith, but is not guaranteed as being accurate, nor is it a complete statement or summary of the securities, markets or developments referred to in the document. All such information and opinions are subject to changes without notice. Past performance of investments (whether simulated or actual) is not necessarily an indicator of future results. Forward looking data is based on estimates that are subject to changes. Should the currency of a financial product or service not match your reference currency, performance may rise or fall due to currency fluctuations. UBS Switzerland AG and / or other members of the UBS Group may have a position in and may make a purchase and/or sale of any of the securities or other financial instruments mentioned in this document While statements that constitute "forward-looking statements", including, but not limited to, statements relating to our future business development represent UBS judgments and future expectations concerning the development of our business, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from our expectations. This document may not be forwarded, reproduced, redistributed or republished for any purpose without the written permission of UBS Saudi Arabia. Source for all data and charts (if not indicated otherwise) is UBS Switzerland AG. **Singapore**: Where applicable, this material is distributed in Singapore by UBS AG, Singapore Branch, which is licensed by the Monetary Authority of Singapore under the Banking Act 1970 to carry on banking business. UBS AG is incorporated in Switzerland with limited liability. UBS AG has a branch registered in Singapore (UEN S98FC5560C). This material has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations (the "FAR")) only. By virtue of your status as an institutional investor, accredited investor, or expert investor, UBS AG is exempted from complying with certain requirements under the Financial Advisers Act 2001 (the "FAA"), the FAR and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which UBS AG may provide to you. These include exemptions from complying with: Section 34 of the FAA (pursuant to Regulation 33(1) of the FAR); Section 36 of the FAA (pursuant to Regulation 34(1) of the FAR); and Section 45 of the FAA (pursuant to Regulation 35(1) of the FAR). Singapore recipients and clients of UBS AG, Singapore Branch should contact UBS AG, Singapore Branch for any matters arising from, or in connection with, this material. Where applicable, this communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved or endorsed by any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Spain:** This report is distributed in Spain by UBS AG, Sucursal en España, authorized under number 1460 in the Register by the Banco de España. **Sweden**: This publication is not intended to constitute a public offer under Swedish law. The Bond Yield Spectrum

By Ed Yardeni & Elias Griepentrog • 7 Oct 2026

View in browser

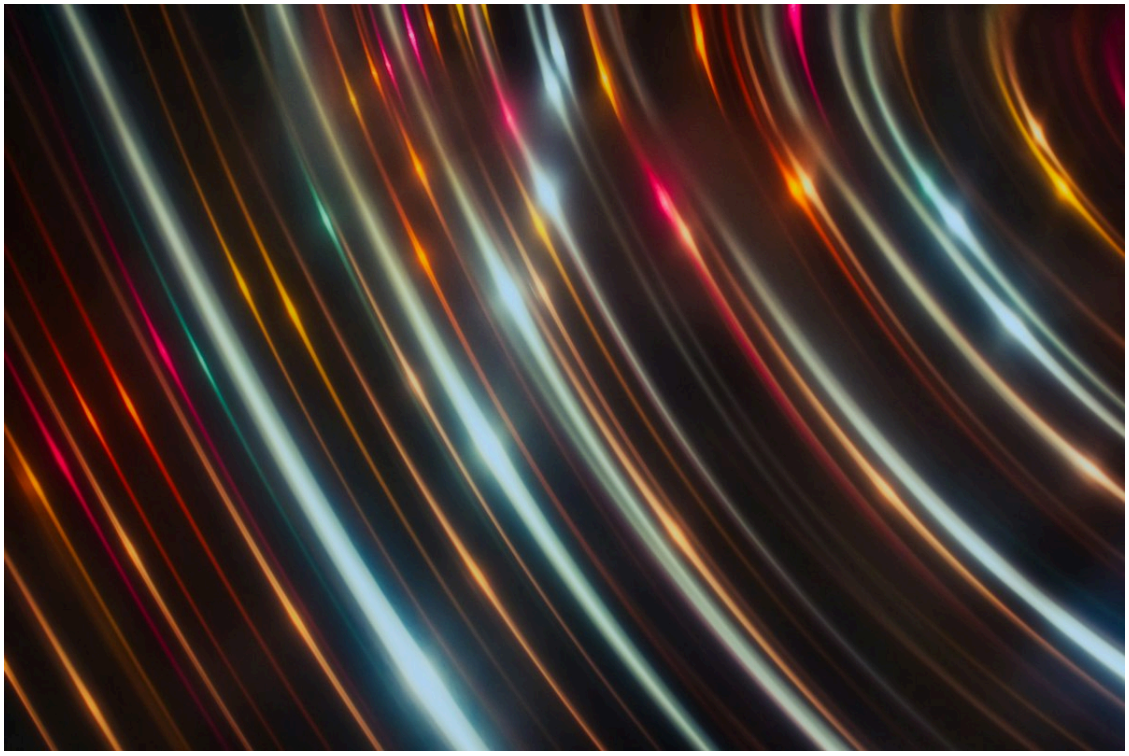

Photo by Adam Kring / Unsplash

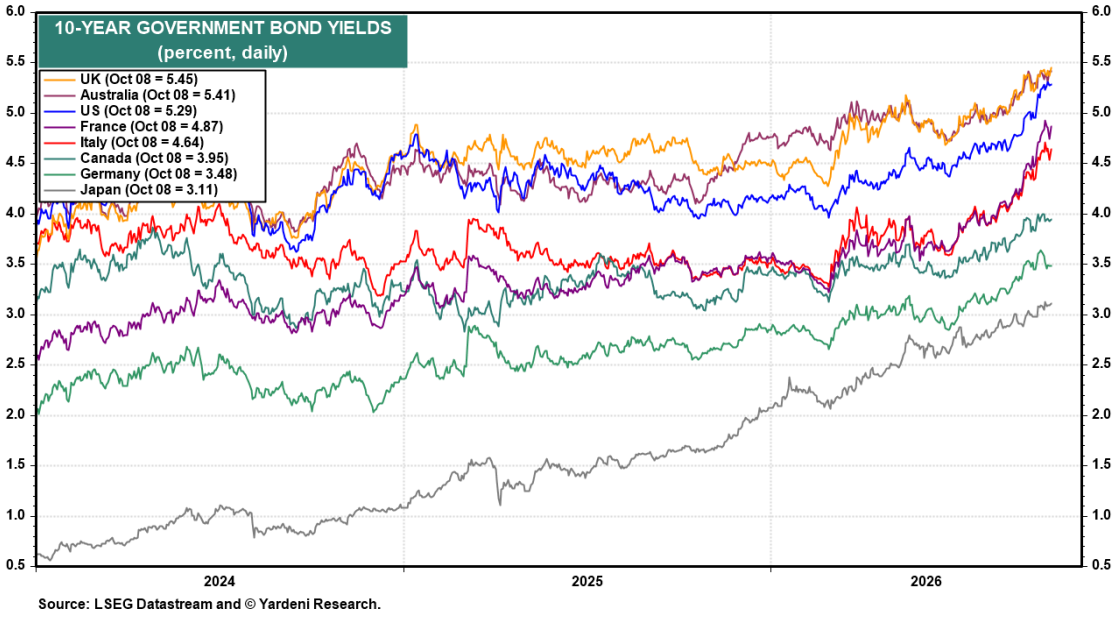
I. From The Good To The Bad To The Ugly

The spectrum of explanations for the rise in bond yields worldwide includes relatively benign ones to downright dangerous ones (chart). On the good side of the spectrum, better-than-expected economic growth has driven US bond yields up to levels that are back to normal. On the ugly side, soaring bond yields in France are signaling a looming debt crisis. In between are bad scenarios that explain the synchronized rise in global

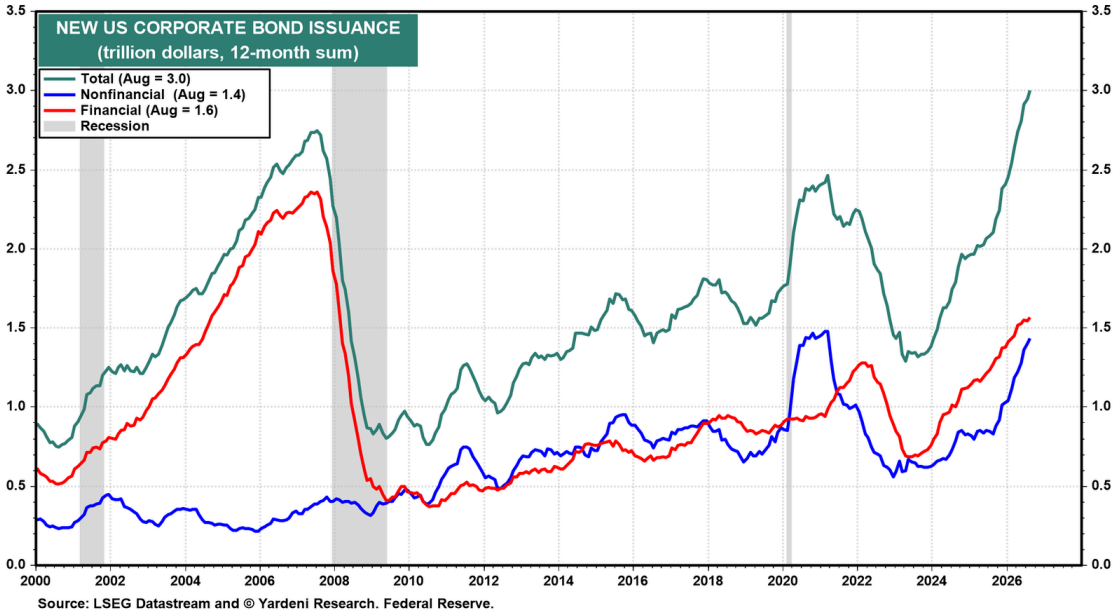
bond yields. These include the inflationary energy shock attributable to the war in the Middle East and the unwinding of the yen-carry trade.



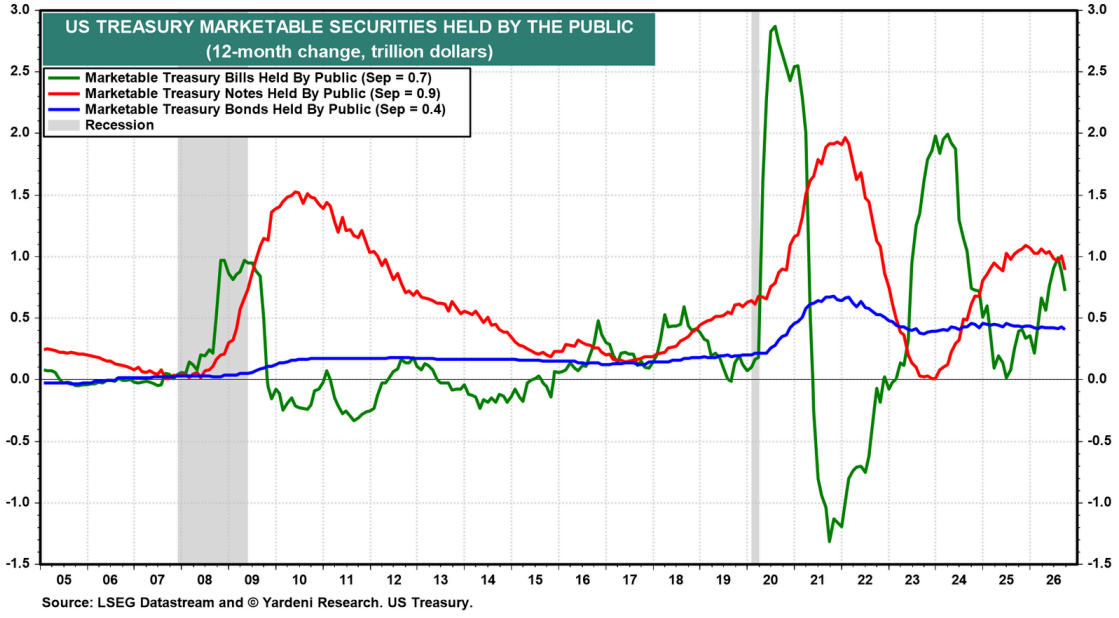
Let's have a closer look at the good, the bad, and the ugly:

(1) R-star rising. R-star, or the neutral interest rate, is the real interest rate consistent with low unemployment and price stability. It balances the supply of savings with demand for investment. Three forces are pushing it higher.

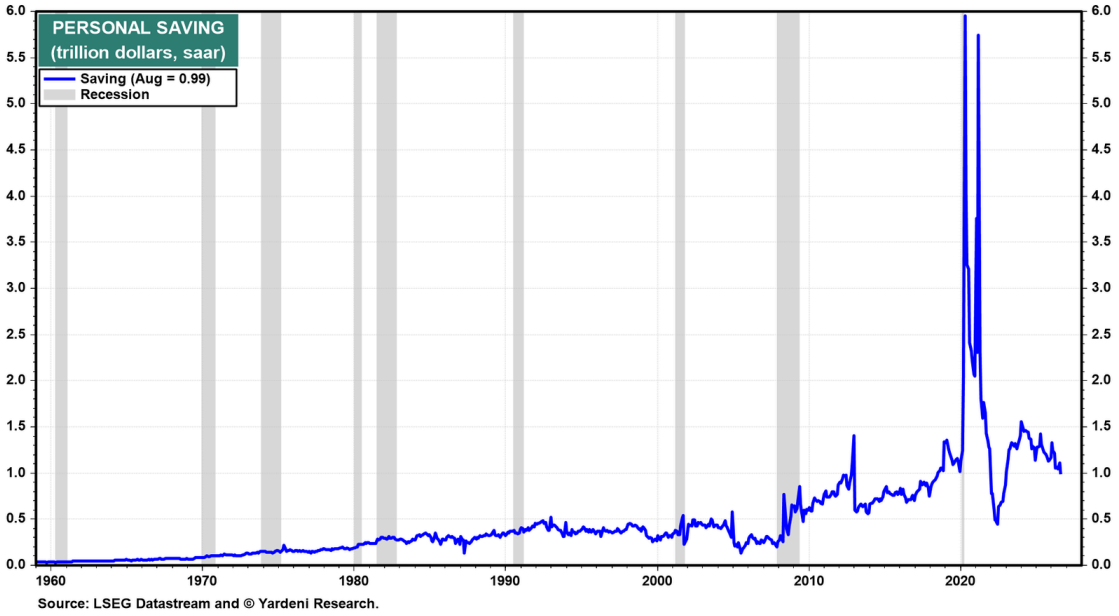
First, demand for capital is booming along with AI-related capital spending. Hyperscaler capex is expected to reach $750-$800 billion this year and $1.2 trillion next. Total US corporate bond issuance over the past 12 months through August was a record $3.0 trillion, including $1.4 trillion and $1.6 trillion issued by nonfinancial and financial corporations, respectively (chart).



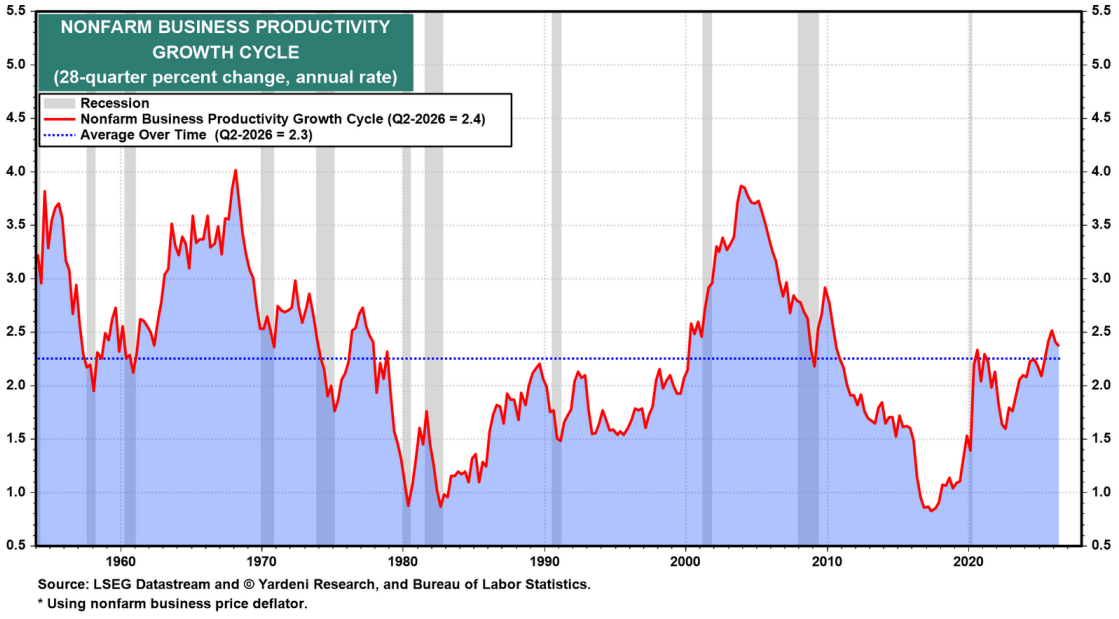
At the same time, US Treasury borrowing totaled $2.1 trillion over the past 12 months through September, including $1.3 trillion in notes and bonds (chart).



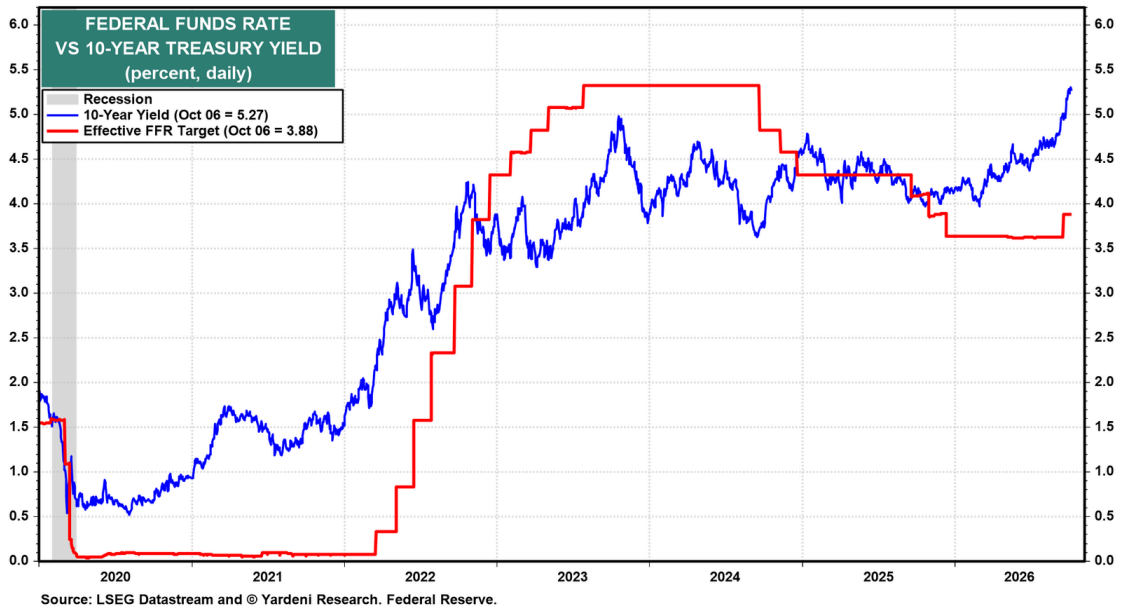
Second, national savings faces demographic headwinds as retiring Baby Boomers stop saving and draw down their net worth (chart).



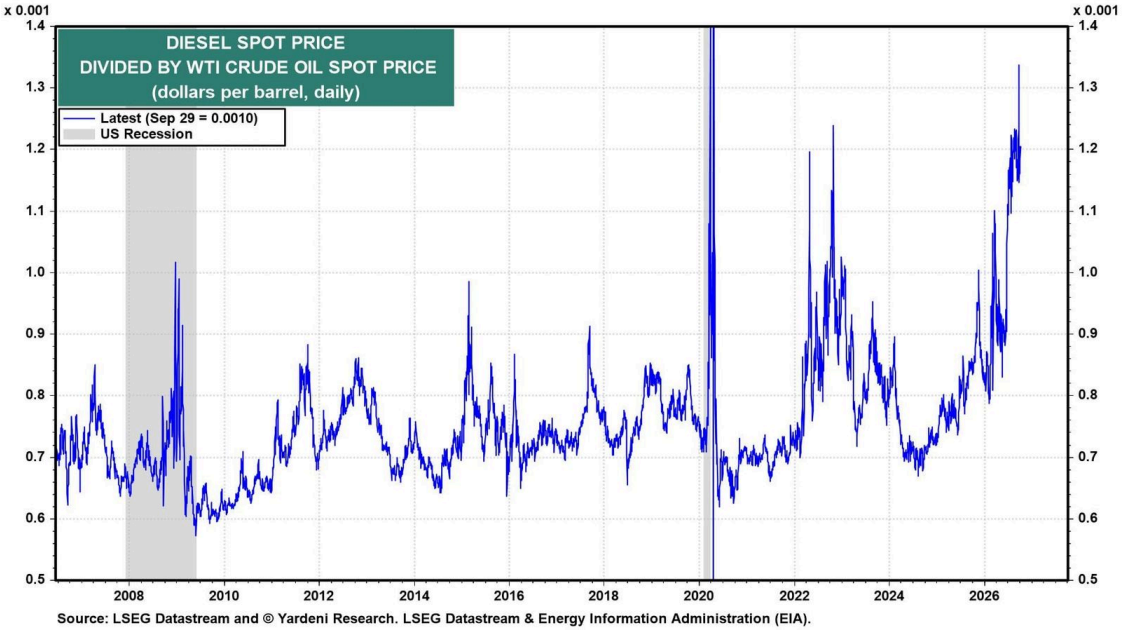
Third, stronger productivity growth may be raising the return on capital and the economy's sustainable growth rate (chart).



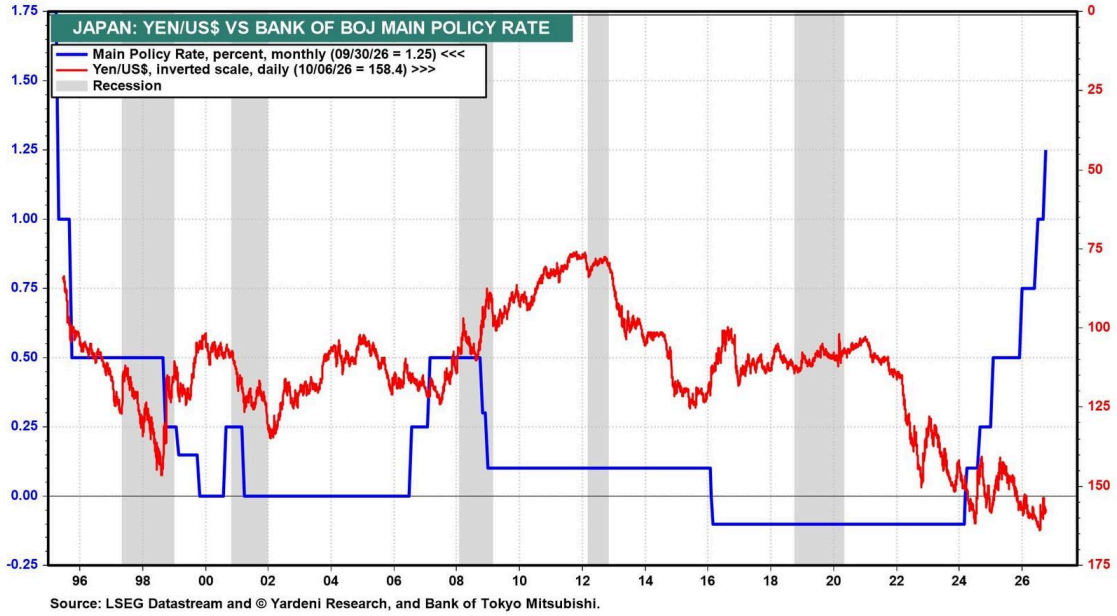
The Fed's 175bps cuts in the federal funds rate since September 2024 have been completely offset by a comparable increase in the 10-year Treasury bond yield since then. Even at the start of this year, most Fed officials believed that the FFR was modestly restrictive, i.e., that it exceeded the neutral rate. In September, they acknowledged their error by hiking the FFR by 25 basis points, as Fed Chair Kevin Warsh said they had removed a "dose of accommodation," implying that the FFR is actually below the neutral rate!



(2) Energy shock. Moving toward the middle of the spectrum are higher-for-longer oil prices. With US-Iran talks stalled and the US increasing its military assets, the risk of renewed escalation remains high. The longer energy costs stay elevated, the greater the risk they'll boost core inflation, forcing a more aggressive Fed response. If crude oil prices fall because more oil is getting through the Strait of Hormuz, diesel prices might remain elevated (chart).

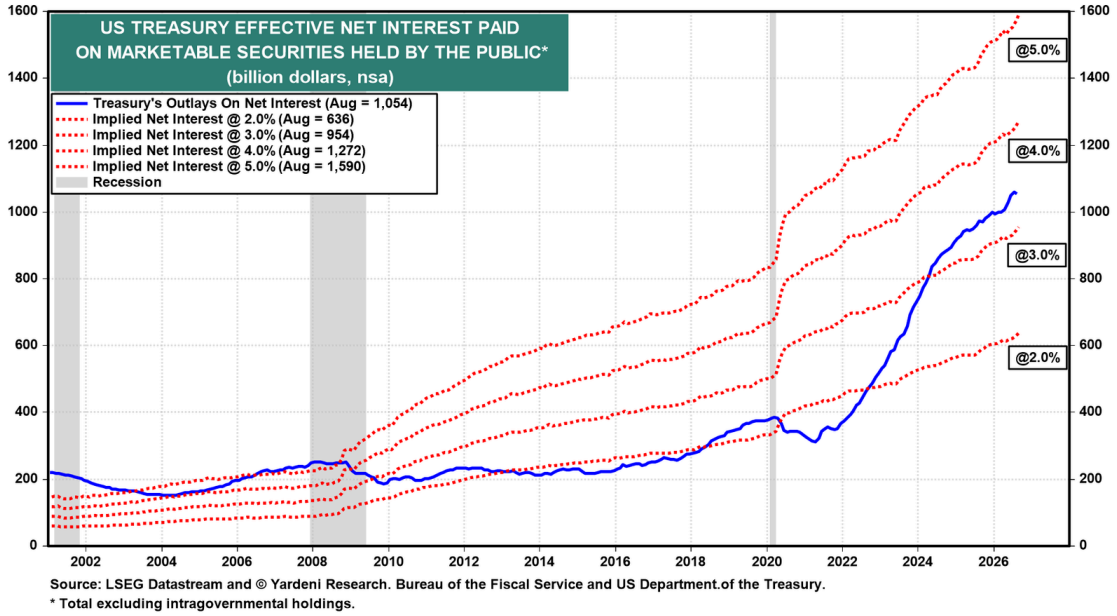


(3) Unwinding yen-carry trade. The yen-carry trade was based on ultra-low Japanese interest rates and a stable or weak yen. Now the BOJ is raising interest rates and the yen may be bottoming (charts). This is forcing traders to liquidate bond holdings previously financed with cheap Japanese money.

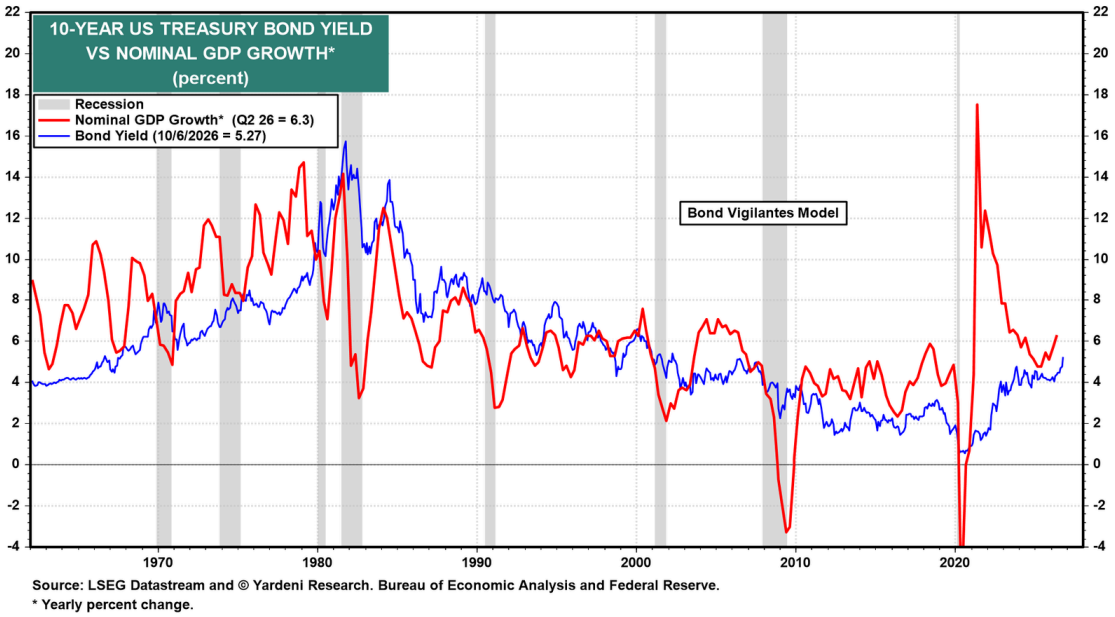


(4) Debt crisis. At the far end of the spectrum is the "Revenge of the Bond Vigilantes." Between the Great Financial Crisis and the Great Virus Crisis, major central banks' ultra-easy policies enabled governments to run large deficits. The Bond Vigilantes were powerless. But now they are more powerful than ever because government debt is at record highs. Central banks have been forced to raise their policy rates as inflation has been more troublesome in recent years. Bond yields have soared this year worldwide as inflation rebounded and fiscal-risk premiums have risen.

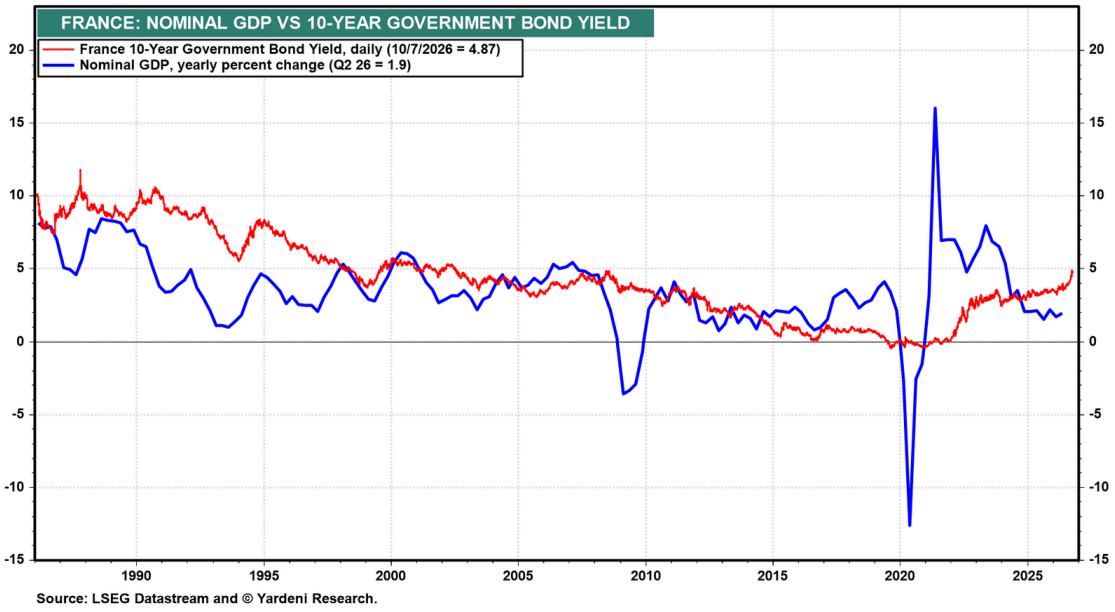
The danger is a self-reinforcing debt spiral: Higher yields raise interest costs, widen deficits, require more borrowing, and push yields higher still (chart). And, of course, higher yields increase the risk of causing a recession, which would exacerbate any debt crisis.



In our view, the US should remain in the higher R-star end of the spectrum. We would start to worry about the debt-crisis danger zone if the US bond yield rises above nominal GDP growth (chart).



In France, on the other hand, the Bond Vigilantes are pushing the 10-year government bond yield well above nominal GDP growth (chart). The French could be toast if yields continue to soar.



II. The Fed Minutes

The latest Fed minutes paint a familiar picture: a resilient economy, a firm labor market, and inflation that remains too high. We drew three key takeaways from the minutes of the Fed's September 15-16 meeting.

(1) Restrictiveness. Several participants said the current policy rate was not restrictive or only mildly restrictive, while a couple explicitly raised their estimates of the neutral federal funds rate. That fits neatly with our R-star story.

(2) Macro backdrop. The Fed saw a resilient economy: real GDP is expanding at a solid pace, consumer spending has firmed, AI investment remains robust, and the labor market is close to maximum employment. At the same time, inflation remains elevated and risks were still skewed to the upside.

(3) Rate outlook. All participants backed September's 25bps hike, and most judged that another increase would likely be appropriate by year-end.

AWS 調漲 EC2 預留算力價格 15%：鎖定 80 億美元輝達晶片交易，公有雲定價權全面重構

ANDREW LU ON GLOBAL SEMI/TECHS
OCT 7 • PAID

READ IN APP

Executive summary

即使最近我們觀察到部分AI伺服器產業鏈下游如ODM組裝廣達，滑軌川湖，散熱系統雙鴻，及均熱片健策，9月份訂單有明顯調整，3Q26營收小幅不如市場預期，可能因為短期電力短缺及短料缺貨卡長料庫存調整，但AI數據算力中心基礎建設的價格調整似乎還未停歇，先是有 Nebius 於10/1日起全面調漲 AI GPU 租用價格達 17-21%，CPU 達25%，Memory 達41%（請參考之前報告：17-21% On-demand AI GPU pricing hike to shift value from LLM companies to cloud vendors），現在又有 AWS 於10/7日起調漲 EC2 容量區塊牌價達15%，但使用客戶大語言模型公司 OpenAI, Anthropic 卻持續降模型每百萬 Tokens 價格衝市佔，***我們重申在電力短缺及短料缺貨卡長料庫存造成既有算力稀缺的同時，短期市場價值將從賣 tokens 的大語言/專家語言模型公司轉到 AI 數據中心算力基礎建設公司***。

What's new?

過去 24 小時內，亞馬遜雲端運算服務（AWS）官方更新了其 EC2 算力目錄，正式自 2026 年 10 月 7 日起上調指定高階 GPU 預留容量區塊（EC2 Capacity Blocks）牌價，實質調漲幅度高達約 15%。這項定價調整與亞馬遜正在推進的 80 億美元輝達 GPU 專項結構化融資案同步浮出水面。在此之前，專用雲龍頭 CoreWeave 與 Nebius 甫於 10 月 1 日將 H100 及 B200 現貨時租價格調漲 17% 至 21%。AWS 此次調價確認了公有雲龍頭不再打價格戰，而是全面跟進調價，彰顯出在企業長週期 Agent 與前線訓練負載湧入下，頂級算力供給依舊供不應求。

付費訂閱戶可分享誰有利，誰受影響，Outside the box 想法，建議，什麼是EC2 capacity blocks

Subscribed

Positively affect what supply chain vendors and why?

- **超大規模公有雲巨頭：**亞馬遜（Amazon AWS）、微軟（Microsoft Azure）、Alphabet（Google Cloud）。
- **Neocloud 外溢雲運營商：**CoreWeave（CRWV）、Nebius（NBIS），Oracle, SpaceX/SI。
- **企業級 GPU 雲端資源優化軟體：**Cast AI、Run:ai。
- **原因分析：**預留算力價格上調 15% 將直接提振 AWS 雲端運算業務的平均單元營收（ARPU）與營運利潤率，消除了市場對雲巨頭巨額 Capex 侵蝕自由現金流的擔憂；同時專用雲的提價策略獲得 Hyperscaler 背書，支撐了整體行業的毛利擴張，我們相信其他公司也會陸續跟進。

Negatively affect what supply chain vendors and why?

- **預算受限的中小型 AI 開發者與微調新創。**
- **尚未鎖定長期預留合約的二線軟體公司。**
- **原因分析：**算力租金成本上揚 15% 將直接壓縮非頭部 AI 應用公司的現金跑道（Runway），迫使缺乏強勁變現能力的新創加速整合或退出市場。

Our outside the box non-consensus thinking

市場直覺認為雲端巨頭提價可能引發客戶流失或轉向自建資料中心。然而我們的非共識洞察是 AWS 此次提價並非單純的成本轉嫁，而是算力期貨化與優質客戶篩選機制優化。在 EC2 Capacity Blocks 機制下，客戶鎖定的是「未來特定時段確保可用的確定性算力」。在全美資料中心正面臨超過 100 項地方性建置禁令（Moratoriums）與電網審批塞車的背景下，「即時可用的電力與算力」成為絕對稀缺品。AWS 藉由調價 15%，有效過濾了投機性短期負載，將關鍵算力優先供給具備長期訂閱付費能力的高價值企業客戶（如生成式醫療、高頻金融與國防客戶），從而鎖定長達 3 至 5 年的現金流可預測性。

Our advises and risks analysis

- **超配雲端巨頭母公司股權：**AWS 提價確認了強大的定價權，亞馬遜（AMZN）預計將在2027-2028展現高於預期的利潤率修復。
- **持有 GPU 虛擬化與排程優化軟體股：**隨著時租成本攀升，企業將加大採購動態排程與工作負載優化軟體，推升相關供應商營收。
- **客戶架構優化導致 Token 效率提升：**推論優化演算法可能減少總 GPU 租賃時長，這對雲巨頭是漲價後可能發生的風險。
- **總體經濟逆風壓抑 IT 支出：**若企業削減 2027 年 IT 資本預算，可能影響高價預留容量的續約率。

附註：EC2 及EC2 capacity blocks 是什麼?

Amazon EC2（Elastic Compute Cloud）是亞馬遜雲端運算服務（AWS）最核心的 IaaS（基礎設施即服務）產品，簡單說就是「在雲端租用的虛擬伺服器」。企業與開發者不再需要自行採購、架設或維護實體機房與伺服器硬

體，只要透過網路，幾分鐘內就能按需開啟或關閉任意運算規格的主機，並依實際使用時間計費。

一、 EC2 的核心概念與結構

1. **實例（Instances）**：
    - EC2 中的虛擬機器統稱為「實例」。
    - AWS 依據不同的工作負載，將實例分成不同家族，例如：
        - **通用型（M 系列、T 系列）**：平衡 CPU、記憶體與網路，常用於一般網站、後端 API。
        - **運算優化型（C 系列）**：高單核效能，適用於批次處理、分散式分析。
        - **記憶體優化型（R 系列、X 系列）**：配備海量 RAM，用於記憶體資料庫（Redis/SAP HANA）。
        - **加速運算型（P 系列、G 系列、Trn 系列）**：搭載 NVIDIA 高階 GPU（如 H100、B200、B300 等）或 AWS 自研晶片（Trainium/Inferentia），專門用於 AI 大模型訓練與推論。
2. **彈性（Elastic）**：
    - 資源可以**水平擴展（Auto Scaling）或垂直升降級**。例如電商遇到購物節流量爆發，系統可自動從 5 台擴增至 50 台，活動結束後自動銷毀，避免資源閒置浪費。

二、 常見的計費與購買模式

傳統上，EC2 的採購模式主要分為：

- **隨需（On-Demand）**：隨開隨用、隨關隨停，按秒/小時收費，價格最高但彈性最大。
- **節約計畫 / 預留（Savings Plans / Reserved Instances）**：承諾使用 1 年或 3 年，換取高達 40%–70% 的折扣。
- **競價實例（Spot Instances）**：利用 AWS 當下閒置的閒置運算容量，折扣極高，但隨時可能被 AWS 回收中斷。

三、 什麼是「EC2 Capacity Blocks」？

在 AI 浪潮爆發後，高階 GPU 供不應求。許多 AI 新創或研究團隊買不起 1~3 年的長約（Reserved），但用隨需（On-Demand）又常因機房沒卡而啟動失敗，用 Spot 則可能在模型訓練到一半時被踢掉。

因此 AWS 推出了 **EC2 Capacity Blocks for ML（機器學習容量區塊）**：

- **運作機制**：允許客戶提前預約未來某個特定日期、特定時段（最長可預約數週前，租期由 1 天至數十天不等）的頂級 GPU 算力叢集（如 P5、P6

等高階實例)。

- **保證取得**：在預約的時間區間內，AWS 保證提供 100% 確定可用的 GPU 叢集與高速低延遲網路（EFA)。
- **調價意涵**：AWS 上調 Capacity Blocks 牌價（特別是針對 B200/B300 等次世代 Blackwell 架構機型)，反映出市場對超高階 AI 訓練與推論算力的強烈需求與稀缺性，雲端巨頭也藉此反映其龐大的硬體採購、先進封裝及水冷機房建置成本。

Solid growth ahead with robust capacity expansions

We initiate coverage of AI/HPC test socket leader WinWay with a Buy rating and NT $8,900 price target. WinWay's share price has corrected 43% from its April 2026 peak due to broader market de-rating and margin pressure associated with its Technoprobe partnership and capacity expansion. We believe the recent correction presents an opportunity to re-engage with WinWay's long-term growth trajectory, supported by three key drivers: 1) increasing content from AI GPUs, CPUs, and TPUs, 2) substantial capacity expansion, and 3) broader adoption of system-level testing (SLT). Together, these drivers should support revenue growth of 105%/74%/71% in 2026E/27E/28E. Importantly, WinWay's growth is increasingly being driven by higher socket content per device rather than semiconductor unit growth alone and the stock currently trades at 16x of our 2028E P/E vs historical average of 30x, potential to re-rate with GM recovery in the coming quarters. See our companion testing deep dive sector note.

Rising yields and utilisation to offset probe card dilution

Gross margin declined to 38.3% in Q226 from 45.3% in FY25, pressured by outsourced MEMS probes and expansion-related costs. While probe-card margins are unlikely to return to H125 levels of 48.9% given the Technoprobe partnership structure, we expect margin pressure to ease as utilization and yields improve, supporting GM recovery to 43.1% in 2027E and 44.7% in 2028E.

CPU and TPU as fundamental growth drivers

Beyond its core GPU socket franchise, WinWay is well positioned to benefit from the expansion of AI-oriented CPU and TPU platforms. We expect the company to supply sockets for AMD's Venice CPU, Nvidia's Vera CPU, and Google's TPU v8t and v9, and also Vera CPU probe cards, providing an additional growth engine beyond GPUs. WinWay is well positioned in this segment due to its historical collaboration with end customers and its proximity to the local Taiwanese test supply chain. We view AI CPUs and TPUs as an increasingly important contributor to test interface demand as compute architectures diversify in the agentic AI era, driving WinWay's socket and probe card sales growth of 132%/75%/69% and 94%/72%/78% in 2026E/27E/28E, respectively. We estimate CPU/TPU to contribute around 30%/20% of WinWay's 2027E sales.

Valuation: Initiate with a Buy rating, with price target of NT$8,900

We forecast EPS of NT$101.8 in 2026E, rising to NT$201.4/393.0 in 2027E/28E. Our NT $8,900 price target is based on 30x average 2027E-28E P/E, in line with the company's historical average. We believe this valuation is supported by WinWay's exposure to structural growth in AI/HPC testing, expanding socket content, and our long-term earnings CAGR estimate of 30%. We initiate with a Buy rating.

Highlights (NT$m)	12/23	12/24	12/25	12/26E	12/27E	12/28E	12/29E	12/30E

UBS Research THESIS MAP a guide to our thinking and what´s where in this report

PIVOTAL QUESTIONS

Q: Will capacity constraints limit WinWay's growth in the next two to three years?
Near term, yes. Beyond 2026E, no. WinWay's current capacity remains constrained, but ongoing expansions should significantly increase output over the next two years. With new capacity coming online and the company shifting toward higher-value AI/HPC applications, including CPU probe cards, >10k-pin coaxial sockets and next-generation HyperSockets, we forecast revenue growth of 105%/74%/71% in 2026E/27E/28E, supported by capacity additions, rising AI/HPC content and expanding socket demand. We also expect operating leverage to improve as capacity scales and utilization increases, with OPM rising from 27.5% in 2026E to 32.1%/36.7% in 2027E/28E.

Q: Will WinWay's GM recover from Q226's 38.3%?
Yes. We view recent margin pressure as largely temporary. GM has been impacted by MEMS probe sourcing through Technoprobe and start-up costs associated with capacity expansion. Although margin dilution from probe card business is unlikely to unravel due to the MEMS partnership terms with Technoprobe, as new facilities ramp and yields improve, we expect profitability to recover gradually from the Q226 trough, with gross margin improving to 43.1% in 2027E and 44.7% in 2028E.

UBSVIEW

We initiate coverage of WinWay with a Buy rating and NT$8,900 price target. We believe the market is overly focused on near-term margin pressure and underappreciating WinWay's long-term growth outlook. Key drivers include 1) expanding content from AI GPUs, CPUs, and TPUs, 2) substantial capacity expansion, and 3) growing adoption of system-level testing (SLT). Together, these drivers should support revenue growth of 105%/74%/71% in 2026E/27E/28E.

EVIDENCE

TSMC and OSATs have been expanding their CoWoS capacities aggressively, from 40kwpm in 2024 to around 90 kwpm in 2025, and is tracking to expand CoWoS capacity toward 160kwpm in 2026E. TSMC also ramped up expanding N3/N2 capacity, with multiple product launches from customers' pipelines—Nvidia's Rubin, AMD's MI400 series/Venice CPU and other cloud ASICs—translating into foreseeable, strong testing demand as the majority are WinWay's customers. AI accelerator test times have increased meaningfully for new platforms. We expect continued front-end and advanced packaging investments to drive higher testing intensity and support long-term demand for advanced sockets and test interfaces.

WHAT´S PRICED IN?

WinWay's share price has corrected 43% from its April 2026 peak and currently trades at 16x of our 2028E P/E vs historical average of 30x. Our reverse DCF analysis indicates that the current market price implies only a 19% long-term sales CAGR vs our estimate of 25%, alongside long-term GM level of 32% vs our estimate of 45%. We see scope for re-rating.

UPSIDE/DOWNSIDE SPECTRUM

Value drivers (2027/28E)	Test socket sales growth	Probe card sales growth	GM %
NT$10,000 upside	90%/87%	87%/93%	45.1%/49.7%
NT$8,900 base	75%/69%	72%/78%	43.1%/44.7%
NT$4,000 downside	35%/34%	32%/38%	38.1%/39.7%

Source: UBS estimates

COMPANY DESCRIPTION

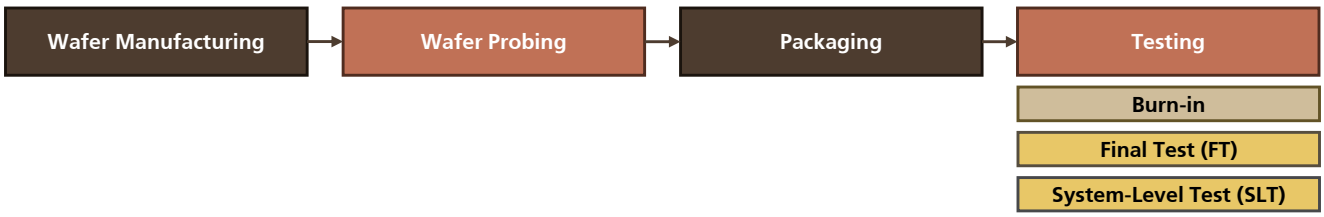
WinWay was founded in 2001 in Kaoshiung, Taiwan. It is a semiconductor testing interface solutions provider, with final test socket as its main business segment. The company has high-end solutions for AI/HPC testing, providing final test/system-level test and burn-in test sockets and probe cards through its own made probes and partnership with Technoprobe.

Testing TAM expanding with IC complexity: leaders likely to outperform industry growth

Our central view is that testing content per AI accelerator is growing faster than semiconductor unit volumes, creating a multi-year expansion in testing TAM. We believe semiconductor testing is entering a period of structural growth as AI-driven chip complexity increases testing intensity across wafer, package and system levels. The industry's shift-left strategy, which moves more testing upstream in the semiconductor manufacturing process, is resulting in longer and more frequent test insertions. As cloud AI GPUs and ASICs become increasingly complex, additional testing is required to ensure functionality, performance and yield, while reducing defective parts per million (DPPM). More robust testing should improve deployment efficiency and lower the cost of operating AI infrastructure.

Semiconductor testing generally comprises four stages: wafer/chip probing (CP), final test (FT), system-level test (SLT), and burn-in. CP is conducted at the wafer-level before packaging, while FT, SLT, and burn-in occur after packaging. The below Figure 1 illustrates the semiconductor manufacturing flow.

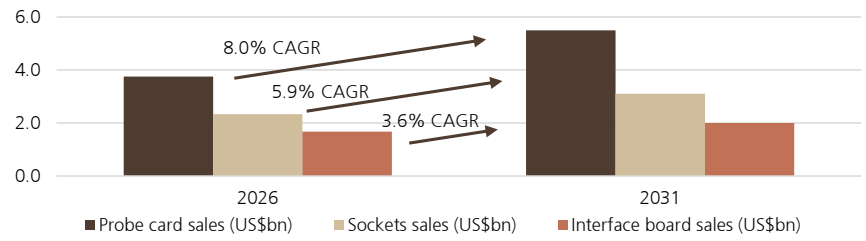
Figure 1: Semiconductor testing process: from wafer level to package level



Source: UBS

We estimate semiconductor testing historically accounts for ~1% of total semiconductor revenue. Within testing, consumables such as probe cards, sockets and interface boards represent ~10-15% of industry revenue. According to Yole, the probe card, socket and interface board markets should grow from US$3.8bn, US$2.3bn and US$1.7bn in 2026 to US$5.5bn, US$3.1bn and US$2.0bn by 2031, respectively.

Figure 2: Yole estimating testing consumables TAM to climb in the next 5 years



Source: Yole, UBS

Nonetheless, leaders within the testing sector will standout among competition, with greater sales CAGR comparing to the industry.

As the leader of AI/HPC sockets, **WinWay** is set to deliver 2026-31E socket sales CAGR of 33%, underpinned by robust demand for final test and system-level test, with test content and test times rising which each iteration of new AI accelerators/CPU, more sockets and equipment will be needed in order to increase the throughput.

- **Strong accelerator/CPU roadmap to support growth.** Robust testing demand can also be inferred from AI accelerator/CPU roadmaps of Nvidia, AMD, Google, alongside tester capacity expansions by Advantest.
- **Capacity expansion underpinning future strength.** WinWay's socket pin capacity expansion is expected by the company to support this exceptional sales growth from 3.5mn pins per month at year-end 2025 to 6mn currently, reaching

9mn by year-end 2026 and 14mn by year-end 2027 through expansions in Renwu, Kaohsiung. By 2027, approximately 60% of pogo-pin requirements should be internally sourced, strengthening both supply security and margins.

- **Probe card business to rise from smaller base.** Its probe card business is also set to benefit from the shift-left trend for high-end AI/HPC probe cards. WinWay leverages its existing customers' demand in addition to their MEMS partnership with Technoprobe, as we forecast WinWay's probe card sales to rise from a low base, with a 33% 2026-31E sales CAGR.

Figure 3: WinWay is set to benefit with a 33% 2026-31E sales CAGR

Source: UBS estimates

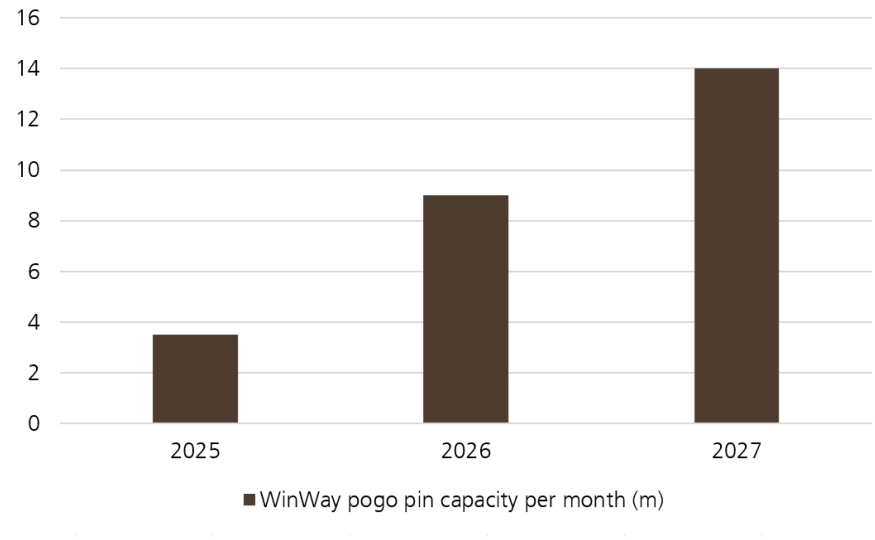
WinWay is expanding capacity rapidly to capture this growing TAM. Industry test interface suppliers are expanding capacity aggressively to meet rising AI and HPC demand. As advanced semiconductors require higher-performance probe cards, sockets and interface boards, capacity additions are becoming increasingly important to support growth across both wafer-level and package-level testing.

We believe WinWay is well positioned to gain share within the high-end AI/HPC test interface market. Taiwanese suppliers benefit from their proximity to leading fabless customers and the growing preference for localised supply chains, particularly for advanced testing applications where responsiveness and engineering support are critical. Against a backdrop of tight industry supply, WinWay announced significant capacity expansion plans over the next two to three years.

WinWay's capacity is expected by the company to increase from 3.5mn pins per month at year-end 2025 to 6mn currently, reaching 9mn by year-end 2026 and 14mn by year-end 2027 through expansions in Renwu, Kaohsiung. By 2027, approximately 60% of pogo-pin requirements should be internally sourced, strengthening both supply security and margins.

We estimate these capacity additions will support revenue growth of 105%/74%/71% in 2026E/27E/28E.

Figure 4: Announced capacity expansions for WinWay



Source: Company data

For WinWay, this growth opportunity is substantial, as the capacity expansions for its socket pins will satisfy around 60% of its own pogo pin demand in 2027E, we estimate socket sales will likely contribute for around NT$163 of EPS in 2027E and to further expand to NT$307 in 2028E. This paves the way for substantial share gaining opportunity for WinWay for AI/HPC sockets as we believe there are advantages to have footprint within Taiwan, where there's already an established testing ecosystem with testing providers such as ASE/SPIL/KYEC, and handler providers such as Hon Precision, all positioned locally in Taiwan to provide around the clock service and support for AI/HPC customers.

We see industry capacity tightness to support socket pin ASP growth, as we forecast pin ASP to grow from US$2.0 in 2026E to US$2.5 in 2027E and US$3.0 in 2028E. We believe WinWay's capacity expansion creates a significant growth opportunity with a better margin profile. By 2027E, approximately 60% of pogo pin demand should be internally sourced, improving both supply security and profitability. We estimate sockets could contribute around NT$123 of EPS in 2027E, rising to NT$261 in 2028E. Combined with its expanding capacity, strong customer relationships and proximity to Taiwan's semiconductor testing ecosystem, including ASE/SPIL, KYEC and major handler suppliers, WinWay is well positioned to gain share in the AI/HPC socket market.

Figure 5: We see socket pin expansions to drive significant growth in the next 2-3 years

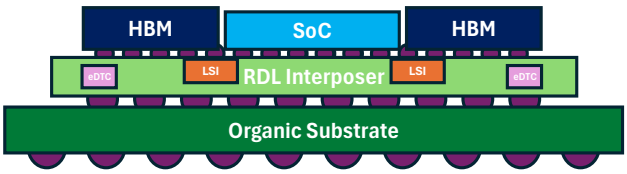
Source: UBS estimates

The AI era has materially increased the value of semiconductor testing. Compared with traditional mobile and automotive chips, AI accelerators incorporate larger compute dies, more advanced nodes, chiplet architectures, advanced packaging technologies, multiple I/O dies, and increasing HBM content. These factors drive higher-value test consumables, including advanced MEMS probe cards, multilayer interface boards, and next-generation sockets designed to support higher pin counts, thermal loading, and power delivery requirements.

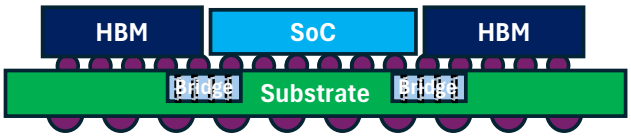
Capacity expansion by test interface vendors is ultimately supported by continued investment throughout the advanced packaging ecosystem, from providers such as TSMC, ASE, Intel, and Amkor. During the Q226 earnings calls, TSMC raised its recent 2026 capex from US$52-56bn to US$60-64bn and ASE raised its 2026 capex from US $8.5bn to US$10.5bn, with both companies citing robust demand supporting capex raise, we believe capex for the next two years will be even higher than 2026, indicating continuous growth in future years. With advanced packaging technologies getting significantly more complex and with larger form factor, illustrated by the upcoming ramp of both TSMC's CoPoS (chip-on-panel-on-substrate) and Intel's EMIB-T (embedded multi-die interconnect bridge) packaging technologies, test interface solution providers will benefit with more value added consumables (see our CoPoS vs EMIB-T deep dive).

Figure 6: TSMC's CoPoS



Source: UBS

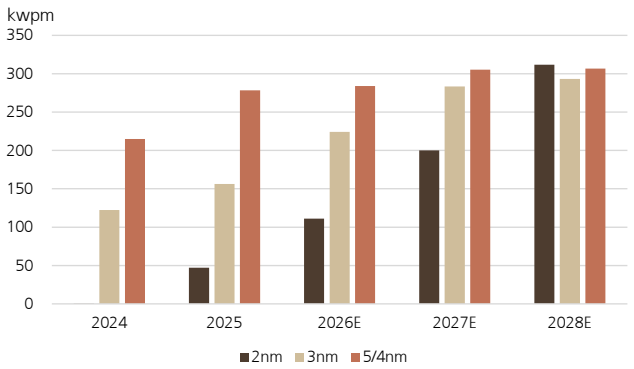
Figure 7: Intel's EMIB-T



Source: UBS

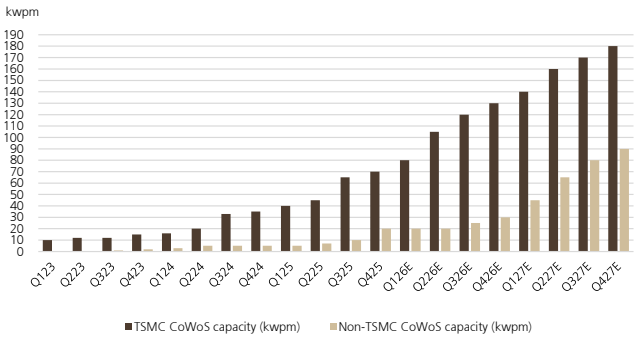
New iterations of semiconductors, especially for AI / HPC applications, are set to increase in both front-end wafer fabrication advancements and back-end packaging complexities with each iterations (i.e. Nvidia's roadmap from Blackwell to Rubin to Feynman or Google's TPU roadmap from v7 to v8 to v9). This trend is evident with TSMC's front-end and TSMC, Intel, and OSAT's back-end advanced packaging capacity expansions. For front-end, we see industry N3 capacity expanding from 156kwpm in year end 2025 to 224/283/293kpwm in year end 2026E/27E/28E, and N2 capacity from 47kwpm in year-end 2025 to 111/200/312kpwm in year end 2026E/27E/28E. For back-end, we are seeing industry CoWoS capacity to rise from 90kwpm in 2025 to 160kwpm in 2026E and further expand to 270kwpm in 2027E.

Figure 8: Industry's leading edge capacity



Source: UBS estimates

Figure 9: Industry CoWoS capacity

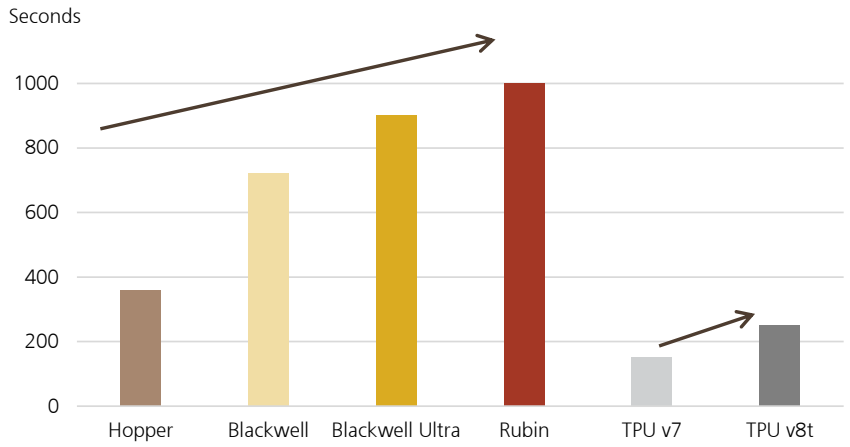


Source: UBS estimates

Final-test, system-level test, and burn-in content should continue to increase as AI accelerators become larger, more power-hungry and more complex. Rising thermal design power and packaging complexity increase validation requirements, driving

longer test times and higher demand for test equipment to prevent testing from becoming a production bottleneck. This is where **WinWay**'s sockets comes into play—as high-end chips with 2.5D/3D/3.5D packaging requires intricate FT sockets to handle the high thermal design power (TDP) and high data rates of up to 224G during the FT process for reliable test results.

Figure 10: Our FT test time estimates



Source: UBS estimates

While architectural changes can affect test requirements for individual product generations, we expect the long-term trend of rising testing content to remain intact. For example, Nvidia's Rubin Ultra adopts a simpler package structure than previously expected, from a 4-die structure to a 2-die structure and Rubin Ultra HBM de-spec from HBM4E 12-Hi to initially use HBM4 8-Hi and upgrade to HBM4E 8-Hi at the latter stages, which may moderate near-term test growth. However, future products such as Nvidia's Feynman are expected to reintroduce greater package complexity, with a four-GPU per package structure. More importantly, any reduction in test time can be offset by higher production volumes, making throughput requirements equally important for testing demand.

We expect test interface content growth to outpace unit growth, For instance, test socket's ASP directly correlates with its pin counts, with the addition of 20-30% more pins inside the sockets, socket ASP can grow 20-30% or more as the socket might require significant cooling capabilities as the TDP of the DUT rises with its larger form factor. Unlike prior semiconductor cycles, much of the current demand is driven by rising test interface content per device rather than unit growth alone.

Robust growth drivers across semiconductor testing

We believe WinWay is set to benefit from several semiconductor testing growth drivers and capture the AI induced, expanding testing TAM. We see three main growth drivers for WinWay: 1) AI accelerators (GPU + TPU), 2) agentic AI driven CPU demand, and 3) shift-left testing trend. Below we list the three main growth drivers in detail.

Accelerators still in focus with TPU as another significant growth driver

Nvidia has been the primary driver of testing content growth over the past several years, benefiting the entire semiconductor testing supply chain. We expect this trend to continue as GPU architectures evolve from Blackwell to Rubin and then to Feynman, with increasing process node complexity, larger package sizes and more advanced packaging technologies driving higher testing value per device.

We believe Nvidia should remain a major contributor to WinWay, with GPUs continuing to serve as their core growth engine. We estimate WinWay's socket share could improve from a roughly 50/50 split with Smiths Interconnect in prior generations to 60/40 with Rubin. Nvidia currently accounts for approximately 50% of WinWay's revenue. Both Nvidia GPUs and Google TPUs increase testing demand through higher content per device rather than unit growth alone.

Beyond Nvidia, Google's TPU roadmap represents a significant incremental growth opportunity. In our view, WinWay should benefit as the socket supplier for both TPU v8t and the next-generation TPU v9 platform. We believe MediaTek's increasing share gain for Google TPUs will also benefit the local Taiwanese test interface supply chain. We estimate TPU to contribute to around 20% of WinWay 2027E sales.

We view TPU v9 as a particularly attractive opportunity given its large four-die package architecture based on Intel's EMIB-T packaging technology, which should drive higher testing content. We estimate production of 4mn TPU v8t units in 2027E, followed by 2.3mn TPU v9 packages (9.2mn dies) and an additional 2mn TPU v8t units in 2028E. Importantly, while EMIB-T packaging is expected to be performed in Malaysia, we believe the majority of advanced testing value should remain within the Taiwanese testing ecosystem. Leading testing providers, including ASE and KYEC, maintain substantial testing operations across Taiwan and Southeast Asia, supporting continued participation by Taiwanese test interface suppliers. See our latest MediaTek report and EMIB-T deep dive.

CPU business as a supplemental catalyst for test interface companies in the agentic world

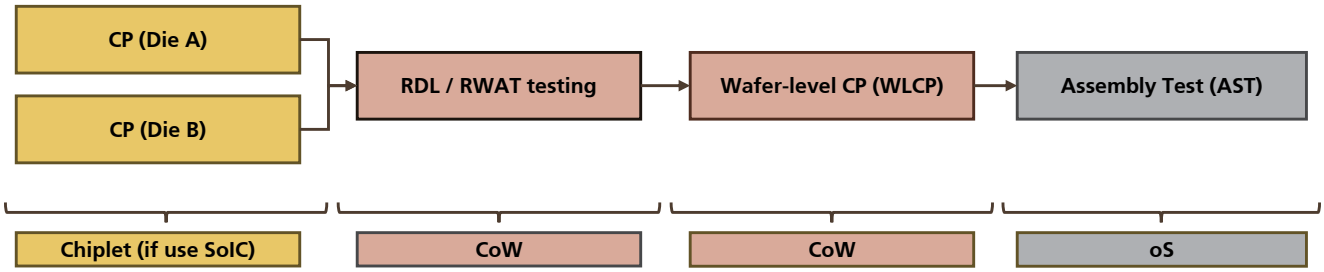
We believe semiconductor test interface are an underappreciated beneficiary of the emerging agentic AI ecosystem. UBS estimates the CPU market will expand to US $170bn by 2030E from US$31bn in 2025 and US$71bn in 2027E, driven by rising deployment of AI infrastructure. As CPU-to-GPU ratios increasingly approach 1:1 in AI clusters, demand for testing interfaces should expand alongside CPU volumes. TSMC is the main CP test provider in the industry, with probe card suppliers aiding its massive demand by supplying probes, such as TSMC's GPU probe cards supported by Technoprobe's probes. However, with capacity now becoming scarce with strong front and back-end demand, TSMC is outsourcing its CP business to ASE and KYEC, further broadening the testing supply chain. This is where new probe card vendors come in—smaller probe card players in the past, such as WinWay, now has the opportunity to gain significant, non-GPU share from TSMC, as they have MEMS probe capabilities (WinWay's MEMS probe are from its strategic partnership with Technoprobe) and has a long established relationship with the fabless companies such as Nvidia via supplying non-probe card consumables such as sockets. Of which, CPU projects has become the main area for WinWay to expand their footprint.

We expect WinWay to benefit from the ramp of Nvidia's ARM-based Vera CPU and Google's ARM-based Axion CPU in 2026E-27E. WinWay is positioned to supply sockets and probe cards for Vera and sockets for Axion. Additional upside could come from AMD's Venice CPU, where WinWay is well positioned. For WinWay, CPU-related demand could account for approximately 30% of sales in 2026E-27E. Importantly, CPU programmes diversify exposure beyond AI GPUs and provide a second structural growth driver for test interface suppliers.

Shift-left igniting secular growth for chip probing

The industry's adoption of shift-left testing should drive a multi-year structural growth opportunity for chip probing (CP) and its supply chain. As advanced packaging costs rise and AI accelerators become increasingly complex, semiconductor manufacturers are placing greater emphasis on identifying known-good dies (KGD) before packaging. The test shift-left trend will drive structural AI/HPC probe card and test consumables demand, with increasing test interface content as test insertions and test time increase. WinWay should also benefit through its partnership with Technoprobe, with probe card revenue growth remaining robust at 94%/72% in 2026E/27E following 161%/260% growth in 2024/25.

Figure 11: CP is set to grow substantially with shift-left, each packaging step set to be MORE costly than the prior step



Source: UBS

The economics of advanced packaging reinforce this trend. Heterogeneous integration, chiplet architectures and 2.5D/3D packaging significantly increase package value, while defects identified late in the manufacturing process can lead to substantial scrap costs. To mitigate this risk, foundries and OSATs such as TSMC and ASE employ distributed testing flows incorporating KGD, known-good-stack (KGS) and assembly test screening, to catch defects before the components enter a multi-week packaging cycle (>2 weeks for CoW and 2 weeks for oS). The importance of these tests rises as AI clusters become increasingly dependent on component reliability and low defective-parts-per-million (DPPM) rates. Given the multiplicative yield degradation, a 300bps yield decline at just one manufacturing stage (e.g. dropping from 99.5% to 96.5%) reduces overall integrated four-stage yield from 98.0% to 95.0%; on a 500,000 unit ramp at US $10,000 per unit, this 3% scrap delta translates into around US$150m in unrecoverable losses given >6-month manufacturing lead times.

At the same time, rising chip power consumption is increasing the technical difficulty of wafer-level testing. As chip thermal design power scales beyond 1,000W and power density is expected by the industry to surge another 8x by 2030, traditional wafer-level chip probe (WLCP) encounters severe physical bottlenecks. Finer probe pitches and higher power densities increase the risk of overheating, probe needle burnout and yield degradation, creating demand for more advanced probing and thermal-control solutions.

WinWay was founded in 2001 in Kaohsiung, Taiwan, and is a leading provider of semiconductor testing interface solutions, with test sockets representing its core business. The company focuses on advanced AI/HPC applications, supplying sockets for final test (FT), system-level test (SLT) and burn-in, as well as cobra probe cards and partnership with Technoprobe for MEMS probe cards.

WinWay's business is primarily divided into two segments:

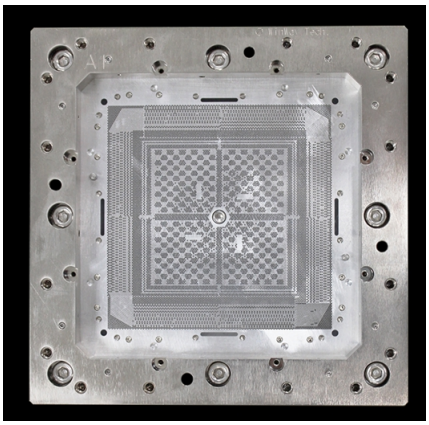
- **Test socket:** Sockets are WinWay's largest revenue contributor. The company supplies a broad range of testing sockets, including coaxial, PoP/plastic and burn-in sockets, serving applications ranging from consumer electronics to high-performance computing.
    - **Coaxial socket:** utilised as the mainstream option for nearly all AI/HPC chips, as traditional sockets are near its physical limits. Coaxial sockets need to handle data rates of up to 224G for high speed transmission and high chip TDP during the FT process.
    - **HyperSocket:** a rubber-silicone like layer called **elastomer** are placed on top of the pogo pins, these elastomer pins causes zero damage to the chips being tested under high contact forces. WinWay's next generation HyperSocket technology utilises elastomers to provide a softer contact between the DUT and the pogo pins, avoiding damage to solder ball. This structure significantly enhances spring probe's lifetime, reduces cleaning frequency, and achieves maximum production efficiency. We estimate it will contribute around 5% of sales in 2027E with a 20-30% ASP premium as compared to standard coaxial socket.
- **Probe cards:** WinWay historically supplies cobra probe cards (vertical probe cards), but with the company announcing their five-year probe supply deal with Technoprobe for MEMS probe in December 2025, they are now one of Nvida Vera CPU's main probe card suppliers.

AI accelerators are pushing socket requirements beyond 10,000 pins, making **coaxial sockets** the industry standard for leading-edge AI/HPC devices. These sockets must support transmission speeds of up to 224G while handling significantly higher thermal design power (TDP) during testing.

Elastomer technology is increasingly being adopted alongside spring-probe (pogo-pin) architectures to reduce chip damage and improve contact reliability. WinWay's next-generation **HyperSocket** integrates elastomer materials between the DUT and spring probes, improving probe lifetime, reducing cleaning requirements and enhancing production efficiency. We believe HyperSocket could become an important differentiator as next-generation AI accelerators demand higher pin counts, bandwidth and thermal performance. We estimate HyperSocket could contribute approximately 5% of WinWay's revenue in 2027E while carrying a 20-30% ASP premium versus conventional coaxial sockets. The transition toward larger AI packages, higher pin counts and faster data-transfer speeds should continue to increase socket content per device. We expect this trend to support long-term growth in the socket market, with technology leaders such as WinWay well positioned to gain share through next-generation solutions including HyperSocket.

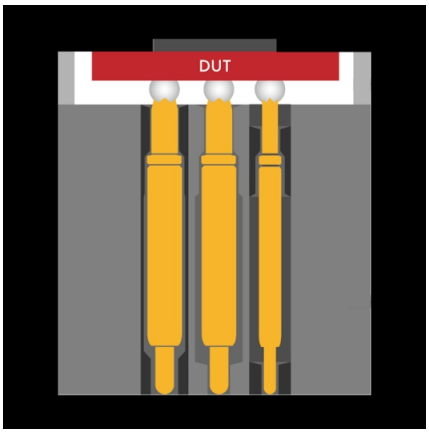
Beyond its existing product portfolio, WinWay is developing next-generation technologies including CPO electrical test sockets and liquid-cooled sockets for future high TDP AI accelerators, reinforcing its position within the AI/HPC testing ecosystem.

Figure 15: Coaxial socket



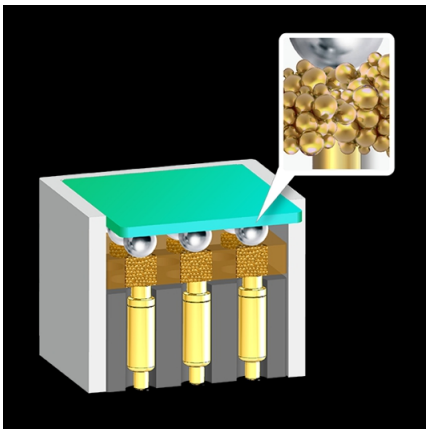
Source: Company data (WinWay)

Figure 16: DUT socket contact



Source: Company data (WinWay)

Figure 17: HyperSocket



Source: Company data (WinWay)

WinWay's competitive advantages are its 1) technology leadership with coaxial socket and HyperSocket, 2) proximity to the semiconductor testing value chain in Taiwan, and 3) historical relationship with key AI companies such as Nvidia and AMD. We believe these advantages may allow WinWay to capture significant upside in the growing semiconductor testing TAM driven by cloud AI proliferation, and gain share across its competition such as Smiths Interconnect for AI and HPC applications.

Figure 18: WinWay's socket sales growth

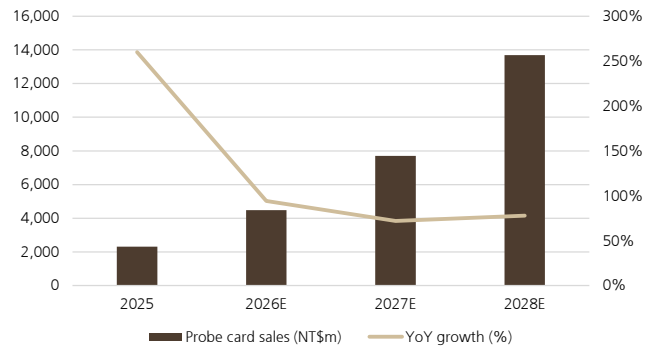
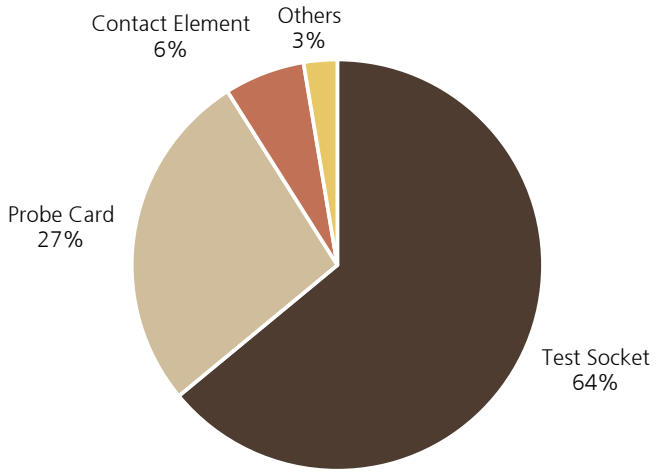
Figure 19: WinWay' probe card sales growth



Source: Company data, UBS estimates

Figure 20: WinWay's H126 product mix

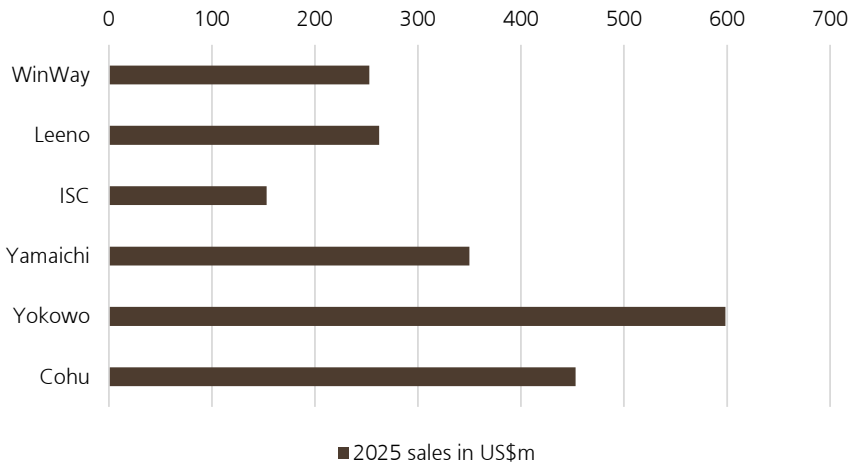


Source: Company data, UBS

Compared with the probe card market, the socket industry is more fragmented. Competition include:

- **WinWay (6515.TW)**: A major share gainer in AI/HPC sockets, with strong exposure to Nvidia and AMD. The company specializes in high-performance coaxial sockets and is developing its next-generation HyperSocket platform. It is also expanding into probe cards through its partnership with Technoprobe.
- **Leeno (058470.KQ)**: Vertically integrated supplier focused on smartphone AP and memory sockets.
- **ISC (095340.KQ)**: Memory socket supplier with elastomer expertise.
- **Smiths Interconnect (Acquired by Molex)**: A key player in AI/HPC socket industry, with its DaVinci coaxial sockets able to support high frequency connectivity testing.
- **Yamaichi (6941.T)**: Japanese socket supplier with substantial automotive exposure.
- **Yokowo (6800.T)**: Major provider of contact probes and socket pins.
- **Cohu (COHU.O)**: Broad test-solutions provider spanning ATE, handlers and sockets, with high exposure to automotive, industrial and consumer applications.

Figure 21: 2025 sales of major socket suppliers



Source: Company data, UBS. Note: Most socket suppliers are companies with multiple business segments, i.e. Yokowo and Cohu.

WinWay's margin is set to recover in 2027E/28E

Company GM hit a trough in Q226, at 38.3%. We view recent margin pressure as largely temporary. GM has been impacted by MEMS probe sourcing through Technoprobe (probe card GM now below 40% and dilutive to >50% coaxial socket GM) and start-up costs associated with WinWay's rapid capacity expansion. During the early part of 2025, WinWay's GM was high at 48.9% in H125, with more cobra probe cards (60% GM) in mix with solid pogo pin and socket yield. With MEMS probe card now accounting for more than 70% of probe card revenue and GM at around low to mid 30%, margin dilution from probe card business is unlikely to unravel for GM to return to above 45% in the near term due to the MEMS partnership terms with Technoprobe. However, we expect that as new facilities ramp and yields improve, profitability to recover gradually from the Q226 trough. We see GM improving to 43.1% in 2027E and 44.7% in 2028E.

Figure 22: We believe WinWay' GM will gradually recover in the next two-three years

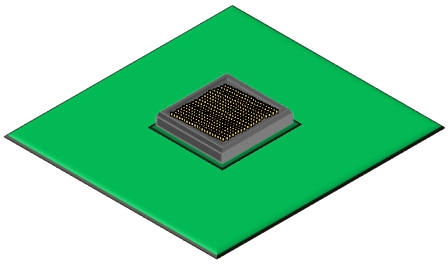
Appendix: What are semiconductor test sockets?

Semiconductor test socket are electro-mechanical interface that are used post chip probing and chip packaging process to test the functionality of the chips. Sockets are placed onto load boards on top of testers during the final test/system level test processes. Handlers will place the chips onto the sockets, and pins inside the sockets will enable the testers to read the signals from the device under test (DUT, i.e. the packaged chips), with tester signals fan out from beneath the PCB load board.

Figure 27: Socket illustration (with load board underneath)



Source: UBS

As AI accelerators become larger and more complex, socket requirements continue to increase. High-end sockets typically comprise a socket housing, alignment plate, integrated thermal-control components and contact elements that connect the DUT to the tester. Spring probes (pogo pins) are the most common choice for HPC sockets, with high durability, individual probe replacement flexibility, and consistent contact force. FT and SLT sockets account for more than 70% of the total socket market, with burn-in sockets representing the remainder.

Figure 28: Final test equipment and consumables (simplified for illustration purposes, handlers should come with ATC)

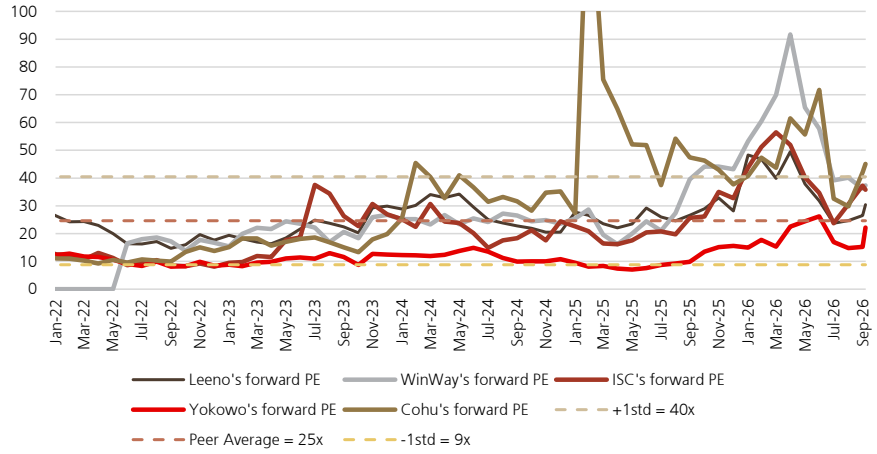
WHAT´S PRICED IN?

WinWay is trading at NT$6,130 as of 6 Oct 2026



Source: LSEG, UBS estimates

Despite a 120% YTD share-price increase, WinWay remains 43% below its April 2026 peak and trades at only 16x our 2028E P/E. We believe the market remains overly focused on near-term GM pressure while underestimating the company's multi-year growth opportunity. Our reverse DCF analysis indicates that the current market price implies only a 19% long-term sales CAGR vs our estimate of 25%, alongside long-term GM level of 32% vs our estimate of 45%.

We believe investors are not fully reflecting three key drivers:

1) CPU and TPU opportunities are becoming increasingly meaningful.

Beyond its core GPU socket franchise, WinWay is positioned to benefit from Nvidia's Vera CPU, AMD's Venice CPU, and Google's TPU. These programmes should broaden revenue sources and create an additional demand driver for high-end sockets and probe cards.

2) Larger AI packages are driving higher socket content per device.

As AI accelerators adopt larger form factors, higher pin counts and greater power consumption, socket complexity and ASPs continue to rise. We expect socket content growth to outpace semiconductor unit growth, creating a structural tailwind for WinWay.

3) Capacity ramp and margin recovery are not fully reflected.

Following substantial capacity expansion, we expect revenue growth of 105%/74%/71% in 2026E/27E/28E. At the same time, we forecast gross margin recovery from 38.3% in Q226 to 43.1%/44.7% in 2027E/28E as utilization and yields improve.

Our NT$8,900 price target is based on our valuation for WinWay at 30x average 2027E-28E P/E, in-line with its historical average of 30x and underpinned by a 30% 2027-31E earnings CAGR. Comparing with historical NTM peer average PE of roughly 25x (currently trading at 39x NTM PE), we believe WinWay deserves to trade at a premium given its leadership in AI/HPC sockets, expanding CPU and TPU exposure, and our long-term earnings CAGR estimate.

UPSIDE/DOWNSIDE SPECTRUM

WinWay is trading at NT $6,130 as of 6 Oct 2026

Value drivers (2027/28E)	Test socket sales growth	Probe card sales growth	GM %
NT$10,000 upside	90%/87%	87%/93%	45.1%/49.7%
NT$8,900 base	75%/69%	72%/78%	43.1%/44.7%
NT$4,000 downside	35%/34%	32%/38%	38.1%/39.7%

Source: UBS estimates

Risk to the current share price is skewed (1.8:1) to the upside

UPSIDE (NT$10,000): Our upside scenario reflects stronger than expected market share gain among Nvidia's Rubin sockets and Vera CPU probe card strength, with strong TPU v9 shipment in 2028E, forming 90%/87% YoY test socket sales growth and 87%/93% probe card sales growth in 2027/28E, translating to higher sales growth of 82%/75% in 2027/28E and steeper GM recovery in 2027/28E.

BASE (NT$8,900): Our price target of NT$8,900 is based on 30x average 2027-28E PE. We expect an earnings CAGR of 30% in 2027-31E. With extending FT time and larger form factor coaxial sockets, we see these growth drivers driving YoY sales growth from a high base of 105% in 2026E to 74%/71% YoY in 2027/2028E, with OPM of 32.1%/36.7% in 2027/28E.

DOWNSIDE (NT$4,000): Our downside scenario reflects slow GM recovery of 38.1%/39.7% in 2027/28E, with weaker growth for both socket and probe card businesses for slower capacity ramp up, leading to YoY sales growth of 22.3%/34.8% in 2027/28E, respectively.

COMPANY DESCRIPTION

WinWay was founded in 2001 in Kaoshiung, Taiwan. It is a semiconductor testing interface solution provider, with final test sockets as its main business segment. The company has high-end solutions for AI/HPC testing, providing final test/system-level test and burn-in test sockets and probe cards through its own-made probes and a partnership with Technoprobe.

Industry Outlook

New iterations of semiconductors, especially for AI / HPC applications, are set to increase in both front-end wafer fabrication advancements and back-end packaging complexities with each iterations. With the industry now moves to utilize "shift left", chip probing and its relevant supply chain will be key beneficiaries of this trend which we believe will unlock multi-year, secular growth trends.

Company Description

WinWay was founded in 2001 in Kaoshiung, Taiwan. It is a semiconductor testing interface solution provider, with final test sockets as its main business segment. The company has high-end solutions for AI/HPC testing, providing final test/system-level test and burn-in test sockets and probe cards through its own-made probes and a partnership with Technoprobe.

Valuation Method and Risk Statement

We value WinWay based on PE methodology.
Risks for the semis industry:
- Geopolitical uncertainties: Geopolitical uncertainties including tariffs and more export control could negatively impact semis cycle, and a downturn would lead to slower demand in the overall market and moderating capacity expansion.
- Meaningful deceleration of new technology development: Slower demand and less investment are expected If there is meaningful deceleration of new technology development such as Cloud AI, autonomous driving, etc.
- Rising utility cost: Larger-than-expected utility cost increases would further pressure profitability. Rising utility costs in Taiwan have negatively impacted margins for Taiwan tech companies.
Company risks:
- Faster- or slower-than-expected CoWoS capacity expansion: This could result in WinWay gaining/losing socket/probe card orders from major end customers, foundries, and OSATs.
- Competitors achieving technological advancement: Potential risk of competition (from either local or foreign companies) achieving technological advancements could result in WinWay losing market share from major end customers, foundries and OSATs.
- Better- or worse-than-expected AI growth: Better- or worse-than-expected AI growth could lead to a ramp-up or a slowdown of equipment orders from major foundries and OSATs to WinWay, affecting long-term revenue growth potential.
- Slowdown or delay of new technological advancement: A potential slowdown or delay of the rollout for technological advancements for technologies such as SoIC, CoPoS, and CPO, would limit future socket/probe card orders.
- Increase of raw material costs: Rising raw material costs may directly impact WinWay's margins for socket/probe card shipments.

Quantitative Research Review

UBS Global Research publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. The views for this month can be found below. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For previous responses please make reference to (i) previous UBS Global Research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on ubs-quant-answers@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research Team on the email above.

WinWay Technology

Question	Response
1. Is the industry structure facing the firm likely to improve or deteriorate over the next six months? Rate on a scale of 1-5 (1 = getting worse, 3 = no change, 5 = getting better, N/A = no view)	4
2. Is the regulatory/government environment facing the firm likely to improve or deteriorate over the next six months? Rate on a scale of 1-5 (1 = getting tougher 3 = no change, 5 = getting better, N/A = no view)	3
3. Over the last 3-6 months in broad terms have things been improving/no change/getting worse for this stock? Rate on a scale of 1-5 (1 = getting a lot worse, 3 = not much change, 5 = getting a lot better, N/A = no view)	3
4. Relative to the current CONSENSUS EPS forecast, is the next company EPS update likely to lead to: (1 = negative surprise vs consensus, 3 = in-line with consensus, 5 = positive surprise vs consensus expectations, N/A = no view)	3
5. What's driving the difference?	
6. Relative to YOUR current earnings forecast, is there relatively greater risk at the next earnings result of:(1 = downside skew risk to earnings, 3 = equal upside or downside risk to earnings, 5 = upside skew risk to earnings, N/A = no view)	3
7. What's driving the difference?	
8. Is there an upcoming catalyst for the company over the next three months?	No Catalyst
9. Is there an actual or approximate date for the catalyst?	
10. Is the catalyst date an actual or approximate date?	
11. What is the catalyst?	

Required Disclosures

This document has been prepared by UBS Securities Pte. Ltd., Taipei Branch, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates, including former Credit Suisse AG and its subsidiaries, branches and affiliates are referred to herein as "UBS".

For information on the ways in which UBS manages conflicts and maintains independence of its UBS Global Research product; historical performance information; certain additional disclosures concerning UBS Global Research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. Unless otherwise indicated, information and data in this report are based on company disclosures including but not limited to annual, interim, quarterly reports and other company announcements. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 07 October 2026 08:33 AM GMT. UBS has designated certain UBS Global Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS Global Research publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS Global Research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on ubs-quant-answers@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

Analyst Certification:
Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

UBS Global Research: Global Equity Rating Definitions

12-Month Rating	Definition	Coverage[1]	IB Services[2]
Buy	FSR is > 6% above the MRA.	55%	24%
Neutral	FSR is between -6% and 6% of the MRA.	39%	20%
Sell	FSR is > 6% below the MRA.	6%	21%

Source: UBS. Rating allocations are as of 30 September 2026.
1:Percentage of companies under coverage globally within the 12-month rating category.
2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS:Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES:UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Consultation (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

Research analysts contributing to this report who are employed by any non-US affiliate of UBS Securities LLC are not registered/ qualified as research analysts with FINRA. Such analysts may not be associated persons of UBS Securities LLC and therefore are not subject to the FINRA restrictions on communications with a subject company, public appearances, and trading securities held by a research analyst account. The name of each affiliate and analyst employed by that affiliate contributing to this report, if any, follows.

UBS Securities Pte. Ltd., Taipei Branch: Ryan Sun, Sunny Lin.

If you receive UBS Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via UBS Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via UBS Global Research or otherwise, without the prior written consent of UBS. You agree not to use UBS Global Research in any artificial intelligence system, without the prior written consent of UBS.

In certain circumstances you may receive UBS Global Research otherwise than in the capacity of a client of UBS and you understand and agree that under these circumstances (i) the UBS Global Research is provided to you for information purposes only; (ii) for the purposes of receiving it you are not intended to be and will not be treated as a "client" of UBS for any legal or regulatory purpose; (iii) the UBS Global Research must not be relied on or acted upon for any purpose; and (iv) such content is subject to the relevant disclaimers that follow.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

UBS notes that no globally accepted framework or definition (legal, regulatory or otherwise) currently exists, nor is there a market consensus as to what constitutes an "ESG" (Environmental, Social or Governance) or an equivalent-label, or as to what precise attributes are required for the Information (as defined below) to be defined as ESG or equivalently-labelled. Any information, data or other content including from a third party source contained, referred to herein or used for whatsoever purpose by UBS or a third party ("Information"), in relation to any actual or potential ESG objective, issue or consideration is not intended to be relied upon for ESG classification, regulatory regime or industry initiative purposes ("ESG Regimes"). Nothing in these materials is intended to convey, suggest or indicate that UBS considers or represents any product, service, person or body mentioned in these materials as meeting or qualifying for any ESG classification, labelling or similar standards that may exist under the ESG Regimes. UBS has not conducted any assessment of compliance with ESG Regimes. Parties are reminded to make their own assessments for these purposes.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a

complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. For further information on the ways in which UBS Global Research manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS Global Research recommendations, please visit https://www.ubs.com/disclosures.

UBS Global Research will initiate, update and cease coverage solely at the discretion of UBS Global Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

UBS Global Research may utilise artificial intelligence tools ("AI Tools") in the preparation of this document. Notwithstanding any such use of AI Tools, this document has undergone human review.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by UBS Global Research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Please note that all transactions conducted by UBS are consistent with sanctions regulations imposed by Switzerland, the European Union, the United Nations, the United Kingdom and the United States, per UBS' global sanctions policy. UBS opinion as to future investment worthiness assumes no new sanctions are imposed.

US persons are prohibited from purchasing or selling securities of certain companies designated as being associated with the Chinese Military in accordance with the amended US Presidential Executive Order 13959.

United Kingdom: This material is distributed by UBS AG, London Branch to persons who are eligible counterparties or professional clients. UBS AG, London Branch is authorised by the Prudential Regulation Authority and subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. **Europe:** Except as otherwise specified herein, these materials are distributed by UBS Europe SE, a subsidiary of UBS AG, to persons who are eligible counterparties or professional clients (as detailed in the Bundesanstalt fur Finanzdienstleistungsaufsicht (BaFin) Rules and according to MIFID) and are only available to such persons. The information does not apply to, and should not be relied upon by, retail clients. UBS Europe SE is authorised by the European Central Bank (ECB) and regulated by the BaFin and the ECB. **Germany, Luxembourg, the Netherlands, Belgium and Ireland:** Where an analyst of UBS Europe SE has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE. In all cases it is distributed by UBS Europe SE and UBS AG, London Branch. **Turkey:** Distributed by UBS AG, London Branch. No information in this document is provided for the purpose of offering, marketing and sale by any means of any capital market instruments and services in the Republic of Turkey. Therefore, this document may not be considered as an offer made or to be made to residents of the Republic of Turkey. UBS AG, London Branch is not licensed by the Turkish Capital Market Board under the provisions of the Capital Market Law (Law No. 6362). Accordingly, neither this document nor any other offering material related to the instruments/services may be utilized in connection with providing any capital market services to persons within the Republic of Turkey without the prior approval of the Capital Market Board. However, according to article 15 (d) (ii) of the Decree No. 32, there is no restriction on the purchase or sale of the securities abroad by residents of the Republic of Turkey. **Poland:** Distributed by UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce. Where an analyst of UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce. **Russia:** Prepared and distributed by UBS Bank (OOO). Should not be construed as an individual Investment Recommendation for the purpose of the Russian Law - Federal Law #39-FZ ON THE SECURITIES MARKET Articles 6.1-6.2.**Switzerland:** Distributed by UBS AG to persons who are institutional investors only. UBS AG is regulated by the Swiss Financial Market Supervisory Authority (FINMA). **Italy:** Prepared by UBS Europe SE and distributed by UBS Europe SE and UBS Europe SE, Italy Branch. Global Wealth Management Disclaimer

You receive this document in your capacity as a client of UBS Global Wealth Management. This publication has been distributed to you by UBS Switzerland AG (regulated by FINMA in Switzerland) or its affiliates (**"UBS"**) with whom you have a banking relationship with. The full name of the distributing affiliate and its competent authority can be found in the country-specific disclaimer at the end of this document. UBS may utilise artificial intelligence tools ("AI Tools") in the preparation of this document. Notwithstanding any such use of AI Tools, this document has undergone human review.

The date and time of the first dissemination of this publication is the same as the date and time of its publication.

Risk information:

You agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research, and that you shall not extract data from any research or estimates, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is **for your information only**; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may

adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes: (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and UBS Global Research) and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/research-methodology.

Research will initiate, update and cease coverage solely at the discretion of research management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or sustainable investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio incorporating ESG factors or sustainable investing considerations may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Disclosures: If you require detailed information on disclosures of interest or conflict of interest as required by Market Abuse Regulation please contact the mailbox MAR_disclosure_twopager@ubs.com. Please note that e-mail communication is unsecured.

External Asset Managers / External Financial Consultants: In case this research or publication is provided to an External Asset Manager or an External Financial Consultant, UBS expressly prohibits that it is redistributed by the External Asset Manager or the External Financial Consultant and is made available to their clients and/or third parties.

Argentina: All securities that will be offered to you by UBS are not authorized by the Argentine Securities and Exchange Commission (CNV) and are not subject to its reporting, periodic information requirements, or oversight. Furthermore, the CNV has not reviewed or endorsed the information provided in any securities offering document, nor the accuracy of any accounting, financial, economic data, or any other information disclosed therein, which remains the sole responsibility of the respective issuer and the other parties involved. **Australia:** This document is provided by UBS Switzerland AG. UBS Switzerland AG does not hold an Australian Financial Services Licence (AFSL) and relies on an exemption to provide financial services to persons in Australia. This document is intended only for distribution to wholesale clients under the Corporations Act 2001 (Cth). UBS Switzerland AG is a related body corporate of UBS AG, Australia Branch and UBS Securities Australia Limited. This document may be distributed to clients by those entities, but it is provided by UBS Switzerland AG and is not provided under any of the other entities' AFSL. The information in this document is general in nature and is not intended to address the objectives, financial situation or needs of any particular individual or entity. Each recipient should consider their own objectives, financial situation or needs before acting on the advice and obtain the relevant Product Disclosure Statement (if required) before making any decision whether to acquire any product. In Australia, UBS entities, other than UBS AG, Australia Branch, are not authorized deposit-taking institutions for the purposes of the Banking Act 1959 (Cth.) and their obligations do not represent deposits or other liabilities of UBS AG, Australia Branch. UBS AG, Australia Branch does not guarantee or otherwise provide assurance in respect of the obligations of such UBS entities or the funds. An investor is exposed to investment risk including possible delays in repayment and loss of income and principal invested, as relevant. If you do not wish to receive marketing materials from UBS, please contact your UBS representative or the contact details listed in the Australia Privacy Notice: https://www.ubs.com/global/en/legal/privacy.html. Your personal data will be processed in accordance with this notice. **Bahrain**: This report is being distributed by UBS AG, Bahrain Branch, duly licensed and regulated by the Central Bank of Bahrain (CBB) as an Investment Business Firm - Category 2 (Branch). Related financial services or products are only made available to Accredited Investors, as defined by the CBB, and are not intended for any other persons. UBS AG, Bahrain Branch is

a Foreign Branch of UBS AG, Zurich/Switzerland and is located on Level 21, East Tower, Bahrain World Trade Centre, Manama, Kingdom of Bahrain. **Brazil**: This report is distributed in Brazil by UBS BB Corretora de Câmbio, Títulos e Valores Mobiliários S.A. or its affiliates ("UBS"). Pursuant to CVM Resolution No. 20/2021, of February 25, 2021, the author(s) of the report hereby certify(ies) that the views expressed in this report solely and exclusively reflect their personal opinions and have been prepared independently, including with respect to UBS. Part of the author(s)'s compensation is based on various factors, including the total revenues of the relevant UBS Group entity of which they are in employment of, but no part of the compensation has been, is, or will be related to the specific recommendations or views expressed in this report. In addition, UBS declares that: UBS has provided, and/or may in the future provide investment banking, brokerage, asset management, commercial banking and other financial services to the subject company/companies or its affiliates, for which they have received or may receive customary fees and commissions, and which constituted or may constitute relevant financial or commercial interests in relation to the subject company/companies or the subject securities. **Canada**: The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. Under no circumstances is the information contained herein to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada or, alternatively, pursuant to a dealer registration exemption. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed upon these materials, the information contained herein or the merits of the securities described herein and any representation to the contrary is an offence. In Canada, this publication is distributed by UBS Investment Management Canada Inc. **China**: This report and any offering material such as term sheet, research report, other product or service documentation or any other information (the "Material") sent with this report was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the material erroneously, UBS asks that you kindly delete it and inform UBS immediately. This report is prepared by UBS Switzerland AG or its offshore subsidiary or affiliate (collectively as "UBS Offshore"). UBS Offshore is an entity incorporated out of China and is not licensed, supervised or regulated in China to carry out banking or securities business. The recipient should not contact the analysts or UBS Offshore which produced this report for advice as they are not licensed to provide securities investment advice in China. UBS Investment Bank (including Research) has its own wholly independent research and views which at times may vary from the views of UBS Global Wealth Management. The recipient should not use this document or otherwise rely on any of the information contained in this report in making investment decisions and UBS takes no responsibility in this regard. **Denmark**: This publication is not intended to constitute a public offer under Danish law. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed without the consent of UBS. None of the Material has been registered or filed under the prevailing laws and with any financial or regulatory authority in your jurisdiction. The Material may not have been approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including futures contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Israel**: UBS is a premier global financial firm offering wealth management, asset management and investment banking services from its headquarters in Switzerland and its operations in over 50 countries worldwide to individual, corporate and institutional investors. This publication is intended for information only and is not intended as an offer to buy or solicitation of an offer. Furthermore, this publication is not intended as an investment advice. Nothing contrary to the above, no action has been, or will be, taken in Israel that would permit an offering of the product(s) mentioned in this document or a distribution of this document to the public in Israel. In particular, this document has not been reviewed or approved by the Israeli Securities Authority. The product(s) mentioned in this document is/are being offered to a limited number of sophisticated investors who qualify as one of the investors listed in the first supplement to the Israeli Securities Law, 5728-1968. This document may not be reproduced or used for any other purpose, nor be furnished to any other person other than those to whom copies have been sent. Anyone who purchases the product(s) mentioned herein shall do so for its own benefit and for its own account and not with the aim or intention of distributing or offering the product(s) to other parties. Anyone who purchases the product(s) shall do so in accordance with its own understanding and discretion and after it has received any relevant financial, legal, business, tax or other advice or opinion required by it in connection with such purchase(s). The word "advice" and/or any of its equivalent terms shall be read and construed in conjunction with the definition of the term "investment marketing" as defined under the Israeli Regulation of Investment Advice, Investment Marketing and Portfolio Management Law. The Swiss laws and regulations require a number of mandatory disclosures to be made in independent financial research reports or recommendations. Pursuant to the Swiss Financial Market Infrastructure Act and the Financial Market Infrastructure Ordinance-FINMA, banks must disclose the percentage of voting rights they hold in companies being researched, if these holdings are equal to or exceed the statutory thresholds. In addition, the Directives on the Independence of Financial Research, issued by the Swiss Bankers Association, mandate a number of disclosures, including the disclosure of potential conflicts of interest, the participation within previous 12 months in any securities issues on behalf of the company being researched, as well as the fact that remuneration paid to the financial analysts is based generally upon the performance of (i) the new issues department or investment banking; or (ii) securities trading performance (including proprietary trading) or sales. **Italy**: This publication is not intended to constitute a public offer under Italian law. It is distributed only for information purposes to clients of UBS Europe SE, Succursale Italia, with place of business at Via del Vecchio Politecnico, 3-20121 Milano. UBS Europe SE, Succursale Italia is subject to the joint supervision of the European Central Bank, the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, "BaFin"), as well as of the Bank of Italy (Banca d'Italia) and the Italian Financial Markets Supervisory Authority (CONSOB - Commissione Nazionale per le Società e la Borsa), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by BaFin. **Japan**: This report is solely distributed in Japan by UBS SuMi TRUST Wealth Management Co., Ltd, Financial Instruments Dealer, Director-General of Kanto Local Finance Bureau (Kinsho) No. 3233, a member of the Japan Securities Dealers Association, Financial Futures Association of Japan, Investment Management Association of Japan. UBS SuMi TRUST Wealth Management Co., Ltd will not distribute or

forward this report outside Japan. **Jersey**: UBS AG, Jersey Branch, is regulated and authorized by the Jersey Financial Services Commission for the conduct of banking, funds and investment business. Where services are provided from outside Jersey, they will not be covered by the Jersey regulatory regime. UBS AG, Jersey Branch is a branch of UBS AG a public company limited by shares, incorporated in Switzerland whose registered offices are at Aeschenvorstadt 1, CH-4051 Basel and Bahnhofstrasse 45, CH 8001 Zurich. UBS Luxembourg is furthermore supervised by the Luxembourg prudential supervisory authority (Commission de Surveillance du Secteur Financier), in its role as host member state authority. This publication has not been submitted for approval to any public supervisory authority. **Malaysia**: This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Mexico**: This information is distributed by UBS Asesores México, S.A. de C.V. ("UBS Asesores"), an affiliate of UBS Switzerland AG, incorporated as a non-independent investment advisor under the Mexican regulation due to the relation with a Foreign Bank. UBS Asesores is registered under number 30060-001-(14115)-21/06/2016 and subject to the supervision of the Mexican Banking and Securities Commission ("CNBV") exclusively regarding the rendering of (i) portfolio management services, (ii) securities investment advisory services, analysis and issuance of individual investment recommendations, and (iii) anti-money laundering and terrorism financing matters. This UBS publication or any material related thereto is addressed only to Sophisticated or Institutional Investors located in Mexico. Research reports only reflect the views of the analysts responsible for the report. The compensation of the analyst(s) who prepared this report is determined exclusively by research management and senior management of any entity of UBS Group to which such analyst(s) render(s) services. **Monaco**: This document is not intended to constitute a public offering or a comparable solicitation under the Principality of Monaco laws, but might be made available for information purposes to clients of UBS (Monaco) S.A., a regulated bank having its registered office at 2 avenue de Grande Bretagne 98000 Monaco operating under a banking license granted by the "Autorité de Contrôle Prudentiel et de Résolution" (ACPR) and the Monegasque government which authorizes the provision of banking services in Monaco. UBS (Monaco) S.A. is also licensed by the "Commission de Contrôle des Activités Financières" (CCAF) to provide investment services in Monaco. The latter has not approved this publication. **Philippines:** This communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Portugal**: UBS Switzerland AG is not licensed to conduct banking and financial activities in Portugal nor is UBS Switzerland AG supervised by the portuguese regulators (Bank of Portugal "Banco de Portugal" and Portuguese Securities Exchange Commission "Comissão do Mercado de Valores Mobiliários"). **Qatar**: UBS Qatar LLC is licensed by the Qatar Financial Centre Authority and authorized by the QFC Regulatory Authority, with QFC no. 01169, and has its registered office at Building No. 36, 4th Floor, Abdulla Bin Thani Street, Doha Design District 1, Msheireb Downtown Doha, State of Qatar. This material is strictly intended for Eligible Counterparties and/or Business Customers only as classified under the QFCRA's Customer and Investor Protection Rules 2019. No other person should act upon this material. **Russia**: This document or information contained therein is for information purposes only and constitutes neither a public nor a private offering, is not an invitation to make offers, to sell, exchange or otherwise transfer any financial instruments in the Russian Federation to or for the benefit of any Russian person or entity and does not constitute an advertisement or offering of securities in the Russian Federation within the meaning of Russian securities laws. The information contained herein is not an "individual investment recommendation" as defined in Federal Law of 22 April 1996 No 39-FZ "On Securities Market" (as amended) and the financial instruments and operations specified herein may not be suitable for your investment profile or your investment goals or expectations. The determination of whether or not such financial instruments and operations are in your interests or are suitable for your investment goals, investment horizon or the acceptable risk level is your responsibility. We assume no liability for any losses connected with making any such operations or investing into any such financial instruments and we do not recommend to use such information as the only source of information for making an investment decision. **Saudi Arabia**: This material is for marketing and information purposes by UBS Saudi Arabia only. It has been distributed by UBS Saudi Arabia or reviewed and approved by UBS Saudi Arabia if it was issued by UBS Switzerland AG, by UBS AG, or any of its subsidiaries or branches. UBS Switzerland AG is a public company limited by shares, incorporated in Switzerland with its registered offices at Bahnhofstrasse 45, CH-8001 Zurich. UBS Saudi Arabia (a subsidiary of UBS AG) is a Saudi closed joint stock company incorporated in the Kingdom of Saudi Arabia with a paid capital of 110,000,000 Saudi Riyals under commercial register number 1010257812 having its registered office at Laysen Valley, P.O. Box 75724, Riyadh 11588, Kingdom of Saudi Arabia. UBS Saudi Arabia is authorized and regulated by the Capital Market Authority to conduct securities business under license number 08113-37. This document is distributed only under such circumstances as may be permitted by applicable laws and regulations. The information and – if any - opinions contained in this document have been compiled or arrived at based upon information obtained from sources believed to be reliable and in good faith, but is not guaranteed as being accurate, nor is it a complete statement or summary of the securities, markets or developments referred to in the document. All such information and opinions are subject to changes without notice. Past performance of investments (whether simulated or actual) is not necessarily an indicator of future results. Forward looking data is based on estimates that are subject to changes. Should the currency of a financial product or service not match your reference currency, performance may rise or fall due to currency fluctuations. UBS Switzerland AG and / or other members of the UBS Group may have a position in and may make a purchase and/or sale of any of the securities or other financial instruments mentioned in this document While statements that constitute "forward-looking statements", including, but not limited to, statements relating to our future business development represent UBS judgments and future expectations concerning the development of our business, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from our expectations. This document may not be forwarded, reproduced, redistributed or republished for any purpose without the written permission of UBS Saudi Arabia. Source for all data and charts (if not indicated otherwise) is UBS Switzerland AG. **Singapore**: Where applicable, this material is distributed in Singapore by UBS AG, Singapore Branch, which is licensed by the Monetary Authority of Singapore under the Banking Act 1970 to carry on banking business. UBS AG is incorporated in Switzerland with limited liability. UBS AG has a branch registered in Singapore (UEN S98FC5560C). This material has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations (the "FAR")) only. By virtue of your status as an institutional investor, accredited investor, or expert investor, UBS AG is exempted from complying with certain requirements under the Financial Advisers Act 2001 (the "FAA"), the FAR and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which UBS AG may provide to you. These include exemptions from complying with: Section 34 of the FAA (pursuant to Regulation 33(1) of the FAR); Section 36 of the FAA (pursuant to Regulation 34(1) of the FAR); and Section 45 of the FAA (pursuant to Regulation 35(1) of the FAR). Singapore recipients and clients of UBS AG, Singapore Branch should contact UBS AG, Singapore Branch for any matters arising from, or in connection with, this material. Where applicable, this communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete/destroy the communication and Material and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved or endorsed by any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Spain:** This report is distributed in Spain by UBS AG, Sucursal en España, authorized under number 1460 in the Register by the Banco de España. **Sweden**: This publication is not intended to constitute a public offer under Swedish law. Initiation: acting on the demand for cleanrooms

- Key beneficiary of the cleanroom shortage in the high-tech industry
- Fast-growing order backlog likely to be realised over 2026-28E
- Initiating with a Buy (1) rating and a 12-month TP of TWD1,415

neil.teng@daiwacm-cathay.com.tw

Investment case: We initiate coverage of Acter, an established multinational cleanroom engineering, procurement, construction and management (EPCM) turnkey service provider, with a Buy (1) rating. Its core business includes cleanroom electromechanical engineering, water/gas/chemical delivery systems, and other cleanroom services. We believe now is a good time to revisit the stock as it underperformed the TAIEX Index by 32.7% in 3Q26, mainly on weaker-than-expected 2Q26 results and soft sector sentiment. Given its stronger revenue momentum over recent months and upcoming TSMC results on 15 October, which may drive sentiment, we suggest investors to buy the stock. We forecast a 24.6% revenue CAGR and 36.9% net profit CAGR over 2026-28E.

Intact global demand for cleanroom technology, the edge AI market, and rapid cleanroom expansion in Asia further support Acter's order backlog. Its backlog reached TWD66bn in July 2026 vs. TWD46bn in 2025 and TWD30bn in 2022 (15.3% 2022-25 CAGR), which largely outpaced the global cleanroom technology market's forecast CAGR over 2023-2032E, according to Precedence Research.

Strong competitive edge supports order share gains across multiple segments. Acter's competitive edge lies in 1) intelligent management enabled by digital twins and AI, using 3D building information modelling (BIM) and AI-driven digital twin management; 2) intellectualisation of green engineering, which comprises green design, green procurement, and green techniques; 3) experience across multiple industries (ie, data centres and electromechanical engineering for the consumer industry) which supports better integration; and 4) a complete network, enabling on-the-spot support. Acter believes it has the highest market share among the operators of three major US data centre players due largely to its capabilities in liquid cooling and its expertise in electromechanical and cleanroom engineering.

Catalysts: Near-term: project wins from key clients, supporting stronger monthly revenue momentum; mid- to long-term: an improving operating-margin trend and a resilient order backlog.

Valuation: We are the first non-domestic broker to cover Acter. We initiate coverage with a 12-month TP of TWD1,415, based on a target PER of 20x (equivalent to a 0.54x PEG over 2026-28E). We believe our valuation is fair, given Acter's strong earnings visibility, which we believe warrants a rerating. Our TP is supported by a DCF valuation of TWD1,454.

Risks: 1) weaker-than-expected expansion in the semiconductor industry; and 2) project delays or cancellations.

Buy (initiation)

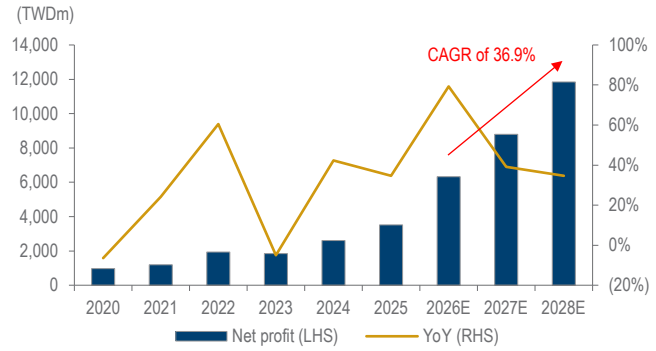
How do we justify our view?

Growth outlook	Valuation	Earnings revisions
✔ ✔ ✔ ✔ ✔	✔ ✔ ✔ ✔ ✔	✔ ✔ ✔ ✔ ✔

Growth outlook

We forecast Acter to record a 36.9% net profit CAGR over 2026-28E, on the back of a 24.6% revenue CAGR over the same period, driven by 1) larger project scale, as strong demand for cleanroom EPCM services from the high-tech sector is likely to support continued growth in Acter's order backlog and 2) improving gross margins and operating efficiency. We expect operating margin to expand by 2.0pp in 2027E and 1.3pp in 2028E, driven by favourable gross margins on new projects and operating leverage.

Acter: net profit and net-profit growth



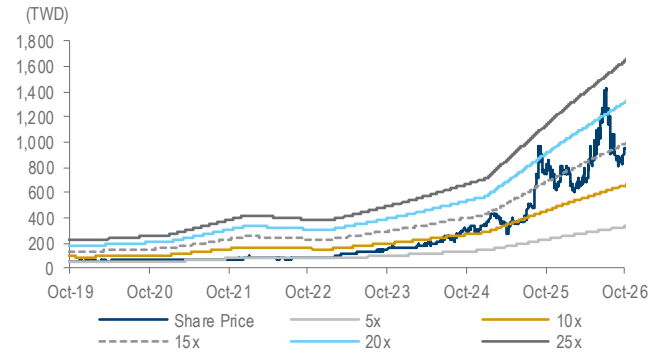
Source: Company, Daiwa forecasts

Valuation

Our 12-month TP of TWD1,415 is based on a target PER of 20x, applied to our 1-year-forward EPS forecast. Our target multiple of 20x is higher than the stock's past-3-year 1-year-forward PER (12.2x) and past-5-year 1-year-forward PER (9.6x) and implies a PEG of 0.54x on our 36.9% net profit CAGR forecast over 2026-28E. We believe the stock deserves a rerating in the next 12 months, largely supported by resilient cleanroom demand globally.

Our TP is also supported by an alternative DCF-derived valuation of TWD1,454/share.

Acter: 1-year-forward PER bands



Source: Bloomberg, Daiwa forecasts

Earnings revisions

Bloomberg consensus EPS estimates for 2026E and 2027E have risen 24.8% and 24.3% YTD, respectively. This is likely due to upward revisions to order backlog and earnings forecasts following better-than-expected industry outlook. We are the first foreign broker to cover Acter.

Source: FactSet, Daiwa forecasts

Company profile

Established in 1979, Acter Group (Acter) is a leading engineering services provider specialising in cleanroom, electromechanical, and high-tech facility integration solutions for semiconductor, optoelectronics, biotech, green energy, and advanced manufacturing clients across Taiwan, China and the rest of the world. As of 2025, its revenue comprised cleanroom electromechanical (71%), water, gas and chemical delivery systems (20%), consumer industry electromechanical (4%), biomedical (2%) and high-tech equipment & materials sales & services (3%).

Acting on the demand for cleanrooms

Why are cleanrooms a bottleneck in the high-tech industry?

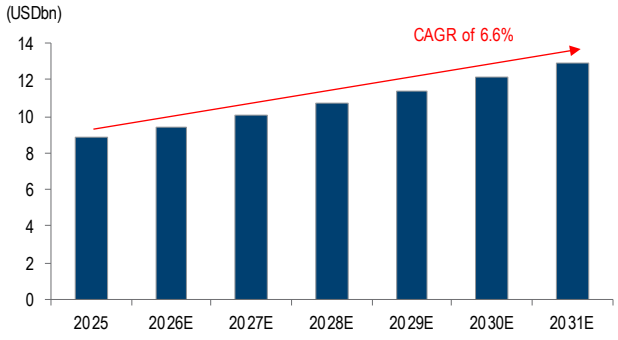
In recent years, cleanrooms have become a critical bottleneck for high-tech industries, especially semiconductor manufacturing, OSAT, AI hardware, and PCB, mainly because of its indispensable nature, severe supply-demand imbalance, labour shortages, and high technical and regulatory barriers.

Cleanrooms are a bottleneck in the high-tech industry, including semiconductor foundry, memory, and electronic assembling

Cleanrooms are an indispensable core infrastructure as they determine product yield and quality stability. Advanced manufacturing nodes in semiconductors, optoelectronics, and biopharmaceuticals require highly particle-free, constant-temperature, and constant-humidity environments to ensure reliable production. As process technologies continue to advance, such as 2nm node (or even newer nodes) and advanced packaging, existing cleanrooms must be rebuilt, and the complexity of building new ones thus increases. This keeps overall demand for cleanrooms at high levels.

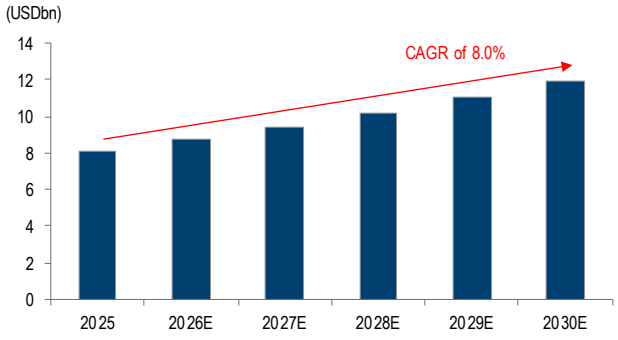
A severe global supply-demand imbalance with demand for cleanroom construction outpacing supply. The surge in AI servers, high-performance computing (HPC), and high-bandwidth memory (HBM) has triggered a global expansion for front-end wafer fabs, packaging and testing facilities, and PCB manufacturing. Order visibility remains extremely strong across the industry. According to Markets and Markets, the global cleanroom market size is set to expand at a CAGR of 6.6% over 2025-31E. At the same time, the global semiconductor cleanroom market size is set to grow at a CAGR of 8.0% over 2025-30E. For instance, Acter's order backlog exceeded TWD66bn at the end of July 2026, up from TWD46bn at the end of 2025, showing the urgency of demand for cleanroom construction.

Global: cleanroom market size and growth



Source: Markets and Markets

Global: semiconductor cleanroom market size and growth



Source: Markets and Markets

Human resources are an additional limitation to capacity growth. Cleanroom engineering is highly technical and labour-intensive, relying on specialised on-site installation and supervision that cannot be replaced by robots. At the same time, the industry faces severe labour shortages and an aging workforce, and younger generations are reluctant to join field operations. Cross-border staff deployment is also less cost-efficient than local hiring.

Cleanrooms involve complex system integration, creating high barriers to entry. A cleanroom construction includes 4 sequential phases, where each phase usually requires totally different areas of expertise. Therefore, the competitive landscape in each area differs. The process begins with **civil & structural (C&S) works** to establish the physical plant, followed by **mechanical, electrical, and plumbing (MEP) works** for essential utility generation, where Acter is one of the leading global experts. After MEP is finished, chemicals/gas/water are then distributed via **main systems** through primary piping network and finally delivered to production equipment through **hook-up systems**. As

global supply chains restructure under N+1 (domestic market + 1) strategies, companies building overseas facilities in places like the US face strict and complicated licensing processes, particularly on fire safety and hazardous chemicals. Without experience dealing with such engineering and safety issues, construction timelines can be severely delayed.

As a result, even with advanced equipment and chip designs, a high-tech company cannot begin production without adequate cleanroom space, skilled engineers, and system-integration capabilities. Therefore, cleanroom engineering contractors hold significant bargaining power and capacity allocation leverage in today's tech supply chain.

IC foundry

In the foundry sector, where the cleanroom supply-demand shortage is the tightest, project activity remains centred on advanced process capacity expansion in Taiwan and Arizona. Simultaneously, domestic advanced node development remains intense, with multi-phase fab builds advancing across Hsinchu, Taichung, and Kaohsiung. Local cleanroom and MEP integration demand is further boosted by advanced packaging facilities in Taiwan (such as Chiayi and Tainan) and upcoming projects in the US are set to contribute revenue for the cleanroom providers in the following years.

Memory

The memory segment is exhibiting robust momentum as well, mainly catalysed by HBM capacity additions. Projects such as the plant in Japan, transitioned to contribution for the cleanroom EPCM providers starting from 2026. In Taiwan, turnkey engineering contracts in Miaoli are also actively underway. This trend is reinforced by stronger-than-expected expansion activity from memory producers in China.

OSAT, PCB and ODM/OEM

For OSAT companies, demand is also surging due to the spill-over effect of advanced packaging protocols and N+1 supply chain restructuring. The OSAT names are expanding their footprint both in Southern Taiwan and in overseas locations including in the US and Southeast Asia. Major engineering contracts signed between OSAT clients and Acter show stable long-term workload for strong cleanroom demand over our forecast horizon. Similarly, overseas expansion for PCB manufacturing is peaking in Southeast Asia, especially in Thailand. We expect Chinese PCB players to also increase their capacity, just like memory companies in the past year. Except for front-end and back-end chip manufacturing, ODM/OEM and data centre infrastructure is also a key growth engine for the EPCM industry. Major Taiwanese ODMs are building production facilities in Texas and Mexico to meet local manufacturing needs. Cleanroom contractors, such as Acter, providing MEP and system integration in Texas are directly benefiting from these projects. The shift toward liquid cooling systems has also increased engineering complexity, favouring few cleanroom companies with the expertise to deliver complex integration for CSPs in both North America and Southeast Asia.

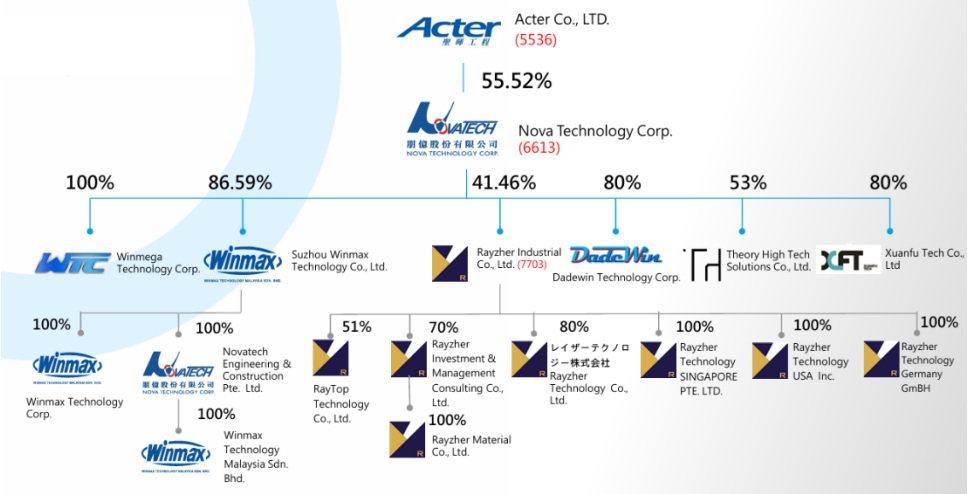
Acter: an integrated cleanroom solutions provider

Acter provides integrated cleanroom solutions via various subsidiaries

Acter Group (Acter), an integrated cleanroom solutions provider, maintains its competitive positioning within the high-tech cleanroom and MEP engineering sector, driven by its group synergy and global footprint. Acter operates as a comprehensive vendor through a group business model. The parent company, Acter, supervises overall cleanroom and MEP services, while subsidiary Nova Technology (Novatech, 6613 TT, not rated) mainly provides chemical primary system and hook-up, and Novatech's subsidiary Rayzher (7703 TT, not rated) provides gas primary system, hook-up and equipment. In China, Acter operates through Acter Technology Integration Group (603163 CH, not rated) and Suzhou Winmax (not listed) for Chinese EPCM (engineering, procurement, construction, and management) and equipment business. Except for C&S (civil and structural) works, where the margin is low (7-8%) and the contract duration is long, Acter's services span nearly the entire cleanroom construction process. Its one-stop solutions model supports customer retention

and improves bid-win rates, particularly for overseas expansion, where customers have few reliable providers to choose from.

Acter: organisational chart



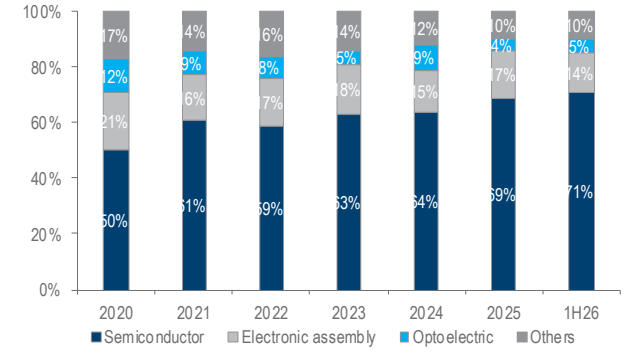
Source: Company, Daiwa

To avoid the risk of over-concentration, Acter diversifies its client portfolio across semiconductor foundries, memory, PCB, OSAT, ODM hardware assembly, CSP data centres and the consumer industry. By sector, semiconductor projects represent the largest share of Acter's portfolio, accounting for 66% of total revenue in 1H26, vs. 69% in 2025. Foundry manufacturing is the largest source of demand for cleanrooms in Taiwan, especially as advanced-node capacity expands at sites in Hsinchu, Taichung and Kaohsiung. In the memory segment, the company executes turnkey engineering builds to expand its capacity aggressively, creating cleanroom opportunities across Taiwan, Japan and Singapore. This multi-sector coverage decreases the risk of cyclical downturns in any individual segment, in our view.

Acter provides cleanroom services for numerous industries, across multiple regions

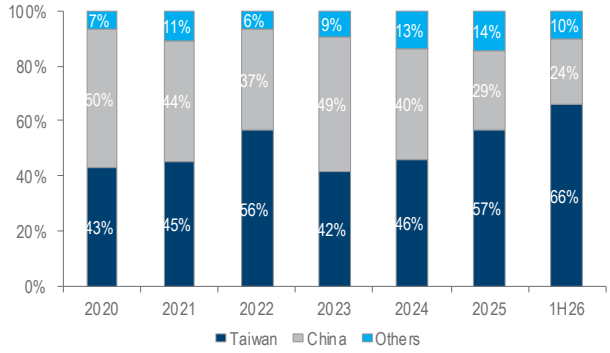
By establishing 33 operating entities across 11 international regions, the company effectively captures capex migration driven by global N+1 supply chain diversification. This allows Acter to support Taiwanese and international clients as they expand manufacturing capacity from Taiwan into Southeast Asia, Japan and the US. Due to the complexity of advanced-node IC manufacturing, packaging and testing, it is especially important for these Taiwanese semiconductor companies to work with familiar cleanroom builders when expanding in the US. This is one of the reasons why Taiwanese cleanroom companies are receiving overseas orders and starting to set up global bases, in our view. Despite higher management, material, and manpower costs in the US, most cleanroom companies are benefitting from the trend by improving margins, given the higher complexity and risks to operate overseas. Across overseas hubs in Texas and Phoenix (expected to begin from 2027), Acter prioritises local hiring and partners with regional civil contractors to shorten the learning curve and to avoid the high overhead. To further address the potential labour shortages in the future, the company has established cross-border academic and vocational partnerships to bring Southeast Asian talent to Taiwan for technical training before deploying them back to their home markets, securing future human capacity to support global expansion projects.

Acter: revenue by clients' industry



Source: Company, Daiwa

Acter: revenue by geography

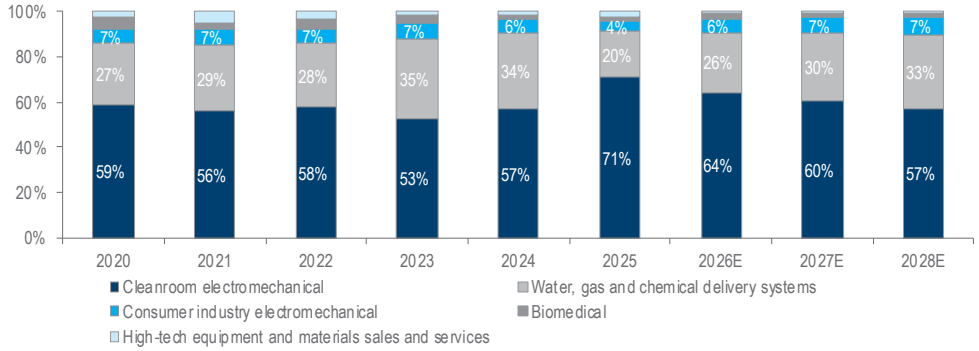


Source: Company, Daiwa

Semiconductor-related business in Taiwan is the major revenue stream for Acter

By product, cleanroom electromechanical services remain Acter's largest source of revenue (accounting for 66% of 1H26 revenue, per the company). These services include cleanroom architectural and MEP engineering, which powers airflow, filtration, environmental regulation and utility controls. Water, gas and chemical delivery systems are its second-largest source of revenue (accounting for 24% of 1H26 revenue, per the company). Contributed mainly by Novatech (6613 TT, not rated) and Rayzher (7703 TT, not rated), these services cover the main systems and hook-up systems, for ultra-pure water (UPW), specialty gases, chemical piping, etc., all of which require highly precise build-up work. Except for cleanroom electromechanical and water, gas and chemical delivery systems, the rest of Acter's revenue comes from the consumer industry services electromechanical (5%), biomedical (3%), and high-tech equipment and materials sales and services (1%).

Acter: revenue by product



Source: Company, Daiwa

Technically, Acter integrates digital transformation and green engineering into its business model, helping it differentiate from peers. Acter deploys digital twin technology and 1:1 3D BIM modelling to detect piping interferences and optimise spatial layout before installation, minimising schedule delays. This makes Acter a more reliable option, in our view, and thus being a favourable supplier, especially for the semiconductor clients that have extremely high quality and swiftness criterion.

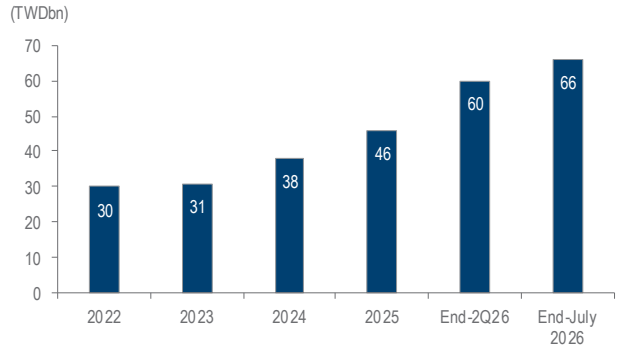
Bright outlook: strong order visibility

Rising orders on hand due to supply-demand imbalance for cleanrooms

Acter's order backlog has increased from TWD55bn in 1Q26 to TWD60bn in 2Q26 and TWD66bn in July 2026. We expect this figure to further increase in the following quarters, given the supply-demand imbalance in the cleanroom sector. This is composed of semiconductor (63%), electronic assembly (11%), consumer (9%) and others (17%), per the company. In 2H25, the company accelerated the digestion of small-scale projects below TWD1bn, and, as a result, starting from 1H26, it successfully shifted its project

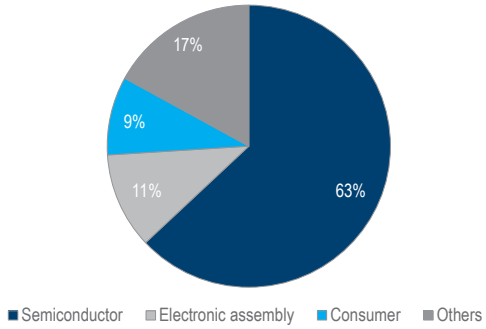
selection strategy to focus on large-scale projects valued at TWD1bn or above while reducing smaller contracts. This drives the growth in top-line.

Acter: order backlog



Source: Company, Daiwa

Acter: order backlog by clients' industry



Source: Company, Daiwa

OSAT customers have large order backlogs with Acter, which should drive future growth for the company

Back-end packaging, cloud infrastructure and hardware assembly are additional growth drivers. Acter serves as a contractor for both Taiwanese and overseas OSAT providers, including TWD21.7bn contracts YTD, awarded by a major OSAT client vs. TWD16.6bn contract obtained from the same client in 2025. In cloud infrastructure, Acter maintains qualified supplier status with US CSPs, providing mechanical, electrical and plumbing (MEP) integration, especially for those data centres that implement liquid-cooling systems. The company also wins factory construction projects for Taiwanese ODMs across the US and Southeast Asia, as well as PCB facility projects in Thailand and China. Non-tech sectors, including biotechnology, commercial buildings, smart logistics hubs and medical facilities, comprise 9% of the total backlog, per management.

Competitive advantages

High entry barriers to the segment

Comprehensive product portfolio, empowered by subsidiaries

The supply of cleanroom services is limited due to high entry barriers in the segment

Acter provides a one-stop EPCM solution, leveraging its subsidiaries to deliver complete solutions. Within the group, the parent company Acter focuses on overall cleanroom and MEP system integration; subsidiary Novatech provides primary chemical systems and hook-up systems; and sub-subsidiary Rayzer specialises in primary specialty-gas systems and hook-up systems. In China, Suzhou Winmax, also a subsidiary of Novatech, focuses on the supply of wet processing and chemical handling equipment. This integrated model covers cleanroom engineering integration, water, power, chemical and gas-utility systems, as well as post-completion validation and maintenance, ensuring cross-system compatibility while mitigating risks associated with multi-contractor hiring.

Under global supply chain diversification trends, this unified group strategy strengthens order-winning capabilities in overseas markets. Clients expanding internationally face regulatory, linguistic and supply-chain complexities, favouring partners that offer one-stop services with a proven cross-border track record.

A diverse client base helps Acter weather economic cycles

Acter's main competitive advantage is its diversification of clients by industry and region. This guides the company through the peaks and troughs of the economy, which is especially crucial given the strong cyclicality of the semiconductor/high-tech industry. Acter serves a broad client base across semiconductors, OSAT, PCB, electronics assembly (ODM), CSP data centres, biopharmaceuticals and even the consumer industry (including commercial real estate and logistics), whereas many peers rely on a few large foundry clients. When semiconductor demand slows, capacity expansion in the PCB or data centre sectors offset the decline. Additionally, Acter avoids concentration risk and margin compression from major foundry accounts, as projects from leading foundries yield lower margins; by serving niche markets like US-based CSPs, the company achieves higher gross margins.

Geographically, Acter operates across Taiwan, China, Southeast Asia, the US and other countries. The company has OSAT and foundry customers in Taiwan and China, PCB clients expanding into Thailand, and ODM and data centre clients establishing operations in the US. Across different countries, local hiring and local supply chain implementation can further reduce costs and increase efficiency relative to peers reliant on a cross-border labour force.

Labour shortages

Amid global labour shortages, Acter minimises the operational impact and turns workforce constraints into a moat through localised talent development. Since engineering labour cannot easily be automated, Acter has built a cross-border talent pipeline via industry-academia partnerships. The company recruits Southeast Asian students for specialised M&E engineering training in Taiwan, deploying them to global project sites after their graduation to solve labour bottlenecks. This structure maintains an engineering team with an average tenure of more than 7 years, creating an operational barrier in an industry with a high employee turnover rate.

Compared with peers relying on high-cost personnel sent from Taiwan, we note that Acter's local hiring strategy creates cost and efficiency advantages. Prioritising compliant local hiring across overseas markets reduces travel expenses while accelerating integration with local supply chains and regulations. Localised teams also handle post-completion services and technical support directly on-site, building long-term client trust in overseas markets.

Numerous competitors, each with different specialisation

Some competitors, unlike Acter, lack a diversified client base

Acter faces different competitors across its main product lines. In the EPCM segment, including cleanroom and MEP works, key competitors include UIS (2404 TT, not rated), L&K (6139 TT, not rated), Yankey (6691 TT, not rated) and Jiuhan (6903 TT, not rated). Despite having business models similar to Acter, UIS, Yankey and Jiuhan focus more on major semiconductor players in both Taiwan and the US, and L&K concentrates on ASEAN semiconductor projects. In the equipment/material sales and agency space, Acter mainly competes with Marketech (6196 TT, not rated). In the water, gas and chemical delivery systems area, through Novatech and Rayzher, Acter group competes with Marketech, Mega Union (6944 TT, not rated), Taiwan Puritic (6826 TT, not rated), Trusval (6667 TT, not rated) and Cica-Huntek (6725 TT, not rated).

In our view, despite the competitive environment, Acter maintains a formidable competitive moat built on several key advantages. We attribute this to its more than 45 year experience in the industry, enabling it to develop specialised expertise that is hard for competitors to replicate.

Acter: peer comparison (cleanroom related)

Financial analysis

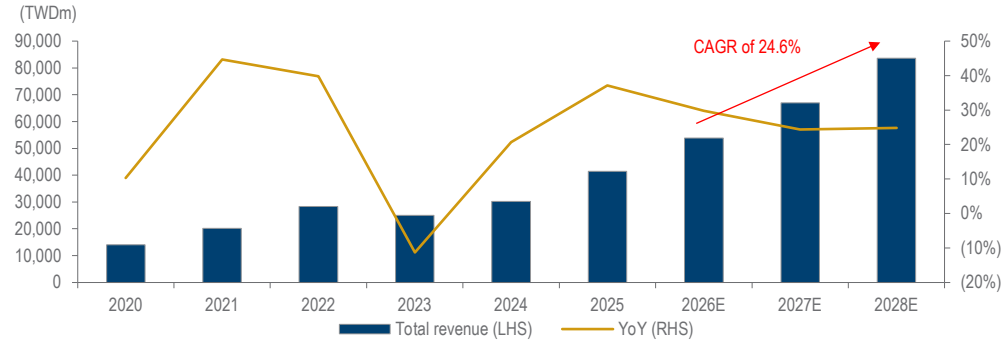
We forecast the company's net profit to rise at a CAGR of 36.9% over 2026-28E, driven by a revenue CAGR of 24.6% due to surging demand from the high-tech industry (an increase in the order backlog to TWD66bn at the end of July 2026 vs. TWD46bn at end-2025) and a 3.3pp expansion in operating margin over 2026-28E, driven by the gross margin improvement from more favourable project wins and operating leverage.

Strong order visibility, with revenue expected to grow across all sectors over 2026-28E

We forecast Acter's revenue to record a CAGR of 24.6% over 2026-28E

We forecast Acter's revenue to increase at a CAGR of 24.6% over 2026-28E, driven by scale expansion and a growing demand from various industries, including semiconductor, electronic assembly, optoelectronics and others.

Acter: revenue growth trend



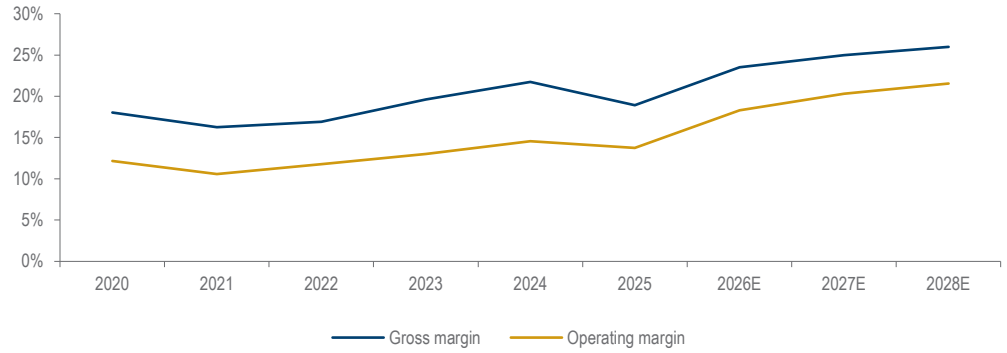
Source: Company, Daiwa forecasts

Gross- and operating-margin expansion trend

We forecast an upward operating-margin trend over 2026-28E

Over 2026-28E, we forecast Acter's gross and operating margins to expand on rising revenue scale and a higher complexity of cleanrooms for advanced manufacturing. We note that the gross margin from high-tech cleanrooms is higher than that from consumer industries, such as commercial buildings and biopharmaceuticals. Thus, we estimate the company's gross margin to reach 26.0% in 2028E from 18.9% in 2025 and its operating margin to reach 21.6% in 2028E from 13.7% in 2025.

Acter: gross- and operating-margin trend



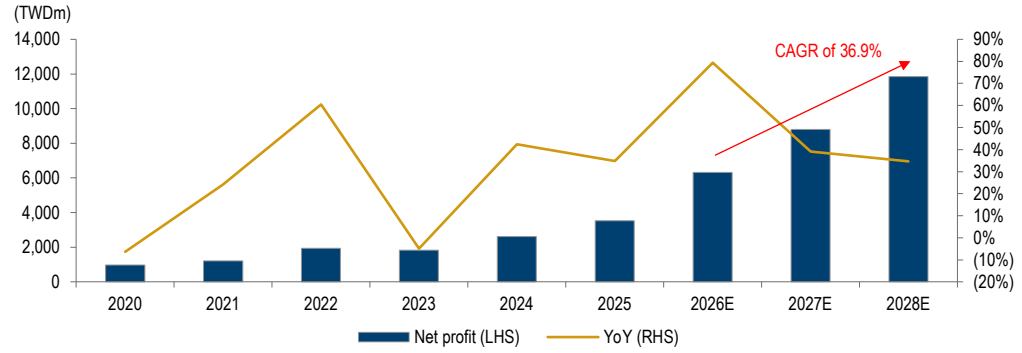
Source: Company, Daiwa forecasts

Net margin likely to rise over 2026-28E

We forecast a net profit CAGR of 36.9% for Acter over 2026-28E

We forecast Acter's net profit to rise to TWD8,797m in 2027E and TWD11,851m in 2028E (from TWD6,325m in 2026E). We expect its net margin to come in at 13.1% in 2027E and 14.2% in 2028E (vs. 11.7% in 2026E) and for its net profit to grow at a CAGR of 36.9% over 2026-28E.

Acter: net profit trend



Source: Company, Daiwa forecasts

Intact demand to support revenue growth over our forecast horizon; ROE expansion underway

We expect stronger cash balances and FCF over 2026-28E due to better profitability

We forecast Acter's total cash and equivalents to reach TWD16,838m (36.8% of its total assets) in 2026E and increase to TWD27,839m in 2028E (42.8% of total assets) with net cash likely to come in at TWD16,244m in 2026E and TWD27,245m in 2028E.

After factoring in our 2027 and 2028 capex assumptions of TWD180m, we expect Acter's free cash flow (FCF) to improve to TWD12,129m in 2028E, from TWD5,763m in 2026E. We believe the capacity expansion cost will initially be low and that the company will continue to benefit from the better profitability.

Strong ROE outlook over 2026-28E

We expect Acter's ROE to improve to a record-high of 56.8% in 2028E from 29.3% in 2025 (following steady annual increases to 46.8% in 2026E and 54.9% in 2027E), which we attribute to margin expansion from the revenue size increase and gross margin expansion led by increases in cleanroom complexity.

Acter: ROAE and ROAA trend

Valuation and risks

Undemanding valuation, alongside its leading global positions in the OSAT and memory segments and an optimistic industry outlook

12-month TP of TWD1,415, based on a target PER of 20x

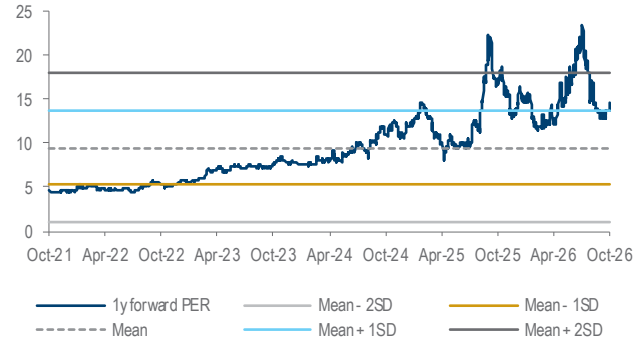
We initiate coverage of Acter with a Buy (1) rating and 12-month TP of TWD1,415, based on a target PER of 20x applied to our one-year-forward EPS forecast. This target multiple is higher than the average of its past-3-year 1-year-forward PER of 12.2x (ranged from 7.4x to 23.5x) and the average of its past-5-year 1-year-forward PER of 9.6x (ranged from 4.4x to 23.5x), which we view as undemanding as we forecast a 36.9% net profit CAGR over 2026-28E, implying a 0.54x PEG. This is supported by its business expansion in the next 2-3 years. We see potential for a rerating of the stock, given Acter's global leadership in cleanroom EPCM, particularly in the OSAT and memory industries.

The stock is trading currently at a 15.8x 1-year-forward PER vs. its earnings CAGR of 36.9% over 2026-28E, translating to a 0.43x PEG ratio. Its share price has underperformed TAIEX Index by 32.7% in 3Q26, mainly due to its weaker-than-expected 2Q26 results. However, given the potential improvement in sector sentiment following TSMC's results on 15 October 2026, along with the likelihood that Acter's revenue momentum will strengthen in the coming months, we recommend that investors buy the stock.

Acter: past-3-year-forward PER (average: 12.0x)

Source: Bloomberg, Daiwa estimates

Acter: past-5-year-forward PER (average: 9.5x)



Source: Bloomberg, Daiwa estimates

We compare Acter with other leading cleanroom EPCM companies such as UIS (2404 TT, TWD1,330.0, not rated), L&K (6139 TT, TWD787.0, not rated) and Yankey (6691 TT, TWD776.0, not rated). UIS, L&K and Yankey are trading at a PER of 14.7x (earnings CAGR of 40.7% over 2025-27E), 9.5x (earnings CAGR of 36.9% over 2026-28E) and 15.1x (earnings CAGR of 53.6% over 2025-27E), on their 1-year-forward EPS, respectively.

Stronger earnings growth outlook and more room to grow vs. peers

Acter's peers are trading at 18.7x for 2026E and 14.2x for 2027E. We forecast Acter to deliver an EPS CAGR of 36.9% over 2026-28E vs. 31.5% CAGR for the segment over the same period.

We believe our target one-year-forward PER of 20x (equivalent to a 0.54x PEG using 2026-28E EPS CAGR) is undemanding as: **1) Acter is ramping up capacity to meet growing demand from high-tech customers and is in an expansion cycle;** and **2) its leading position among OSAT and memory clients warrants a valuation premium, compared to its global peers**.

Our 12-month TP of TWD1,415 is also supported by our DCF valuation

We also reference a DCF methodology (see charts below), which indicates a DCF-derived fair value estimate of TWD1,454/share, which supports our 12-month TP of TWD1,415.

In our DCF calculation, we apply a WACC of 19.3% to Acter's FCF over 2026-35E and a terminal growth rate of 7.0% thereafter. We expect the company to continue to record steadily increasing FCF over 2026-35E.

Risks to our call

Primary/key risks:

Weaker-than-expected expansion in semiconductor industry

The biggest downside risk to our call for Acter is weaker-than-expected expansion from semiconductor clients, especially in advanced-node foundries, advanced packaging and OSAT. If global demand for AI servers, HPC or HBM slows, or if clients delay fab build-ups and overseas expansion plans, it will directly pressure order inflows and backlog conversion for Acter.

Project execution delays or cancellations

Acter's revenue recognition is tied to large, complex EPCM and integrated engineering projects, which are often subject to customer-driven delays. Any postponement in project

schedule, construction bottlenecks or cancellation of large projects could defer revenue recognition and hurt overall profit. This risk is more obvious in overseas projects, where licensing, fire-safety approvals and hazardous-chemical regulations are more complicated.

Key risks to our call: weaker-than-expected expansion in semiconductor industry, project delays or cancellations, and higher-than-expected raw-material price hikes

Higher-than-expected raw-material price hikes

Raw-material costs (especially copper and oil-related costs) account for 50-60% of COGS and thus the price volatility makes costs difficult to manage. Acter needs to maintain supplier relations, negotiate appropriate price-adjustment mechanisms with clients, and invest in R&D to identify composite material substitutes, thereby reducing reliance on any single component.

Secondary risks:

Labour issues or larger-than-expected increases in labour costs

Cleanroom engineering is highly labour-intensive and relies on on-site installation and supervision. Although Acter has built a local hiring and talent-development model, a larger-than-expected shortage of engineers or rising wage pressure could still raise costs and constrain capacity expansion. Any inability to secure enough skilled labour may also limit the company's ability to convert orders into revenue in time.

Margin pressure from lower-margin projects or mix shift

Acter's business mix includes a few low-margin C&S services as well as larger EPCM and system integration contracts. If the company takes on a higher proportion of lower-margin projects, or if competition intensifies in certain geographies or customer segments, gross margin could come under pressure. In addition, an unfavourable product mix shift towards less profitable work could offset benefits from backlog growth.

Overseas expansion and regulatory risks

Acter is expanding across markets in the US, Southeast Asia, Japan and China, which exposes it to FX movements, local compliance requirements, tax complexity and regulatory uncertainty. Delays in licensing, changes in safety standards or local-content requirements could increase project costs and reduce execution efficiency. Any misstep in managing overseas operations could damage profitability and client retention.

Appendix

Company background

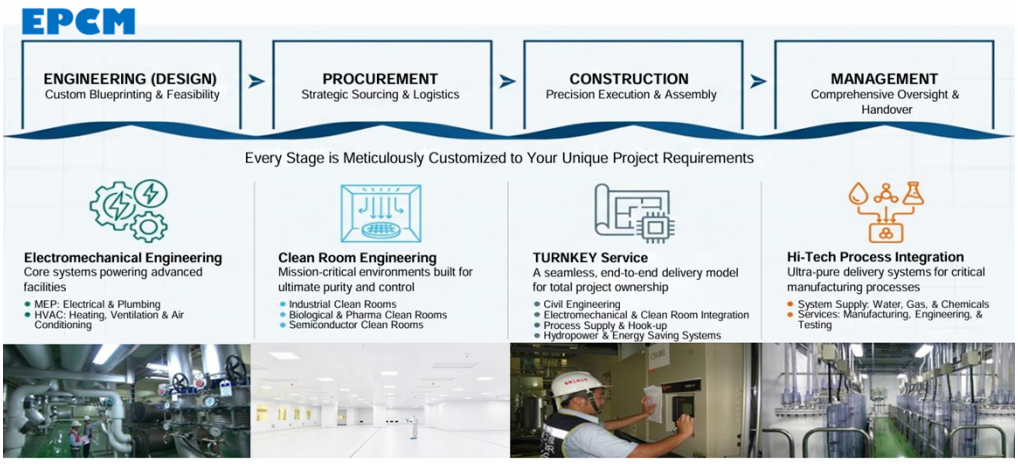
History

Comprehensive cleanroom EPCM provider in Taiwan; dominates both high-tech market and consumer industry

Acter (5536 TT), founded in 1979 and headquartered in Taichung, Taiwan, is a cleanroom EPCM provider with over four decades of experience. Starting with early mechanical and electrical (M&E) engineering through vertical and horizontal integration, Acter has now developed into an engineering technology group with cross-border execution capabilities. A cleanroom building process begins with **civil & structural (C&S) works** to establish the physical plant, followed by **mechanical, electrical, and plumbing (MEP) works** for essential utility generation, where Acter is one of the experts. After MEP is finished, chemicals/gas/water are then distributed via main systems **through primary piping networks**, and finally delivered to production equipment through **hook-up systems**. The company's core competency is providing one-stop integrated total solutions, spanning services, primary piping networks and hook-up systems, leaving C&S services to other engineering peers, given the nature of the latter segment's low margin and long timespan.

In terms of business model, Acter delivers EPCM (Engineering, Procurement, Construction, Management) capabilities. From initial customised planning and feasibility assessments to strategic procurement, installation, and post-completion maintenance, Acter builds production environments tailored to client process requirements.

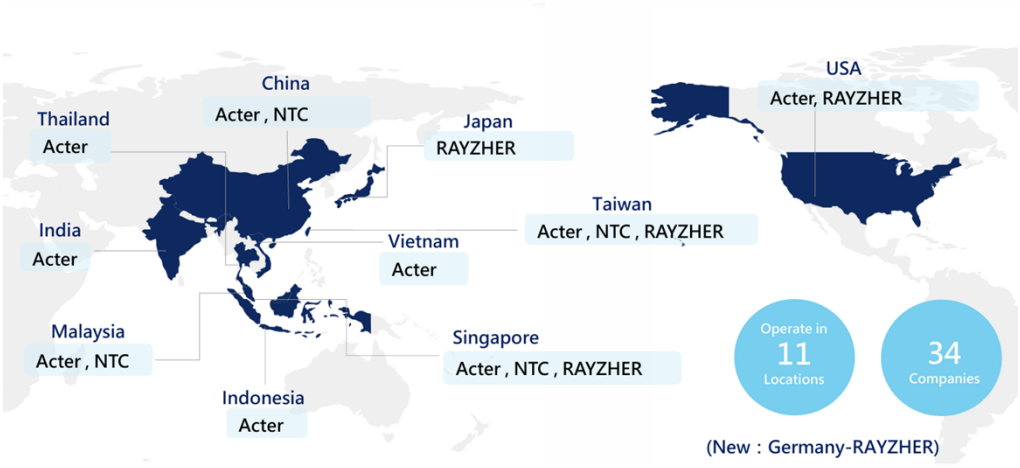
Acter: EPCM solutions offered



Source: Company, Daiwa

Regarding global expansion, Acter actively responds to the global supply chain's "N+1" strategy, operating across 11 regions with 33 companies globally. Its service network spans Taiwan, China, Southeast Asia (including Thailand, Malaysia, Vietnam, Indonesia, and Singapore), Japan, India, and the US. The company leverages a group synergy strategy by integrating resources from key subsidiaries – such as Novatech (6613 TT, not rated; provides chemical primary and hook-up systems), Rayzher (7703 TT, not rated; provides special gas primary and hook-up supply systems), and Acter Group (603163 CH, not rated; provides cleanroom engineering in China) – to form a complete technical ecosystem, ensuring cross-border capability and quality.

Acter: global footprint



Source: Company, Daiwa

In 2Q26, Acter classified revenue as: cleanroom electromechanical (63%), water, gas and chemical delivery systems (28%), consumer industry electromechanical (6%), biomedical (2%) and high-tech equipment & materials sales & services (1%). In 2025, the product mix was: cleanroom electromechanical (71%), water, gas and chemical delivery systems (20%), consumer industry electromechanical (4%), biomedical (2%) and high-tech equipment & materials sales & services (3%).

Young, capable human resource is a crucial asset for Acter

Acter serves a diversified client base divided into high-tech and consumer divisions. The high-tech division focuses on advanced sectors including semiconductors, OSAT, PCB, AI data centres (for CSPs), and electronics assembly. The consumer division extends into healthcare, premium commercial properties, logistics facilities, and green engineering. This multi-industry strategy allows the company to capitalise on tech sector upgrades while maintaining resilient operations across technology (especially semiconductor) cycles.

Acter adopts a management strategy involving local hiring in overseas markets, prioritising collaboration with local supply chains and compliance with local regulations to reduce cross-border deployment costs and thus build strong local teams. Acter has more than 2,600 employees worldwide (average age: 42 years; average length of service: 7 years). With more than 45 years of experience in EPCM, the company plays a reliable role for both high-tech and consumer industry.

Acter: number of employees

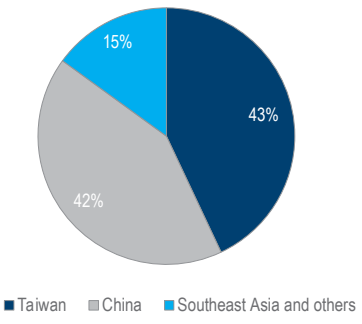
Acter: location of employees (as of June 2026)



Source: Company, Daiwa

Furthermore, Acter integrates ESG sustainability into its core corporate identity and technological innovation. As a green engineering provider, the company develops energy-saving construction methods, digital twins, ice-storage energy conservation, wastewater recycling, and AI smart facility management systems to help clients achieve carbon neutrality while expanding capacity. Backed by solid corporate governance, Acter

Acter integrates ESG capabilities into its core corporate value

consistently ranks among the top performers in Taiwan's corporate governance evaluations, maintaining a stable dividend payout policy and strong ROE as one of the leading facility engineering vendors.

Acter: management team (according to 2025 annual report)

Management	Position	Background and experience

Glossary of terms

EPCM (engineering, procurement, construction, and management): Cleanroom construction services that cover the whole process including project design, purchasing, construction and management.

BIM (building information modelling): A digital modelling system of a building and its key information used in cleanroom construction.

C&S (civil & structural): Site infrastructure and the design and construction of load-bearing elements.

MEP (mechanical, electrical, and plumbing): Building essential systems for environment control, power, lighting, water, and drainage.

ESG analysis

ESG risks

Risks		Management	Analyst comments
G	Executive/board quality	1	Acter maintains a structured governance framework that supports disciplined management. The chairman is Chin-Li Liang. The company operates with defined responsibility across the board, management, cyber security oversight, operations, and audit functions. It has established an organisation function led by the President, a Chief Cyber Security Officer, a Response Team, an Operations and Policy Enforcement Team, and an Audit Team to supervise policy execution and review security implementation.
	Capital management	1	Acter manages capital in a stable and shareholder-friendly manner. Over the past several years, Acter has typically maintained a dividend payout ratio of 65-80%. It also maintains a strong financing network across multiple banks, supporting flexibility for project execution and expansion while preserving financial stability.
	Related party & transaction	1	Acter's business is supported by a transparent network of suppliers, project partners, and financial counterparties, including companies with equity ties and reciprocal business relationships that are common in its operating ecosystem. These relationships are managed through formal internal procedures for fund lending, endorsements and guarantees, and asset acquisition and disposal, all of which are approved through shareholder mechanisms and company rules. Such a structure helps keep inter-company and supply-chain transactions organised and traceable, reducing the risk of unclear dealings.
E	Product quality & safety	1	Acter executes its projects through a complete, disciplined process covering bidding assessment, project planning, design, procurement, construction management, verification and testing, completion and acceptance, closing review, and warranty service. Its cleanroom and electromechanical engineering business is built around maintaining temperature, humidity, and dust-free environments that support high-precision manufacturing. The company strengthens quality control through BIM, Revit, simulation software, ISO drawing output tools, and automated modeling, which improve design accuracy, construction efficiency, and project consistency.
E	Ecological impacts	1	Acter has built a concrete sustainability programme with measurable environmental outcomes. The company completed Scope 1, 2, and 3 greenhouse gas emissions calculation, obtained third-party verification under ISO 14064-1:2018, and publicly disclosed energy consumption and emissions data. It also implemented a strong waste reduction programme, achieving a 95% wastepaper recycling rate at headquarters in 2025 and 100% paper recycling at the 19F and 20F floors after establishing paper segregation and reuse procedures. The company also promoted sustainability measures through emissions inventory management, environmental disclosures, and resource-efficiency practices. These actions show active environmental management and a clear commitment to lowering operational impact.
	Health & safety		

Note: Management score represents a company's ability to manage/benefit from certain ESG topics. The scores range from 1 to 3, with 1 being the strongest.

Bahrain

This research material is distributed in Bahrain by Daiwa Capital Markets Europe Limited, Bahrain Branch, regulated by The Central Bank of Bahrain and holds Investment Business Firm – Category 2 license and having its official place of business at the Bahrain World Trade Centre, South Tower, 7th floor, P.O. Box 30069, Manama, Kingdom of Bahrain. Tel No. +973 17534452 Fax No. +973 535113

United States

This research is distributed into the United States directly by Daiwa Capital Markets Hong Kong Limited (DCMHK) and in certain cases indirectly by Daiwa Capital Markets America Inc. (DCMA), a U.S. Securities and Exchange Commission registered broker-dealer and FINRA member firm, exclusively to "major U.S. institutional investors", as defined under Rule 15a-6 promulgated under the U.S. Securities Exchange Act of 1934, as amended, and as interpreted by the staff of the U.S. Securities and Exchange Commission (SEC). Where this is co-branded research published by Daiwa's partners in collaboration with other parties not affiliated with Daiwa, this research is distributed in the United States by DCMHK only. This report is not an offer to sell or the solicitation of any offer to buy securities. U.S. customers wishing to effect transactions in any designated investment discussed in this report should do so through a qualified salesperson of DCMA. Non-U.S. customers wishing to effect transactions in any designated investment discussed in this report should contact a Daiwa entity in their local jurisdiction. The securities or other investment products discussed in this report may not be eligible for sale in some jurisdictions.

Analysts employed outside the U.S., as specifically indicated elsewhere in this report, are not registered as research analysts with FINRA. These analysts may not be associated persons of DCMA, and therefore may not be subject to FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Japan - Notification items pursuant to Article 37 of the Financial Instruments and Exchange Law

(This Notification is only applicable to where report is distributed by Daiwa Securities Co. Ltd.)

If you decide to enter into a business arrangement with our company based on the information described in this report, we ask you to pay close attention to the following items.

- In addition to the purchase price of a financial instrument, our company will collect a trading commission* for each transaction as agreed beforehand with you. Since commissions may be included in the purchase price or may not be charged for certain transactions, we recommend that you confirm the commission for each transaction. In some cases, our company also may charge a maximum of ¥2 million per year as a standing proxy fee for our deposit of your securities, if you are a non-resident.
- For derivative and margin transactions etc., our company may require collateral or margin requirements in accordance with an agreement made beforehand with you. Ordinarily in such cases, the amount of the transaction will be in excess of the required collateral or margin requirements**.
- There is a risk that you will incur losses on your transactions due to changes in the market price of financial instruments based on fluctuations in interest rates, exchange rates, stock prices, real estate prices, commodity prices, and others. In addition, depending on the content of the transaction, the loss could exceed the amount of the collateral or margin requirements.
- There may be a difference between bid price etc. and ask price etc. of OTC derivatives handled by our company.
- Before engaging in any trading, please thoroughly confirm accounting and tax treatments regarding your trading in financial instruments with such experts as certified public accountants.

* The amount of the trading commission cannot be stated here in advance because it will be determined between our company and you based on current market conditions and the content of each transaction etc.

** The ratio of margin requirements etc. to the amount of the transaction cannot be stated here in advance because it will be determined between our company and you based on current market conditions and the content of each transaction etc.

When making an actual transaction, please be sure to carefully read the materials presented to you prior to the execution of agreement, and to take responsibility for your own decisions regarding the signing of the agreement with our company.

國泰期貨 國泰證券子公司

產業更新 – 國防軍工產業

無人機、無人艇兵分二路，無人載具供應鏈蓄勢

What's New – 國防預算持續提高，六年編列 2,400 億元

2026 年國防總支出規劃達 9,495 億元，2027 年行政院總預算案進一步提高至 1 兆 1,225 億元，年增約 18%，後續待立法院審議。《強化國防自主暨無人載具產業發展條例》規劃六年編列 2,400 億元，每年以 400 億元為原則，支持可信任供應鏈、研發及測試能力建置。此外，行政院提出 1,457 億元國防追加預算，其中濱海監偵型、濱海攻擊型無人機及小型自殺無人艇合計 559 億元，盼於預算通過後加快採購，於 2027 年形成初始戰力。隨政策需求逐步落實，國內軍工供應鏈將由樣機開發與測試，進一步朝產線建置、零組件穩定供貨及批量交付發展。

Trends/Outlook – 無人載具供應鏈蓄勢，持續性發展可期

台灣無人機需求將沿低成本大量部署與高階情監偵兩條路線發展。前者重視採購成本、生產速度與快速補充能力，帶動模組化設計及共用零組件需求；後者強調長航時、感測品質與穩定資料鏈，商機涵蓋機體、光電酬載、導控系統及後勤服務。反無人機系統則由單一干擾設備走向多感測器、指揮控制與反制手段整合，跨品牌相容性、場域驗證及持續更新能力將成為競爭重點。無人艇方面，產業價值由船體製造延伸至自主航行、通信及任務酬載，台海風浪環境亦提高海試與可靠度驗證的重要性。研究部認為，隨部署規模擴大，具備系統整合、穩定交付及長期維保能力的業者，有機會建立持續性收入來源。

Investment Summary

1. 長榮航太(2645 TT)以軍用商規艦載監偵無人機切入市場，延伸航太製造與品質管理優勢；漢翔(2634 TT)與 Shield AI 合作，以 V-BAT 垂直起降無人機取得海巡案，後續可望拓展在地整合、維保及新增採購需求。創泓科技(7714 TT)布局 C2 無人機防禦系統與 Sentrycs 反無人機方案，商機涵蓋設備供應、偵測反制及指揮控制整合，後續關注標案導入與服務收入成長。
2. 台船(2208 TT)的「奮進魔鬼魚」採三體船與模組化酬載設計，並透過與 Havoc 合作布局自主水面載具；龍德造船(6753 TT)的「黑潮」以高速操縱與匿蹤設計為特色，結合既有軍用小型船建造經驗，爭取量產與後勤需求。研究部對台灣軍工產業中期發展持正面看法，後續隨預算、採購及產品驗證逐步落實，相關業者有望將技術與製造能力轉化為實質營運成長。

國泰期貨 國泰證券子公司

從預算增加到產線擴張，台灣軍工迎來新一輪成長

過去十年，台灣國防支出的成長，逐步為軍工產業累積更大的發展空間。如今隨著無人機、無人艇及反制系統成為國防重點，這股需求正從大型軍備採購，延伸至電子、航太與造船供應鏈。以廣義國防總支出觀察，2026 年原規劃規模達 9,495 億元，若將其分為年度預算與特別預算兩類，年度預算含基金約 7,627 億元，特別預算約 1,868 億元。年度預算支撐人員、裝備維持與持續性軍事投資，特別預算則加快重點裝備籌獲，兩者共同擴大產業需求。行政院先前也通過的 2027 年總預算案，進一步將廣義國防總支出推升至 1 兆 1,225 億元，較 2026 年原規劃增加約 18%，目前送至立法院審議，仍待後續觀察。

資料來源：行政院主計處、國防部、國泰證期研究部整理

六年 2,400 億元，行政院再提無人載具追加預算

如果說國防預算擴張為產業打開市場，無人載具專法則讓企業看見更長期的投入方向。9 月行政院副署的《強化國防自主暨無人載具產業發展條例》，要求循年度預算程序，連續六年編列 2,400 億元，每年以 400 億元為原則，必要時可依需求增編。政策範圍涵蓋可信任供應鏈、研發與測試場域，也將資源引導至具實質技術及製造能力的業者，讓國防採購同時成為產業升級的推力。此外，行政院也提出的 1,457 億元國防追加預算，其中「濱海監偵型」、「濱海攻擊型無人機」及「小型自殺無人艇」三項合計 559 億元。國防部已完成招商說明，希望在預算通過後加快採購，於 2027 年形成初始戰力。換句話說，產業正走到從樣機、測試走向批量交付的關鍵階段：無人機廠需要準備產線，零組件供應商需要建立穩定供貨能力，系統整合商則必須完成通信、控制與任務酬載的驗證。後續追加案等待立法院三讀。

國內無人機需求轉向大量部署及偵察視野延伸

烏克蘭讓產業看見小型無人機也能改變軍事裝備的需求結構。當無人機從少數專業單位的裝備，成為前線頻繁使用、需要持續補充的工具，產業競爭也開始從單架性能，延伸至生產速度、成本控制與快速改版。台灣正沿著這條路徑前進：政府已透過前幾年軍用商規無人機採購累積量產經驗，9 月經濟部亦公布中光電相關平台已完成軍用商規量產交付，顯示國內供應鏈逐步跨過展示與驗證階段。未來市場將形成兩條並行的成長路線。

1. **低成本、大量部署型無人機**，重點在可負擔的採購成本、穩定補充能力與持續更新；烏克蘭常見的 FPV(第一人稱視角)機型，即展現這類需求的規模潛力。台灣的濱海任務還需要兼顧飛行距離、海島環境與可信任供應鏈，因此，共用零組件、模組化設計及多家供應，將是逐步降低成本的重要方向。

2. **高階情監偵無人機**，透過更長滯空時間、更高品質的感測器與穩定資料鏈，擴大海域觀測範圍。如漢翔已確認與 Shield AI 合作取得海巡署 V-BAT 艦載無人機案，該平台具垂直起降與超過 12 小時續航能力，有利在有限甲板空間下執行長時間監偵。海軍公開規劃亦包括 2026~2029 年以約 167.9 億元籌購 32 架銳鳶二及 8 套導控站，另以 360 億元籌購 280 架艦載智慧垂直起降無人機及 140 套導控系統。這類跨年度計畫帶來的不僅是機體製造，還涵蓋光電酬載、地面站、訓練與後勤服務；後續採購與在地分工逐步落實後，具備整合及長期維保能力的廠商，有機會取得更高附加價值。

圖一：Ukrainian FPV Drone - General Cherry

資料來源：烏克蘭國防部、國泰證期研究部整理

當前線需要更多「看得見」的能力，後方的基地、機場與重要設施，也需要更完整的低空防護能力。烏克蘭國防部先前就曾指出，Mavic、Autel、Matrice 等多旋翼系統仍持續大量採購，用於前線觀測，並同步測試替代產品，也說明小型監偵與大型長航時平台各有用途。對台灣而言，這種任務分層將帶動不同等級的飛控、射頻、光學與電池管理需求，也讓資安、韌體更新及檢測認證成為供應鏈的重要環節。

另一方面，反無人機系統正從單一干擾器，走向涵蓋偵測、辨識、指揮與處置的完整架構：雷達與射頻感測發現目標，光電及熱影像協助確認，指揮控制平台整合資訊，再搭配適合的反制手段。北約 2026 年公布的反無人機框架採購，同樣採取多感測器與統一指管架構，顯示市場對整合能力的重視。國內創泓科技已推出 C2 無人機防禦系統，整合訊號偵測、光學辨識及反制模組，9 月進一步介紹 Sentrycs 代理及在地合作布局，商業機會可由設備供應延伸至系統整合、技術支援與持續更新。隨光纖操控與自主飛行等技術發展，單靠切斷無線通信的反制方式，也需要更多感測器與處

置方案配合。研究部認為，反無人機市場的競爭核心，將逐步轉向跨品牌整合、現場驗證及軟體更新能力；能在複雜環境中降低誤警、穩定辨識目標並持續維護系統的業者，更有機會建立長期客戶關係。後續觀察國防及關鍵基礎設施標案的導入進度。

圖二：Ukrainian Small ISR Drone - Mavic 3 Pro

資料來源：烏克蘭國防部、國泰證期研究部整理

無人艇從船體製造延伸至自主航行與海洋感測

當船艇能夠在無人乘載的情況下完成巡邏、觀測與運補，造船產業的競爭範圍，也從船體與推進系統延伸至自主航行、通信與感測器整合。水面無人艇(USV)可執行海域監偵、通信中繼、搜救、設施巡檢及軍事任務；水下無人載具(UUV)則將觀測範圍帶到海面之下，應用於海床測繪、海纜與管線檢查、反水雷及水下環境偵測。台灣既有的軍艦、商船與高速小型船經驗，也為這個新市場提供製造基礎。台船「奮進魔鬼魚」船長 8.6 公尺、寬 3.7 公尺，最高航速超過 35 節，採三體船與模組化酬載設計，並於 2025 年取得 ABS 原則性設計認可(AIP)，為後續產品驗證建立基礎。9 月台船進一步與 Havoc 宣布合作，擬推動自主水面載具授權共同生產，展現國內造船能力與國際自主控制技術結合的方向。龍德造船則以「黑潮」切入市場，船長 9 公尺、寬 2 公尺、最高航速超過 40 節，在 25 節巡航條件下航程約 250 公里，並具自主航行及目標識別功能。隨產品逐步成形，後續量產採購與任務驗證將成為主要觀察重點。水面平台有望先帶動船體、航控、資料鏈與任務模組需求，水下市場則進一步考驗聲學設備、耐壓密封、能源及回收能力。

圖三：台船-奮進魔鬼魚(Endeavor Manta USV)

資料來源：台船、國泰證期研究部整理

另一方面，台海海象則是無人載具商業化不可忽略的限制。交通部觀測數據顯示，臺中港測站冬季平均波高約 2.1 公尺，比夏季高約 1.3 公尺，足以說明不同季節的差異性。對小型無人艇，波浪會增加船體拍擊與姿態變化，影響感測器穩定、推進效率、航速及回收；水下航行雖可減少直接受表面波浪影響，出入水、母船收放及浮出通信仍受海況約束。對無人機而言，浪高主要透過甲板運動

與海面飛濺影響艦載起降，飛行本身則更直接受到陣風、降雨及鹽霧影響。因此，廠商需要驗證的不只是最高航速，還包括不同波高、週期、浪向及酬載下的任務完成率、穩定通信、自主避碰、故障處置與回收成功率。研究部認為，能累積跨季節海試資料、維修經驗及可重複交付能力的船廠將更具競爭優勢。

從政策走向可持續交付，軍工供應鏈蓄勢

國防預算擴張、無人載具產業政策及非紅供應鏈需求，有利支持業者持續投入研發與量產。無人系統的產業效益亦將由載具製造延伸至感測器、通信、任務整合與反制設備，並隨部署規模增加，帶動備件、維修、軟體更新及訓練等後續需求，為供應鏈建立持續性收入來源。

無人機方面，長榮航太(2645)則以軍用商規艦載監偵無人機切入市場，具備航太製造與品質管理能力的延伸優勢。漢翔(2634)透過與 Shield AI 合作的 V-BAT 垂直起降無人機取得海巡案，後續成長機會包括在地整合、維保及新增採購；反無人機方面，創泓科技(7714)布局 C2 無人機防禦系統與 Sentrycs 反無人機方案，可望拓展偵測、辨識、反制及指揮控制整合業務。

表二：無人機規格與任務定位比較表

類型	代表機型 / 製造商	機體規模	續航/滯空時間	主要用途與產業重點
FPV 無人機	General Cherry/烏克蘭	多種尺寸機架	17~30 分鐘	前線任務；低成本、量產與快速補充
小型多旋翼監偵機	Mavic 3 Pro/DJI	展開尺寸約 35cm	43 分鐘	近距離監偵；便攜、影像品質與快速部署
艦載垂直起降監偵機	V-BAT/Shield AI	翼展 3.8m	12 小時以上	艦載監偵；垂直起降、酬載整合與維保
中型固定翼海洋監偵機	銳鳶二型/中科院	翼展約 12m	16 小時以上	海域監視與預警；資料鏈、感測及指管整合
大型中高度長航時無人機	MQ-9B SkyGuardian/ General Atomics	翼展約 24m	40 小時以上	長航時廣域監偵；地面站、通信與後勤支援

資料來源：國泰證期研究部整理

無人艇方面，台船(2208)的「奮進魔鬼魚」採三體船設計與模組化酬載，具備拓展多元海上任務的潛力；龍德造船(6753)的「黑潮」則以高速操縱與匿蹤設計為特色，結合既有軍用小型船建造經驗，爭取量產與後勤需求。研究部認為，後續隨產品驗證與採購逐步落實，具備系統整合、穩定交付及長期維保能力的業者，將有機會將政策需求轉化為實質營運成長。

供應跟不上需求擴大

投資與評價

1. 3Q26 受惠國際鎢供應持續吃緊、鎢價維持高檔，加上屏東二廠新增 30%產能陸續開出，自售比重持續提升，預估營收季增 47.5%，毛利率 66.5%，EPS 27.32 元創單季新高。
2. 2027 年成長動能由鎢價轉向擴產與產品高值化，屏南三廠、屏科廠陸續開出，產品由鎢酸鈉延伸至 APT、氧化鎢、鎢粉及碳化鎢，自售比重有機會挑戰 60%，預估 2026/27 EPS 83.77/109.27 元。
3. 目前股價評價位於近兩年本益比 10～24 倍區間中段，考量非中鎢供應鏈稀缺性、自售比重提升及 2027 年新產能接棒，給予區間中間偏上的 22 倍 FY27E PER，給予強力買進評等，目標價 2,400 元(22x FY27E EPS)。

重點更新

3Q26 鎢價與自售業務推升獲利續增

預估 3Q26 營收 28.43 億元 (+47.5% QoQ)，主要受惠國際鎢價維持高檔、鎢酸鈉自售業務成長，以及屏東二廠新增 30%產能陸續開出；毛利 18.90 億元 (+44.8% QoQ)，毛利率 66.5% (-1.3ppts QoQ)，營收與毛利仍維持高速成長。營業費用 1.88 億元(+55.6% QoQ)，稅後淨利 13.27 億元(+40.3% QoQ)，EPS 27.32 元創單季新高。預估 4Q26 隨新產能進一步量產、自售比重過半，營收 29.59 億元 (+4.1% QoQ)，惟費用投入增加，EPS 降至 26.17 元。

2027 年產能與高值化產品接棒

預估 2027 年營收 132.79 億元 (+52.1% YoY)，成長動能由鎢價逐步轉向產能擴張及產品高值化，屏南三廠與屏科廠新產能陸續開出，產品由鎢酸鈉延伸至 APT、氧化鎢、鎢粉及碳化鎢，自售比重有機會挑戰 60%；毛利 87.22 億元 (+48.9% YoY)，毛利率 65.7% (-1.4ppts YoY)。惟新廠與新工序投入增加，營業費用 20.62 億元(+202.8% YoY)，使營業利益 66.60 億元(+28.7% YoY)、營益率 50.2%(-9.1ppts YoY)；稅後淨利 53.09 億元(+30.4% YoY)，EPS 109.27 元再創年度新高。後續營運重點將轉向新產能利用率，以及高值化產品的提升速率。

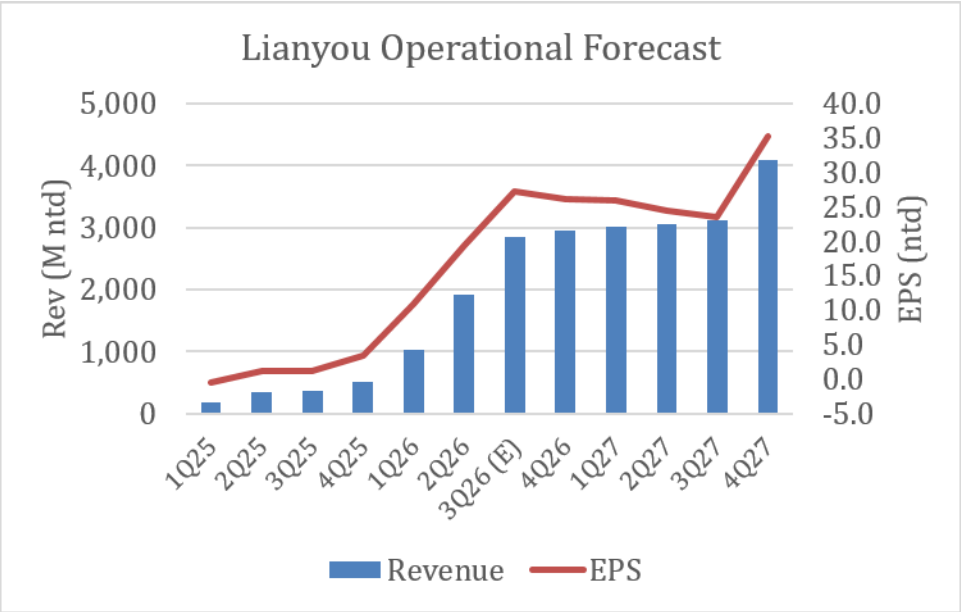
訪談內容

3Q26 鎢價與自售業務推升獲利續增

預估 3Q26 營收 28.43 億元（+47.5% QoQ），主要受惠國際鎢供應持續吃緊、鎢價維持高檔，加上鎢酸鈉自售業務成長，以及屏東二廠增加的 30%新產能部分陸續開出；國際市場中國持續限制鎢相關產品出口，尤其對美國與日本出口限制趨嚴，使國際客戶加速建立非中供應鏈，聯友以二次硬質合金回收生產鎢產品，在競爭者有限的情況下，可望維持穩定的需求與產品售價。預估毛利 18.90 億元（+44.8% QoQ），毛利率 66.5%（-1.3ppts QoQ），雖自售產品比例提高，但毛利率較 2Q26 高基期略降；營業費用 1.88 億元（+55.6% QoQ），營業利益 17.02 億元（+43.7% QoQ），營益率 59.9%（-1.6ppts QoQ）。預估稅後淨利 13.27 億元（+40.3% QoQ），EPS 27.32 元創歷史新高。除鎢產品外，公司亦持續推進循環再製鈷粉客戶認證與出貨，作為後續產品高值化方向。

圖 1：聯友金屬獲利預估



資料來源：國泰證期研究部整理

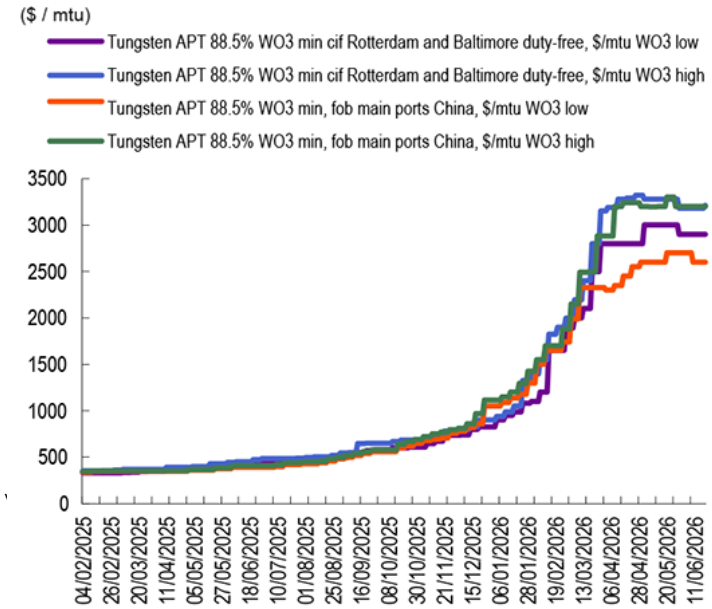
4Q26 營收續創高峰

預估 4Q26 營收 29.59 億元（+4.1% QoQ），從上季大幅成長後仍維持季增，主要受惠鎢產品自售業務持續成長，以及預期國際鎢供需仍偏緊，且公司新產能進一步進入量產階段，使單季自售比重過半。中國掌握全球主要原生鎢供應，出口限制使海外供應鏈短期難以快速補足缺口，軍工、半導體及 AI 相關精密加工需求則持續支撐國際鎢價。預估毛利 19.21 億元（+1.7% QoQ），毛利率 64.9%（-1.5ppts QoQ）；惟營業費用增至 3.00 億元（+59.6% QoQ），在於新的工序流程投資持續投入，使營業利益 16.22 億元（-4.7% QoQ），營益率 54.8%（-5.1ppts QoQ）。預估稅後淨利 12.71 億元（-4.2% QoQ），EPS 26.17 元；整體而言 4Q26 營收與毛利仍向上，但費用增加使獲利較 3Q26 高峰略為回落。

2026 年鎢價大漲與自售比例增加

預估 2026 年營收 87.31 億元(+521.2% YoY)，受惠國際鎢價大幅上漲、鎢酸鈉自售業務放量，以及非中鎢供應鏈需求快速提升。中國鎢出口限制使國際市場供給趨緊，聯友具備廢硬質合金回收、濕法冶金及既有海外客戶基礎，使鎢價上漲透過自售產品，直接轉化為獲利成長。預估毛利 58.57 億元(+1,254.0% YoY)，毛利率由 2025 年的 30.8%大幅提升至 67.1%(+36.3ppts YoY)，主因仍在產品國際報價及自售業務成長明顯；營業費用 6.81 億元 (+452.3% YoY)，營業利益 51.76 億元 (+1,573.7% YoY)，營益率 59.3% (+37.3ppts YoY)。預估稅後淨利 40.70 億元 (+1,587.1% YoY)，EPS 83.77 元創歷史新高，2026 年為公司材料處理量由加工大幅轉向自售產品後，獲利結構明顯轉變。

圖 2：鎢金屬價格走勢



資料來源：Fastmarkets, 國泰證期研究部整理

2027 年產能與高值化產品接棒

預估 2027 年營收 132.79 億元 (+52.1% YoY)，在 2026 年鎢價與自售業務快速成長後，2027 年成長動能逐步由價格轉向產能擴張及產品高值化。公司規劃由既有鎢酸鈉進一步向 APT、氧化鎢、鎢粉及碳化鎢延伸，屏南三廠與屏科廠相關新產能預計陸續開出，鎢相關加工產能有機會擴增倍翻，若產品認證與量產順利，可望提高公司在鎢產業鏈的垂直整合程度。預估毛利 87.22 億元 (+48.9% YoY)，毛利率 65.7% (-1.4ppts YoY)，在營收快速擴張下仍維持六成以上高毛利率；惟配合新廠、新產品及營運規模擴張，營業費用增至 20.62 億元 (+202.8% YoY)，使營業利益 66.60 億元 (+28.7% YoY)，營益率降至 50.2% (-9.1ppts YoY)。預估稅後淨利 53.09 億元 (+30.4% YoY)，EPS 109.27 元再創年度新高；2027 年營收與毛利仍維持高速成長，但費用投入增加使獲利增速低於營收，後續營運重點將轉向新產能利用率，及 APT、氧化鎢、鎢粉、碳化鎢等高值化產品的提升速率。

非中鎢供應鏈稀缺性提升

中國鎢出口限制使國際供應持續偏緊，聯友藉二次硬質合金回收與濕法冶金技術，受惠國際客戶加速建立非中供應鏈，2026 年鎢價上漲、自售比重提升及屏東二廠新增產能開出，帶動獲利明顯成長；2027 年成長動能則由格進一步轉向產能擴張與產品高值化，隨屏南三廠及屏科廠新產能陸續開出，產品由鎢酸鈉延伸至 APT、氧化鎢、鎢粉及碳化鎢，自售部分有機會在 2027 年挑戰 60%。預估 2026/27 EPS 為 83.77/109.27 元。3. 目前股價評價位於近兩年本益比 10～24 倍區間中段，考量非中鎢供應鏈稀缺性、自售比重提升及 2027 年新產能接棒，給予區間中間偏上的 22 倍 FY27E PER，給予強力買進評等，目標價 2,400 元(22x FY27E EPS)。

產業概況

鎢金屬需求持續由工業與國防驅動

2026 年中國鎢總供給約 8.51 萬噸 W、YoY +12.4%，其中原生礦約 4.36 萬噸、幾乎零成長，回收鎢則由高價刺激增加約 50%至約 3.0 萬噸，使回收料占供給由 2025 年的 25–26%升至約 35%；換言之 2026 幾乎所有可快速增加的供給彈性都來自回收處理，使得非新礦山供應的競爭也明顯升高。顯示高鎢價已開始抑制價格敏感度較高的傳統用途，但切削工具、航太與國防等剛性需求仍維持成長。全球鎢需求主要仍來自硬質合金，應用於切削工具、礦山鑽頭、汽車與精密加工；其中礦業與營建約占 2025 年全球 WC 市場 38.5%。

國防需求的重要性在 2026 年進一步提高，美國與以色列對伊朗軍事行動、俄烏戰爭持續消耗飛彈與穿甲彈用鎢，這類用途與硬質合金不同，使用後無法回收，使其對原生鎢形成永久性消耗。因全球每年鎢需求約 10～11 萬噸，其中原生礦約占 65%、回收料約 35%，現有需求須依賴二次資源補足。短期新礦與冶煉產能建置時間長，因此即使高價刺激新增供給，供需緊張仍不容易快速逆轉。

各應用來看硬質合金(Cemented carbide)佔比最大，主要用於切削刀具、採礦鑽頭、耐磨零件與國防彈藥等。加工材/材加工品 (Mill products): 如鎢絲、鎢棒、鎢板等。鋼鐵與合金 (Steel & alloys) 用於高速鋼、耐熱合金鋼等。化學品 (Chemicals): 催化劑、顏料及化學試劑。其中 PCB 鑽針需求在近年也快速增加，據估計因 AI server PCB 變得更厚、更多層、更難鑽，高速低損耗材料使 WC 鑽針磨耗大幅提高。AI server PCB 已朝 28–46 層甚至更高層數發展，而一般鑽針原本約可加 工 3,000 孔，在高階材料下可能降到約 600 孔，在相同鑽孔量可能需要接近 4–5 倍鑽針消耗。半導體需求在 4Q26 仍然偏強，其中第一類是半導體製程本身使用的高純度鎢/WF_6 等材料，另一類是晶圓、封裝、設備與零組件加工所使用的 WC 超硬工具。整體而言隨著 AI GPU/ASIC、HBM 與先進封裝擴產，使高純度 W 與精密 WC 工具需求維持穩定成長。

中國七成產能限制鎢出口影響大

全球鎢供應高度集中，在 2025 年全球鎢精礦開採產量約 8 萬多噸，中國占約 75%，且中國同時掌握從礦山、APT、鎢粉到碳化鎢的完整加工鏈，鎢的供應風險除了礦源集中，更包含中游精煉能力集中。2H25 開始中國開始收緊鎢礦開採配額並實施出口管制後，非中國市場供給明顯轉緊，價格也顯著提升。

全球鎢市場主要依賴中國供應，因此中國價格大致主導全球定價；但出口限制與供應鏈安全政策出現後，國際買家開始建立中國以外的礦源、冶煉及回收體系，使得國際報價持續走高，鎢回收目前約占全球供給三成，雖然產地來源風險較低，但是既有供應鏈的產能瓶頸，使得回收流程取得鎢的價格持續走高。雖陸續有些新礦場宣告將投入開發，但仍需兩年以上時間準備，舊有礦場的重啟也面臨到回收率與經濟性的挑戰，且對於環境衝擊高未必適合歐美國家，目前最為環保與的作法仍是從回收鎢開始加工。透過廢鎢回收陸續轉化為鎢酸鈉、APT、氧化鎢、鎢粉、碳化鎢，將有利於賣方市場的精鍊供應商，邁向更高值化的末端產品發展。

美國積極多元化鎢礦來源

3Q26 美國政府承諾向 Elmet Group 投入 US$450mn，並搭配 DLA 最高 US$2bn 鎢戰略庫存採購，政策目標已從單純取得礦源轉向礦山+APT/精煉+零組件的垂直整合。US$450mn 投資將用於擴張美國鎢製造能力、取得長期原料、投資美國及盟國礦山與建立新的 refining/conversion 能力；其中初期資金約 US$200mn。另一方面 DLA 與 Elmet 簽訂最高 US$2bn IDIQ 合約，最低保證採購 US$150mn，品項直接涵蓋鎢礦、鎢精礦及鎢酸鈉；Elmet 待新增礦山、offtake 與 processing capacity 形成後才向戰略庫存交貨，以避免政府囤貨擠壓既有民間供應。EQ Resources 規劃向美國供應 4,000 噸鎢精礦；但 Nevada APT processing facility 全面恢復營運預計要到 2H28，因此 4Q26 政策首先增加的是戰略採購與長約需求，而非立即增加 APT 現貨供給。這代表短期甚至可能強化非中國的原料競爭，但預計要數年後後才有機會逐步改善美國中游加工缺口。

鈷金屬供給仍有短缺風險

2025 年全球鈷礦產量約 31 萬噸，其中剛果民主共和國約 23 萬噸、占七成比重，全球約 50%儲量亦集中於剛果，而中國又掌握全球七成以上鈷精煉能力，因此上游礦源與中游精煉均高度集中。需求方面 2025 年全球鈷消費動力電池占比超過 65%，EV 仍是最大需求來源；雖電池高鎳化、低鈷化以及 LFP 滲透率提升，會限制單位電池鈷用量成長，但 IT 電池的使用仍以氧化鈷為主要材料。而長期更值得注意的是航空發動機、燃氣渦輪、國防設備所使用的高溫合金，以及硬質合金與高性能磁鐵需求。高溫合金目前約占鈷需求 15～20%，工業工具、硬質合金與催化劑約一成，使鈷逐漸從單一新能源金屬轉變成兼具新能源與戰略材料屬性的關鍵金屬；在供應集中及可追溯要求提高下，循環再生鈷、高純度鈷粉與非中國精煉能力的戰略價值亦將持續提高。

公司簡介

聯友金屬不依賴原生鎢礦，而是以廢硬質合金、鎢鋼及研磨屑等二次料作為鎢來源，經濕式冶金回收後製成鎢酸鈉（Sodium Tungstate），同時回收鈷，形成 WC/鎢鋼廢料、鎢酸鈉、APT、氧化鎢的城市礦山供應鏈。公司目前鎢酸鈉年產能約 6,000 噸，2025 年鎢酸鈉出貨約 4,728 噸、YoY +8%，其中代工約占 52%、自售約 48%，相較 2024 年代工 42%、自售 58%，可看出自有設備利用率已處相對高檔；公司規劃透過新廠將鎢酸鈉產能進一步提高至約 12,000 噸/年、較現有產能增加 100%，若以鎢酸鈉 $Na_2WO_4{\cdot}2H_2O$ 含鎢重量約 55.7%換算，滿產相當於一年可處理約 6,700 噸 W contained。公司並規劃進一步向下游 APT 與氧化鎢延伸，使產品由目前以鎢酸鈉為主，逐步建立回收料、鎢酸鈉、APT、WO_3的垂直整合能力。

ESG 政策

公司在社會面評分上屬中上，然而需在經濟與環境面與揭露面強化:
經濟面: 股東權益方面，公司優點為董事長親自出席股東常會；股東會結束後公開揭露逐項議案之詳細表決資訊。公司可加強處為當年度未召開 2 次以上法人說明會。
法規遵循方面，公司於題項評估期間未有不合理或受主管機關處分之情事。獨立董事方面，公司優點為至少 2 名獨立董事之連續任期不超過 9 年。公司可加強處為獨立董事席次未達董事席次二分之一以上。董事會永續治理方面，公司優點為有設置永續發展相關委員會；有制訂環境、社會及治理之中長期發展策略；當年度永續報告書經董事會通過。公司可加強處為負責永續發展之最終負責人非董事長或總經理。董事會績效與薪酬方面，公司優點為將董事績效評估與薪資報酬連結。公司可加強處為企業永續績效尚未與高階主管及董事薪酬進行連結。
董事會多元性方面，公司優點為揭露董事會多元化政策並揭露落實情形；董事會成員具備不同專業背景。公司可加強處為任一性別董事席次未達 1/3。永續創新方面，公司優點為取得綠色認證。公司可加強處為未揭露綠色相關部門設置情形與職責；未揭露綠色/永續採購之政策或金額。
此外，產業創新方面，公司優點為對其專利之智慧財產權進行管理與保護，並揭露量化績效。
法規遵循方面，公司近 3 年並未受公平交易委員會懲罰。

環境面: 環境系統與治理方面，公司優點為積極將綠色概念融入營運過程，打造綠色價值鏈；榮獲 ISO 14001 環境管理認證；將環境管理作為與聯合國永續發展目標(SDGs)連結。空氣管理方面，公司優點為制定空氣管理政策、揭露空氣汙染排放數據；公司可加強處為未揭露量化空氣汙染減量目標。法規遵循方面，評估期間未違反空氣汙染相關法規或已針對違反情形提出具體改善措施。氣候變遷管理方面，公司可加強處為未說明董事會或管理階層對氣候變遷議題之監督頻率或事項；未揭露使用具公信力的 1.5 °C 以下及 3 °C 以上溫度情境評估氣候風險；未揭露與供應鏈或合作夥伴共同推動因應氣候變遷相關策略；未揭露氣候變遷對公司所產生的機會項目。
溫室氣體管理方面，公司優點為揭露至少三年的溫室氣體範疇一與二排放量，並揭露涵蓋範圍或佔營收比率。公司可加強處為未揭露溫室氣體管理專責單位及相關管理政策；未揭露範疇三排放量；未揭露量化溫室氣體減量目標；未揭露是否通過碳盤查認證。節能管理方面，公司優點為揭露用電或節能數據。公司可加強處為未揭露能源管理專責單位及相關管理政策；未揭露節能量化目標；未揭露能源風險對營運的影響評估結果。再生能源管理方面，公司可加強處為未揭露再生能源管理專責單位及相關推動政策；未揭露再生能源使用量或發電量；未揭露量化再生能源發展目標。廢水管理方面，公司優點為制定廢水管理政策、揭露廢污水排放量；公司可加強處為未揭露量化廢汙水減量目標。
揭路面: ESG 揭露方面，公司優點為依據 GRI 準則編寫永續報告書；於永續報告書清楚說明揭露範疇；建置英文網站，並包含財務、業務及公司治理相關資訊；於永續報告書揭露重大性分析細節。公司可加強處為永續報告書未依據 SASB 進行對應揭露；未上傳英文版永續報告書於公開資訊觀測站；永續報告書尚未經過第三方機構確信或保證；未於官網揭露利害關係人問卷，供利害關係人回饋；未說明公司營運對應 SDGs 目標之具體作為；未揭露使用雙重重大性分析重大性議題。

股價相對大盤走勢

台達電(2308 TT) Buy

產品組合較佳，獲利持續提升。

投資建議：受惠於 AI、Data Center 領域需求成長，營收與獲利維持成長趨勢，投資評等為 Buy，目標價為 2,680 元。

預估 3Q26 營收 QoQ+7.28%：受缺料影響，預估 3Q26 營收為 1,965.94 億元、QoQ+7.28%；在無較大業外收支下，稅後淨利為 257.42 億元、QoQ+2.41%，稅後 EPS 為 9.91 元。受惠於新一代 AI 伺服器放量與缺料緩解，預估 4Q26 營收為 2,218.52 億元、QoQ+12.85%；稅後淨利為 309.71 億元、QoQ+20.32%，稅後 EPS 為 11.92 元。

產品規格提升，電源類產品展望佳：台達電為 AI 伺服器電源解決方案主要供應商，受惠於 AI 需求提升，帶動 AC/DC 電源大幅成長外，CSP 客戶在新一代 ASIC 伺服器平台採用 DC/DC 電源模組，亦成為另一成長動能。800 VDC 與±400VDC 預計於 4Q26 出貨，2026 年營收比重約 1%，預期 2H27 營收貢獻較顯著。

水冷散熱 2026 年營收維持成長趨勢：水冷散熱產品有水冷板、Manifold、CDU、Sidecar。目前出貨以系統類的 Sidecar 為主，歸類於基礎建設；CDU 則歸類於電源類與零組件。水冷散熱 2025 年營收比重為 9%，台達電 Sidecar 產品 2025 年市佔率極高，雖有競爭者加入，但整體市場需求持續增長，2026 年 Sidecar 營收仍將維持成長趨勢，預估 2026 年水冷散熱營收比重為 12%。

固態變壓器為長期成長動能：SST(固態變壓器)目前已少量出貨，客戶為中系 CSP、800V 高壓直流電動車充電站，亦出貨給美系客戶測試。SST 導入需從資料中心設計初期即納入規劃，預期 2~3 年後會產生顯著的營收貢獻，仍持續改良產品規格中。

註：稅後純益係指本期淨利歸屬於母公司業主；稅後 EPS 以股本 259.75 億元計算。

ESG：

台達電超過一半的董事會成員實際參與台達永續委員會、節能管理、節水減廢管理，及再生電力的重要會議；永續長每季向董事會報告氣候變遷的管理進展，並且由董事會針對重要議題做決策。在進行重要併購或是新建廠房等決策時，亦會考量氣候變遷的風險與機會。

ESG 委員會為內部最高層級氣候相關推動組織。管理職責回歸包含企業永續發展部、節能服務部、財務、採購、人資、事業群等單位策略。依企業策略、氣候風險大數據、各類研究報告，以及外部評比指標鑑別風險與機會項目。

在治理層面，本報告新增「產品安全」與「品質管理」專章，藉由制定符合國際標準的相關政策與指引，強化控管機制，確保產品皆經嚴謹把關。此外，台達確立風險組織架構，由風管推動委員會辨別集團短期至長期（新興）風險，並完善風險管理流程。在供應鏈管理上，台達則首次舉辦「供應商 ESG 溝通大會」，明確傳達 ESG 與低碳供應鏈管理策略。

為推動價值鏈減碳，台達成立兩項子委員會，分別針對 C1(採購的產品與服務)與 C11(售出產品的使用)開展減碳行動。透過跨部門合作，盤點原物料採購與產品使用階段之碳排數據，並推動包括產品能效提升、低碳材料設計、以及與供應商與客戶議合，致力於實現範疇三減碳目標。

在自然資本保育方面，台達目標於 2050 年實現淨值正面效益(NPI)。2024 年成為 TNFD Early Adopters，並首次發表《氣候與自然生物多樣性報告書》，依循 TCFD、TNFD 與 IFRS S2 等國際準則，提升揭露品質與透明度。同年，參與聯合國生物多樣性 COP16 分享自身實踐，並連署 Business for Nature 發起之「Renewed policy ambition on nature」企業聲明，倡議將自然納入政策決策。

【投資評等說明】

評等	定義
強力買進(Strong Buy)	首次評等潛在上漲空間≥35%
買進(Buy)	15%≤首次評等潛在上漲空間<35%
區間操作(Trading Buy)	5%≤首次評等潛在上漲空間<15%
中立(Neutral)	無法由基本面給予投資評等 預期近期股價將處於盤整 建議降低持股

【投資評等調整機制】

投資評等係「首次」給予特定個股投資評等時，其前一日收盤價相較 3 個月目標價之潛在上漲空間計算而得。個股投資評等分為四個等級，定義如上。爾後的投資評等係依循「首次評等」，直到停止推薦。

「強力買進」、「買進」及「區間操作」均有 upside 目標價。差別僅在於，首次評等時潛在報酬率不同。「中立」則無目標價。

一旦我們給予特定個股「強力買進」、「買進」或「區間操作」之投資評等，就是責任的開始，爾後將透過各式研究報告作定期性、持續性追蹤基本面及股價變化，直到停止推薦。

停止推薦情境：

1. 達目標價。
2. 雖未達原訂目標價，但檢視基本面、訊息面、籌碼面等多方訊息，研判股價上漲空間已然有限，將適時出具降評報告。
3. 推薦後股價不漲反跌。

【免責聲明】

本研究報告僅提供予特定人之客戶作為參考資料「非經同意不得轉載」。我們並不確保此資訊的完整性與正確性，投資人應了解，報告中有關未來預測之陳述可能不會實現，因而不應被依賴。而且此報告並非根據特定投資目的或依預定對象之財務狀況所撰寫出來的，因此，此研究報告的目的，既非對投資人於買賣證券、選擇權、期貨或其他證券相關之衍生性商品提供詢價服務，亦非作為進行交易的要約。投資人應注意到相關證券之價值及收益，可能會有無預警地上升或下降，產生投資回報金額可能比原始投資來得少的情形。

禾伸堂(3026 TT) Buy

NP0 MLCC 受惠 AI SERVER 電源架構升級

投資建議：受惠 AI SERVER 電源架構升級，禾伸堂在 NP0 具領先同業優勢，營收及毛利率將同步攀升，投資建議為 Buy，目標價 1,080 元。

高階 MLCC 占比持續攀升，2Q26 財報表現優異：

禾伸堂 2Q26 營收 40.97 億元(QOQ+13.2%/YOY+25.2%)，優於市場預期，主因受惠於高階 MLCC 產出與銷售增加，帶動毛利率達 26.18% (QOQ+1.94ppts/YOY+6.37ppts)，費用率 10.89%與 2Q26 相當，本業淨利 6.27 億元(QOQ+29.6%/YOY+111.2%)，稅後純益 6.42 億元(QOQ+35.2%/YOY+179.1%)，較去年同期倍增，2Q26 稅後 EPS 3.87 元，獲利呈現大幅增長，優於市場預期。

展望未來，NP0 MLCC 市佔率有望持續攀升，獲利將同步上揚：

以 NP0 與 X7R/X8R 競爭態勢來看，目前電源類產品的驗證需要經過直接客戶、終端客戶以及安規認證，整體認證時間至少需要 2~3 年，以 VR 機種來看，台廠目前通過認證家數不到 3 家，當前 NP0 以禾伸堂為主要份額。日韓競爭方面，因高階小尺寸 MLCC 產能持續緊缺，日韓等主要大廠傾向優先轉向生產 0201、0402、0603 等小尺寸規格，且擴產意願不高，故客戶有望轉向要求禾伸堂增加產能與供給，2027 年 NP0 市佔率有望進一步提升。禾伸堂 2Q26 AI 應用占比約為 32%，考量 Vera Ribin 將於 4Q26 開始小量生產，於 2027 年正式放量，加上 TPU 與 ASIC 平台需求快速成長，皆有望帶動高階 MLCC 用量需求持續提升，群益預估禾伸堂 2026 年底 AI 應用占比有望達 45%，2027 年底將提升至 60%。綜上所述，預估 2026 年營收為 171.22 億元(YOY+27.5%)、2027 年營收為 245.70 億元(YOY+43.5%)，毛利率受惠 AI 比重持續拉升分別為 26.8%及 34%，2026 年、2027 年稅後 EPS 為 16.43 元及 31.59 元，獲利呈現大幅增長。

ESG(Environment, Social, Governance)：

禾伸堂（3026 TT）致力於永續發展，在不斷精進技術研發及調整產品組合之下，同時將保護環境及節能減廢納入重要管理項目。在溫室氣體管理的部分，2025 年臺灣地區溫室氣體排放已進行盤查，並於 2026 年完成第三方查驗，2025 年也依據 ISO 14067:2018 標準完成積層陶瓷電容產品碳足跡查證，透過了解產品碳排放量，以制定有效的減碳計畫；此外，為了有效減少溫室氣體排放，透過自發自用太陽能光電 2025 年已取得國家再生能源憑證中心發放之綠電憑證 T-REC 628 張（626,064 度），推估減少溫室氣體排放約 309.28 公噸。在能源與資源管理方面，落實廢棄物分類管理，並進行製程原物料與廢溶劑回收再利用的「轉廢為能」計畫，與供應商合作將廢塑料作為固體再生燃料（SRF），2025 年共計回收 117.05 公噸，大幅減少廢棄物直接焚化的處理量；另外，2025 年回收溶劑量約 194.70 公噸，有效減少溶劑（原物料）採購及廢棄物處理費用，並降低對環境的衝擊。

公司簡介：

禾伸堂(3026 TT)成立於 1981 年。公司總部位於台灣台北，生產基地分布於桃園龍潭、宜蘭利澤以及日本北海道。早期以被動元件代理商起家，後期切入利基型積層陶瓷電容器(MLCC)及固態電容研發製造。主要產品包含：積層陶瓷電容(MLCC)、主動元件、系統模組與其他代理產品。公司代理產品以銷售通訊、車用及消費性電子市場為主。2Q26 產品營收比重:被動元件 45%、主動元件 22%、系統模組 15%、其他 18%。

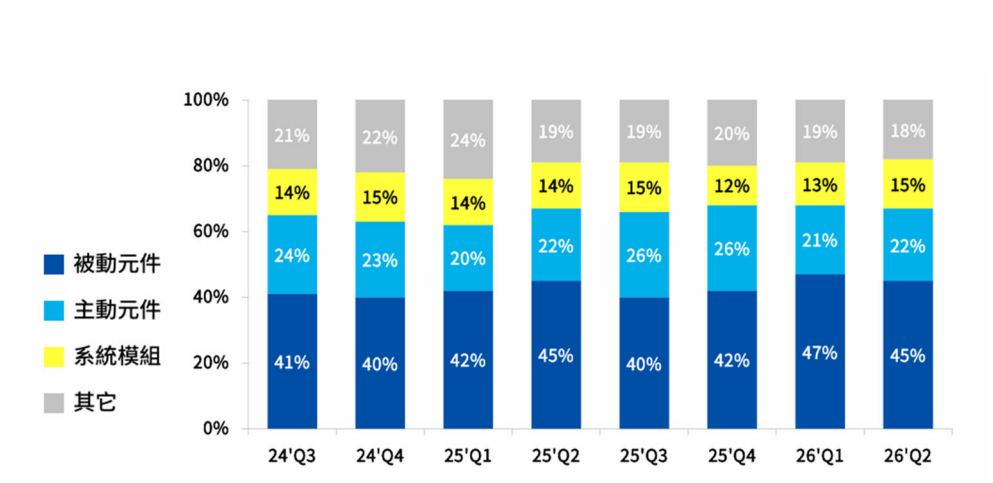
圖二、禾伸堂產品營收比重:



資料來源：禾伸堂、群益投顧彙整

高階 MLCC 占比持續攀升，2Q26 財報表現優異：

禾伸堂 2Q26 營收 40.97 億元(QOQ+13.2%/YOY+25.2%)，優於市場預期，主因受惠於高階 MLCC 產出與銷售增加，帶動毛利率達 26.18% (QOQ+1.94ppts /YOY+6.37ppts)，費用率 10.89%與 2Q26 相當，本業淨利 6.27 億元(QOQ +29.6%/YOY+111.2%)，稅後純益 6.42 億元(QOQ+35.2%/YOY+179.1%)，較去年同期倍增，2Q26 稅後 EPS 3.87 元，獲利呈現大幅增長，優於市場預期。

因 AI 伺服器電源架構升級，帶動 NP0 MLCC 用量顯著大增：

禾伸堂目前產品主要應用於電源類，尤其是 AI 伺服器隨著電源供應器瓦數增加，電源從 IT Rack 移出獨立成 Power Rack(Sidecar Rack)，新一代 Rubin 平台架構也將朝向更高功率密度的獨立電源櫃與多元電力備援系統發展。這項架構轉型大幅推升了高電壓、高效能與高穩定性被動元件的需求，其中 NP0 材質之積層陶瓷電容（MLCC）因具備極佳的溫度穩定性、低介質損耗與高可靠度，成為高功率電源供應器與電壓調節模組（VRM）中不可或缺的關鍵零組件，因過去多採用單相 PSU(如 3.3kW、4.2kW、4.3kW 等)，而下一世代為了在高瓦數下增加效率，Power Rack 已轉成三相 AC/DC PSU，此外，內部仍需要進行 DC/DC 轉換(400V 降至 48V/50V，或 800V 降至 48V)，群益預估單一機櫃所需的 NP0 MLCC 數量可提升 3~5 倍。

圖三、AI 功率持續提升，電力需求全面升級:

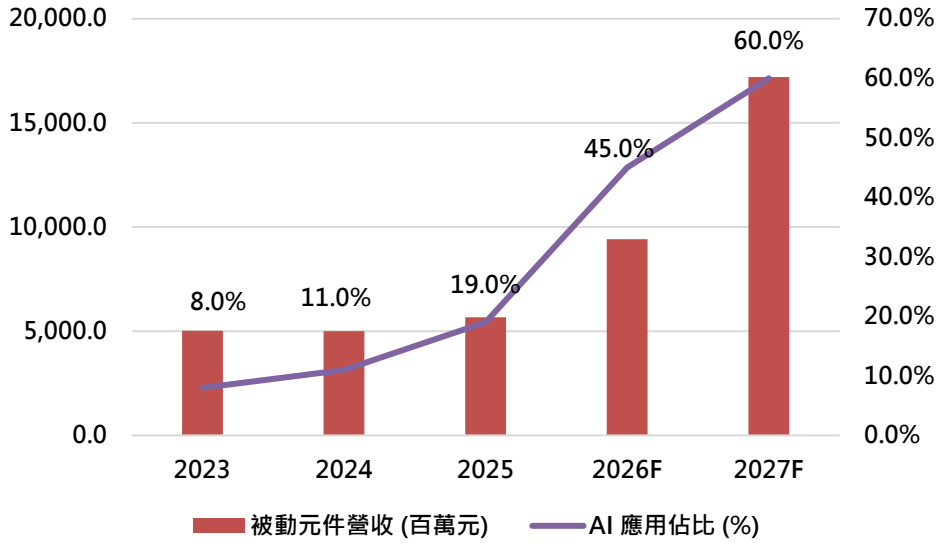
<u>展望未來，NP0 MLCC 市佔率有望持續攀升，獲利將同步上揚</u>：

以 NP0 與 X7R/X8R 競爭態勢來看，目前電源類產品的驗證需要經過直接客戶、終端客戶以及安規認證，整體認證時間至少需要 2~3 年，以 VR 機種來看，台廠目前通過認證家數不到 3 家，當前 NP0 以禾伸堂為主要份額。日韓競爭方面，因高階小尺寸 MLCC 產能持續緊缺，日韓等主要大廠傾向優先轉向生產 0201、0402、0603 等小尺寸規格，且擴產意願不高，故客戶有

望轉向要求禾伸堂增加產能與供給，2027 年 NP0 市佔率有望進一步提升。

禾伸堂 2Q26 AI 應用占比約為 32%，考量 Vera Ribin 將於 4Q26 開始小量生產，於 2027 年正式放量，加上 TPU 與 ASIC 平台需求快速成長，皆有望帶動高階 MLCC 用量需求持續提升，群益預估禾伸堂 2026 年底 AI 應用占比有望達 45%，2027 年底將提升至 60%。綜上所述，預估 2026 年營收為 171.22 億元(YOY+27.5%)、2027 年營收為 245.70 億元(YOY+43.5%)，毛利率受惠 AI 比重持續拉升分別為 26.8%及 34%，2026 年、2027 年稅後 EPS 為 16.43 元及 31.59 元，獲利呈現大幅增長。

圖五、禾伸堂 AI 占比 2027 年預估達 60%:



資料來源：群益投顧預估

投資建議：受惠 AI SERVER 電源架構升級，禾伸堂在 NP0 具領先同業優勢，營收及毛利率將同步攀升，投資建議為 Buy，目標價 1,080 元。

【投資評等說明】

評等	定義
強力買進(Strong Buy)	首次評等潛在上漲空間≥35%
買進(Buy)	15%≤首次評等潛在上漲空間<35%
區間操作(Trading Buy)	5%≤首次評等潛在上漲空間<15%
中立(Neutral)	無法由基本面給予投資評等 預期近期股價將處於盤整 建議降低持股

【投資評等調整機制】

投資評等係「首次」給予特定個股投資評等時，其前一日收盤價相較 3 個月目標價之潛在上漲空間計算而得。個股投資評等分為四個等級，定義如上。爾後的投資評等係依循「首次評等」，直到停止推薦。

「強力買進」、「買進」及「區間操作」均有 upside 目標價。差別僅在於，首次評等時潛在報酬率不同。「中立」則無目標價。

一旦我們給予特定個股「強力買進」、「買進」或「區間操作」之投資評等，就是責任的開始，爾後將透過各式研究報告作定期性、持續性追蹤基本面及股價變化，直到停止推薦。

停止推薦情境：

1. 達目標價。
2. 雖未達原訂目標價，但檢視基本面、訊息面、籌碼面等多方訊息，研判股價上漲空間已然有限，將適時出具降評報告。
3. 推薦後股價不漲反跌。

【免責聲明】

本研究報告僅提供予特定人之客戶作為參考資料「非經同意不得轉載」。我們並不確保此資訊的完整性與正確性，投資人應了解，報告中有關未來預測之陳述可能不會實現，因而不應被依賴。而且此報告並非根據特定投資目的或依預定對象之財務狀況所撰寫出來的，因此，此研究報告的目的，既非對投資人於買賣證券、選擇權、期貨或其他證券相關之衍生性商品提供詢價服務，亦非作為進行交易的要約。投資人應注意到相關證券之價值及收益，可能會有無預警地上升或下降，產生投資回報金額可能比原始投資來得少的情形。

4Q26 營運展望正向；訂單篩選策略啟動

- **3Q26 成長動能延續；管理層審慎樂觀展望 4Q26**
- **下單模式轉變；客戶與訂單篩選支撐獲利能力**
- **2027 年復甦幅度仍取決於客戶補庫存時點**

營運維持溫和復甦，4Q26 展望轉趨正向：聚陽 3Q26 營收 94.8 億元、YoY+6.7%；前 9 月累計營收由負轉正為年增 0.2%，整體出貨大致符合公司預期。9 月營收 29.3 億元、YoY+24.1%，因去年同期低基期而有較高成長，但適逢聖誕節與感恩節出貨旺季導致船班擁擠，約 8,000 萬元營收遞延至次月。3Q26 出貨量估維持個位數年增，ASP 大致持平，預期毛利率仍可維持 24%以上水準。展望 4Q26，管理層看法轉趨正向，並啟動訂單篩選，包含挑選客戶、產品類別及提高短單比重，優先承接獲利能力較佳的業務，預期將有助於提升獲利表現。

短單占比提升，客戶與訂單篩選支撐獲利能力：受中東戰爭、油價及終端需求不確定性影響，客戶下單模式轉變，初期訂單通常未一次下滿，後續再以追加單補足，此趨勢預計延續至 4Q26。客戶下單模式轉向短單，使訂單能見度維持在約 4 個月，但聚陽具備快速反應與急短單生產優勢，而短單報價相對較佳，反而有利毛利率表現。公司將篩選價格及獲利條件較佳的訂單，減少關稅與原物料成本壓力較大的品項；4Q26 成長動能主要來自百貨公司、美系品牌及通路商回補庫存需求，在訂單結構及產品組合優化帶動下，獲利能力有望持續改善。

東南亞持續擴產，2027 年復甦幅度仍取決於客戶補庫存時點：產能佈局方面，由於菲律賓廠關閉抵銷部分新增產能，2026 年整體產能增幅有限，未來將持續以印尼與孟加拉作為主要擴產據點。展望 2027 年，客戶庫存已處低檔，管理層認為待美國期中選舉結束、政策與外部環境明朗後，客戶下單週期有望逐步恢復正常，將對具規模的大型供應商相對有利。不過，目前終端需求仍屬溫和，回補庫存啟動時點及力道尚未明確，因此短期營運可望延續緩和改善趨勢。公司表示內部營運體質已完成調整，後續較明顯的成長仍須等待外部需求回溫。

4Q26 營運正向，2027 年也有望持續復甦，惟時程與幅度仍須觀察。因此維持審慎的 14 倍 PER，以未來四季預估 EPS 計算，目標價 242 元。**風險因子：**外部環境變化、終端需求、客戶回補庫存速度。

WEEKLY WEBCAST: Bond Yields On The Spectrum: From Good To Ugly (with special guest Nick Raich)

By Ed Yardeni • 7 Oct 2026

View in browser

Is the bond selloff the Revenge of the Bond Vigilantes, i.e., a looming debt crisis? Not yet. Despite the recent surge, the 10-year Treasury yield remains below the growth rate of nominal GDP. That points toward an upward repricing of the neutral interest rate. Ed and Elias examine the spectrum of forces behind higher yields, from rising R* to a potential debt-crisis scenario. The real warning sign would be if the yield rises above nominal GDP growth. In addition, they consider two other spectrum scenarios: the war in the Middle East and the yen-carry trade. … Also: The latest labor market data suggest resilient but noninflationary strength.

Elon Musk denies TSMC to build and run TeraFab for SpaceX/Tesla

路透社說馬斯克否定台積電將為 SpaceX/Tesla 建廠及經營 TeraFab，頂多是分租場地

ANDREW LU ON GLOBAL SEMI/TECHS
OCT 7 • PAID

READ IN APP

What's new?

Elon Musk 表示 Tesla 與 SpaceX 將自行興建、營運 Texas TeraFab，並強調 TSMC 最多可能分租其中一部分；Intel CEO Lip-Bu Tan 表示 Intel 作為夥伴仍將參與。這是營運主體的明確澄清，但並非晶圓廠技術或投資決策的完整公告。

主要新聞： Reuters，2026-10-07 13:13 台北

Positively affect what supply chain vendors and why?

若專案落地，美國 fab EPC、無塵室、電力／水處理、Applied Materials、Lam Research、KLA、ASML、EDA／IP 與先進封裝供應商具選擇權。Intel 若提供製程技術、營運人才或代工支援，可提升產能利用率與先進製程外部驗證。

Negatively affect what supply chain vendors and why?

「TSMC 出資、擁有、營運」的題材被直接否定，現在 Tesla／SpaceX 必須全面承擔良率、人才、污染控制、供應商認證與資本密度。若 TeraFab 只做成熟製程或後段整合，其對先進邏輯設備與材料的拉動會遠低於市場期待。

Our outside-the-box, non-consensus thinking

台積電分租 TeraFab 其中一部分是很奇怪的決定，依照過去經驗，台積電在先進製程應該會自己擴產，營運，頂多拿些 SpaceX/Tesla 資金，實在沒有理

由去分租 TeraFab 一部分廠房。除非TeraFab 只想先做晶圓製造，但把 CoWoS/3D IC 先進封裝部分先交給台積電負責，但這對台積電而已除了可能拉低毛利率，也培養客戶在晶圓製造上產生合理現金流再加速追趕技術，實在不合理。

Our advice to investors

在看到六項硬證據前，只給選擇權價值：法人實體與股權、總 capex、製程節點、wafer starts per month、首批設備 PO、量產／良率責任。TSMC 分租目前不應估入其長期營收；Intel 參與也不等於已取得製造訂單。

Risks to our analysis

Musk 的專案範圍與合作模式仍可能有改變；TSMC、Intel 均未立即回應。美國補貼、出口管制、設備交期、人才、電力與水資源都可能改變經濟性；若 TeraFab 僅是談判工具，供應鏈訂單可能不會發生。

2028 Should Be A Good Year

By Ed Yardeni & Elias Griepentrog • 6 Oct 2026

Photo by Patrick Fore / Unsplash

I. Blue skies ahead for earnings?

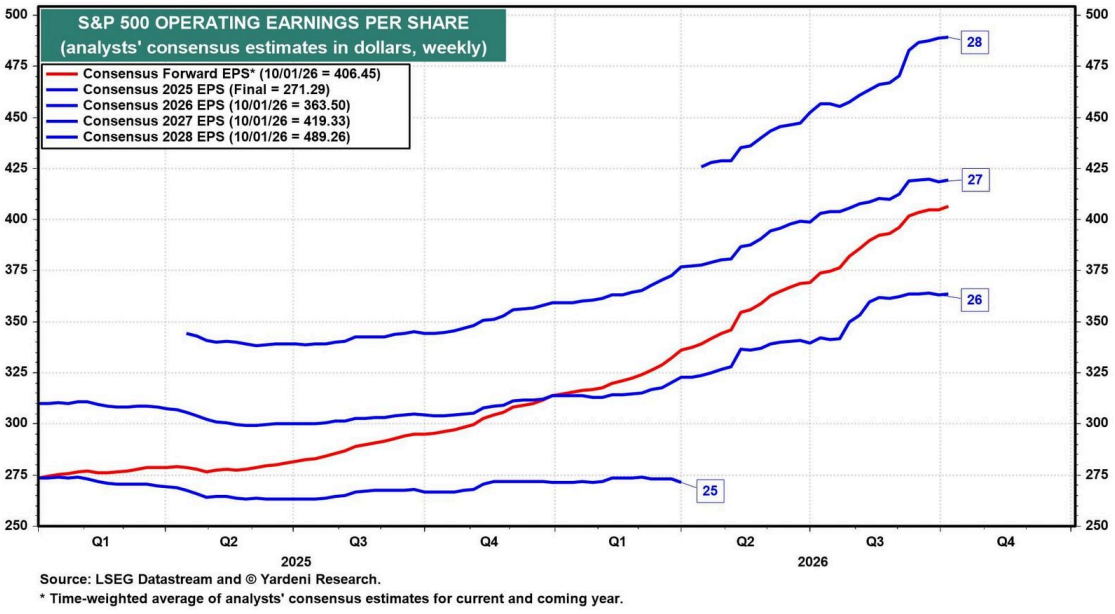
We are now seven years into our Roaring 2020s thesis, which remains our base case for the rest of the decade, and it has played out very well so far. When we first introduced the idea in August 2020, the prospect of another Roaring '20s sounded a bit delusional. We argued that, as in the

1920s, rapidly proliferating technologies would drive a productivity boom that would support stronger economic growth while containing inflation, boosting real wages, widening profit margins, and lifting corporate earnings.

Since the beginning of the current decade, the economy's resilience has repeatedly defied the naysayers, as productivity growth has increased and corporate earnings have continued to climb. With only three full years left in the decade, one of the clearest manifestations of our Roaring 2020s thesis has been what we call FEMO, or Fabulous Earnings Momentum.

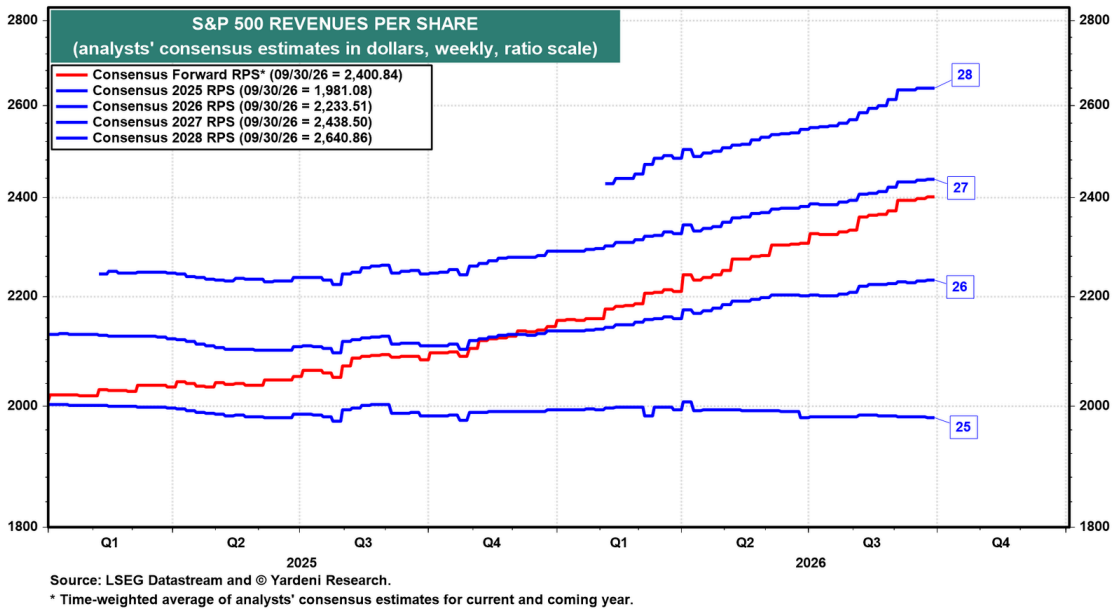
FEMO is clearly visible in industry analysts' earnings expectations. They currently expect S&P 500 operating earnings per share to rise to about $364 per share in 2026 and $419 in 2027, implying growth of roughly 15% in both years (chart). Toward the end of Q3 each year, we add another year to our Earnings Squiggles framework. This year’s addition is 2028, with earnings projected to rise another 17% that year to about $489 per share.

For now, the analysts are more bullish than we are about earnings prospects over the remainder of the decade. We are projecting $450 per share in 2028, $475 in 2029, and $500 in 2030. If they are right, our S&P 500 target of 10,000 will be achieved well before the end of 2029!

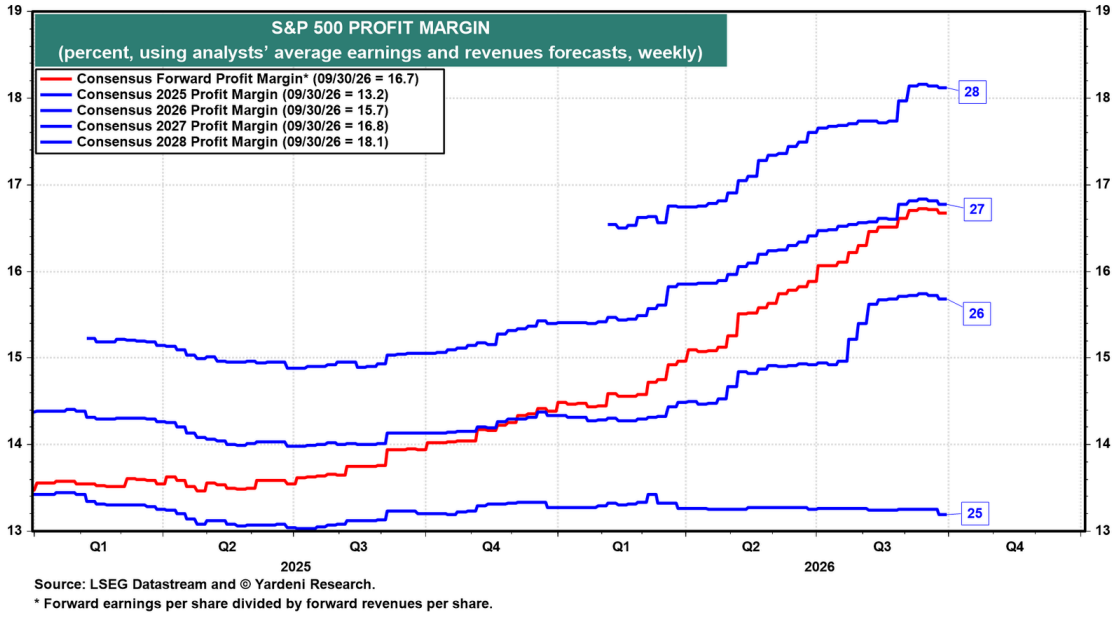


The extended earnings boom is driven by strong revenue growth expectations. Industry analysts expect S&P 500 revenues per share to

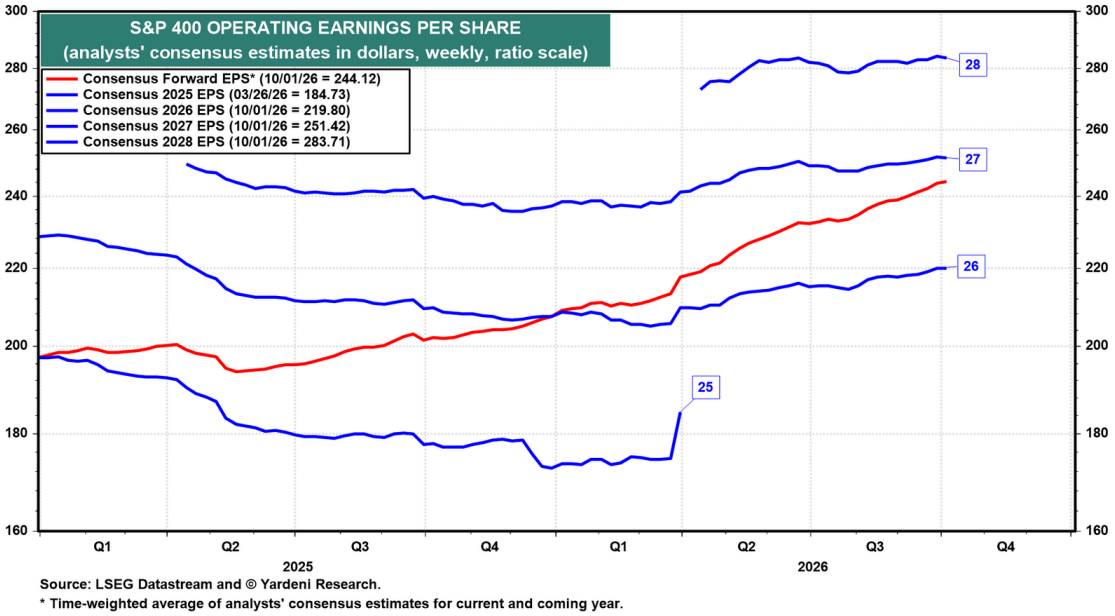
rise 12.7% in 2026, 9.2% in 2027, and another 8.3% in 2028 (chart). Those expectations seem too exuberant to us.



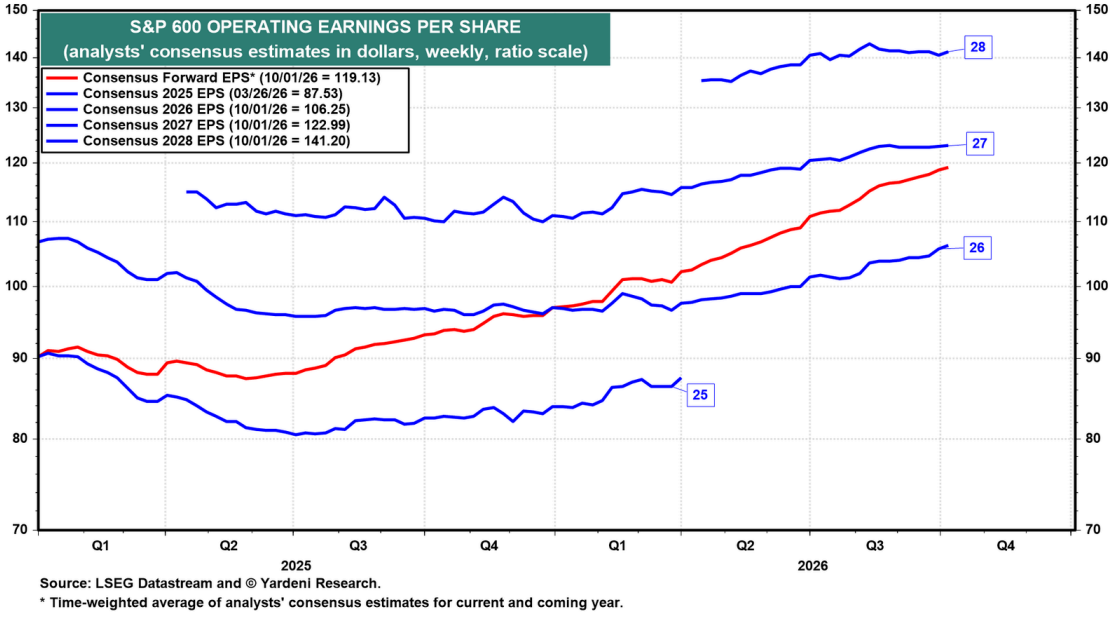
Profit margins provide the other driver of the earnings story. Analysts expect the S&P 500 profit margin to rise from 13.2% in 2025 to 15.7% this year, 16.8% in 2027, and a record 18.1% in 2028 (chart). That is what we would expect in our Roaring 2020s scenario, with stronger productivity growth widening profit margins.



The earnings outlook is strong beyond the S&P 500 as well. Industry analysts expect S&P 400 MidCap operating earnings per share to rise roughly 19% in 2026, 14% in 2027, and 13% in 2028 (chart).

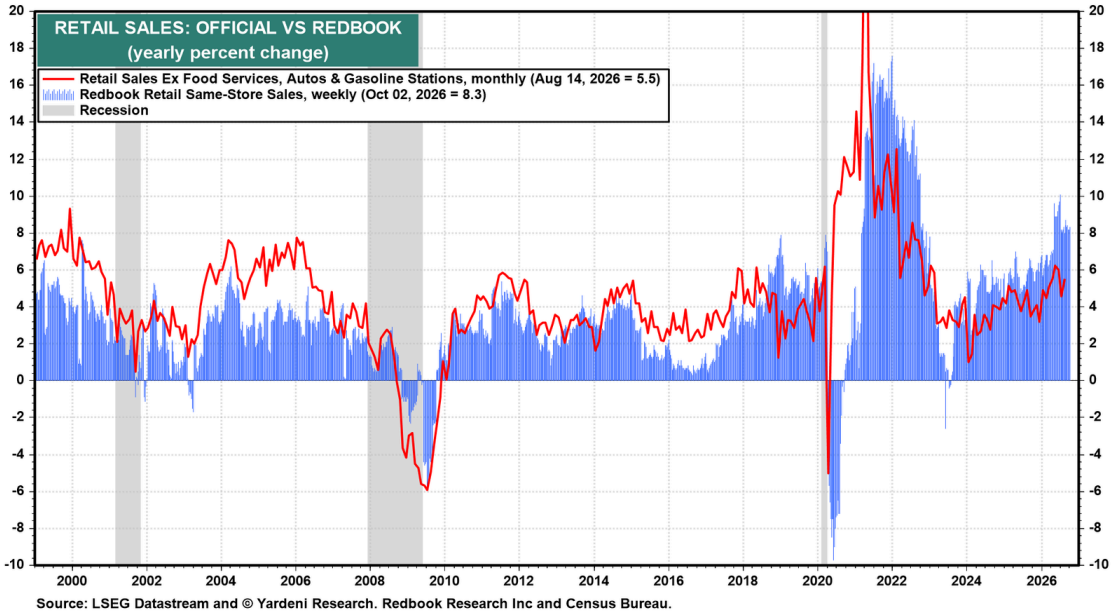


S&P 600 SmallCap earnings are expected to increase about 21% this year, 16% in 2027, and 15% in 2028 (chart). That suggests FEMO is broad-based.

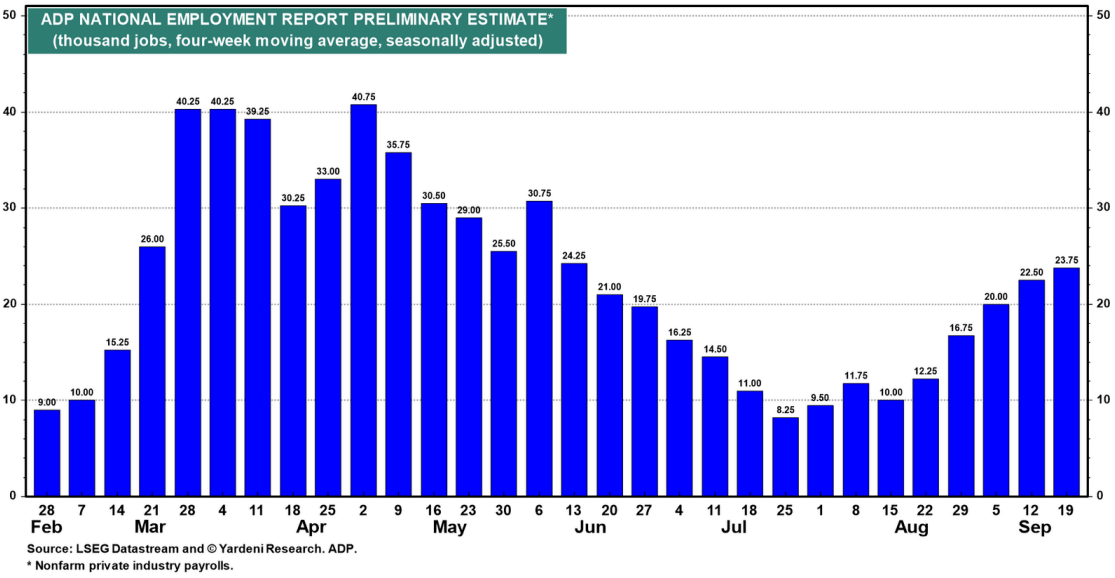


II. Blue skies ahead for the economy?

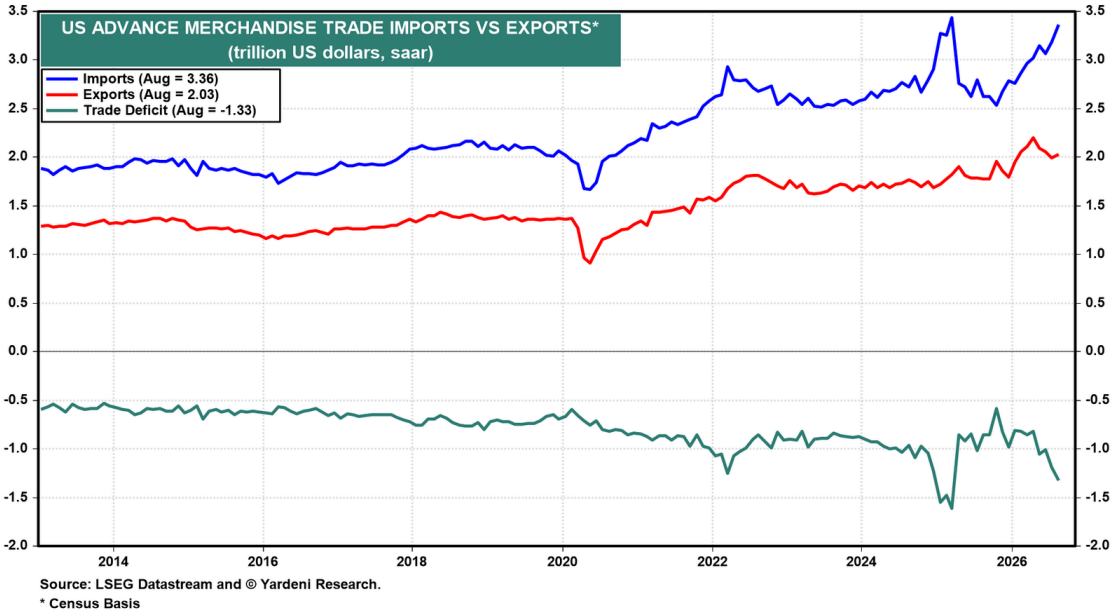
(1) Consumer spending. The latest Redbook data provide yet another sign of continued strength in consumer spending. Redbook same-store sales rose 8.3% y/y during the week of October 2, well above the 5.8% average for 2025 and underscoring the consumer's continued resilience (chart).



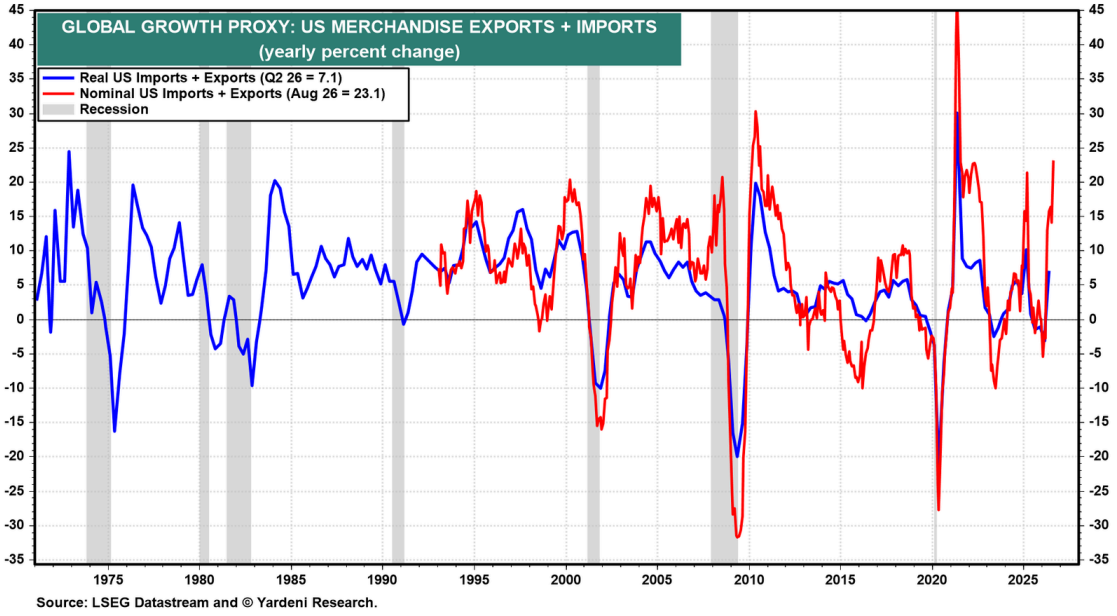
(2) Labor market. ADP estimates that private-sector payrolls rose 23,750 in the week through September 19, up from an upwardly revised 22,500 the prior week and marking the fifth consecutive acceleration in weekly job gains (chart). It was also the strongest weekly increase in three months. The ADP numbers for private industry payrolls make more sense to us than the Bureau of Labor Statistics' payroll employment data.



(3) Trade balance. The latest US trade data point to still strong US and global economic growth. US imports rose 4.3% m/m and 23.6% y/y in August, accelerating from July, while US exports increased 1.4% m/m and 12.3% y/y. Imports reached a $3.36 trillion annualized rate, versus $2.03 trillion for exports, leaving a merchandise trade deficit of $1.33 trillion annualized (chart). The gap reflects exceptionally strong US demand for imported goods.



Nominal and real US merchandise exports plus imports rose 23.1% y/y and 7.1%, respectively, in August (chart). That suggests global trade remains firmly in expansion territory and is consistent with strong global economic growth.



Selected technology imports reached a record $56.6 billion in August (chart). The AI buildout is highly import-intensive and requires large volumes of semiconductors, servers, networking equipment, and other hardware produced overseas.

Chroma ATE (2360.TW)

3Q26 Another Strong Beat; September Revenue 3x YoY

CITI'S TAKE

Chroma ATE reported Sep revenue that tripled YoY to NT$6,860mn (+22% MoM), concluding 3Q26 with revenue of NT$17,926mn (+180% YoY/+32% QoQ), another quarterly record and beating Street/Citi estimates by 23%/25%, respectively. We believe the robust revenue was mainly driven by datacenter power testers (HDVC, China's ESS build) and photonics (CPO ramp-up), and the 3Q revenue beat suggests upside to Street estimates for FY26 and FY27. Looking ahead, we expect robust AI-driven revenue growth to continue for Chroma across segments, including power tester (HVDC), SLT (GPU & ASIC), metrology (CoWoS, panel), and photonics. CPO shipment remains at an early stage and could expand several times next year. New products in metrology, FT handler, burn-in system could see more meaningful contribution starting 2027. We maintain our positive view and Buy rating for Chroma.

Chroma ATE (2360.TW): 2Q Beat on Non-Op, Positive Outlook Intact

Chroma ATE

Valuation

Our target price of NT$2,500 is based on 40x 2027E P/E, at close to 1x PEG. Chroma shares have re-rated above its historical range as its growth outlook is now strongly tied to AI infrastructure build out. We estimate 60%+ of its revenue is now AI-related, with strong growth across product segments including power testers, SLT, metrology, and photonics. Chroma has a commanding market share in most of these segments and should be well positioned to capitalize on the global AI expansion.

Risks

Downside risks to achieving our target price include: 1) softer AI/CPO growth expectation due to changes in capex outlook or production bottleneck; 2) fewer SLT needed as a result of shortened cycle time as GPU yield rate improves; 3) disappointing metrology shipment due to changes at ramp-up schedule; 4) testing process change leading to loss in market share; 5) FX risks (50-60% of Chroma's sales are in US$, 10-20% in Rmb).

If you are visually impaired and would like to speak to a Citi representative regarding the details of the graphics in this document, please call USA 1-888-500-5008 (TTY: 711), from outside the US +1-210-677-3788

Appendix A-1

ANALYST CERTIFICATION

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm").

Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For financial instruments recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in such financial instruments (and any underlying instruments) and may act as principal in connection with transactions in such instruments. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

Unless stated otherwise neither the Research Analyst nor any member of their team has viewed the material operations of the Companies for which an investment view has been provided within the past 12 months.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 6th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			Catalyst Watch		
Data current as of 01 Oct 2026	**Buy**	**Hold**	**Sell**	**Buy**	**Hold**	**Sell**
Citi Research Global Fundamental Coverage (Neutral=Hold)	61%	32%	7%	36%	48%	16%
% of companies in each rating category that are investment banking clients	39%	43%	30%	42%	38%	36%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks. **Risk rating** takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The target price is based on a 12 month time horizon. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Citi Research may suspend its rating and target price and assign “Rating Suspended” status for regulatory and/or internal policy reasons. Citi Research may also suspend its rating and target price and assign "Under Review" status for other exceptional circumstances (e.g. lack of information critical to the analyst's thesis, trading suspension) affecting the company and/or trading in the company's securities. In both such situations, the rating and target price will show as “—“ and “-“ respectively in the rating history price chart. Prior to 11 April 2022 Citi Research assigned “Under Review” status to both situations and prior to 11 Nov 2020 only in exceptional circumstances. As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Catalyst Watch/Short Term Views (“STV”) Ratings Disclosure:
Catalyst Watch and STV Upside/Downside calls: Citi Research may also include a Catalyst Watch or STV Upside or Downside call to indicate the analyst expects the share price to rise (fall) in absolute terms over a specified period of 30 or 90 days in reaction to one or more specific near-term catalysts or events impacting the company or the market. A Catalyst Watch will be published when Analyst confidence is high that an impact to share price will occur; it will be a STV when confidence level is moderate. A Catalyst Watch or STV Upside/Downside call will automatically expire at the end of the specified 30/90 day period. The Catalyst Watch will also be automatically removed if share price performance (calculated at market close) exceeds 15% against the direction of the call (unless over-ridden by the analyst). The analyst may also remove a Catalyst Watch or STV call prior to the end of the specified period in a published research note. A Catalyst Watch/STV Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch/STV Upside call corresponds to a

buy recommendation and a Catalyst Watch/STV Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside, Catalyst Watch Downside, STV Upside, or STV Downside call is considered Catalyst Watch/STV No View. For purposes of FINRA ratings distribution-disclosure rules, we correspond Catalyst Watch/STV No View to Hold in our ratings distribution table for our Catalyst Watch/STV Upside/Downside rating system. However, we reiterate that we do not consider No View to be a recommendation. For all Catalyst Watch/STV Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

Privately held companies:

The legal entities through which Citi conducts its business do not permit investment research recommendations, ratings, target prices, or estimates on any privately held companies ("private companies") referenced herein. Citi Research does not utilize a rating system for private companies. Any information on private companies in this report is based on generally available information and, although obtained from sources believed by Citi to be reliable, its accuracy and completeness are not guaranteed. Private companies are generally not subject to reporting obligations, which may result in less publicly available information. The information contained in this report may differ from information a private company may subsequently make public or otherwise share with investors. Continuation of publishing private company reports or private company sections within reports is at Citi's discretion, in accordance with internal policies.

RESEARCH ANALYST AFFILIATIONS / NON-US RESEARCH ANALYST DISCLOSURES

The legal entities employing the authors of this report are listed below (and their regulators are listed further herein). Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization (but are employed by an affiliate of the member organization) and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Citigroup Global Markets Asia Limited	Karen Huang; Kevin Chen; Kyna Wong; Yiming Li, CFA

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

Regulations in various jurisdictions require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

Citi Research has implemented policies for identifying, considering and managing potential conflicts of interest arising as a result of publication or distribution of investment research. A description of these policies can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows; Q2 2026 Buy 33%(63%), Hold 44% (51%), Sell 23% (49%), RV 0.5% (87%): Q1 2026 Buy 33% (63%), Hold 44% (52%), Sell 23% (46%), RV 0.5% (89%); Q4 2025 Buy 33% (63%), Hold 44% (50%), Sell 23% (46%), RV 0.4% (91%); Q3 2025 Buy 33%(61%), Hold 44% (52%), Sell 23% (50%), RV 0.4% (80%). For the purposes of disclosing recommendations other than for equity (whose definitions can be found in the corresponding disclosure sections), "Buy" means a positive directional trade idea; "Sell" means a negative directional trade idea; and "Relative Value" means any trade idea which does not have a clear direction to the investment strategy.

European regulations require a 5 year price history when past performance of a security is referenced. CitiVelocity's Charting Tool (https://www.citivelocity.com/cv2/#go/CHARTING_3_Equities) provides the facility to create customisable price charts including a five year option. This tool can be found in the Data & Analytics section under any of the asset class menus in CitiVelocity (https://www.citivelocity.com/). For further information contact CitiVelocity support (https://www.citivelocity.com/cv2/go/CLIENT_SUPPORT). The source for all referenced prices, unless otherwise stated, is DataCentral, which sources price information from LSEG Data & Analytics. Past performance is not a guarantee or reliable indicator of future results. Forecasts are not a guarantee or reliable indicator of future performance.

Investors should always consider the investment objectives, risks, and charges and expenses of an ETF carefully before investing. The applicable prospectus and key investor information document (as applicable) for an ETF should contain this and other information about such ETF. It is important to read carefully any such prospectus before investing. Clients may obtain prospectuses and key investor information documents for ETFs from the applicable distributor or authorized participant, the exchange upon which an ETF is listed and/or from the applicable website of the applicable ETF issuer. The value of the investments and any accruing income may fall or rise. Any past performance, prediction or forecast is not indicative of future or likely performance. Any information on ETFs contained herein is provided strictly for illustrative purposes and should not be deemed an offer to sell or a solicitation of an offer to purchase units of any ETF either explicitly or implicitly. The opinions expressed are those of the authors and do not necessarily reflect the views of ETF issuers, any of their agents or their affiliates.

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Please be advised that pursuant to Executive Order 13959 as amended (the “Order”), U.S. persons are prohibited from investing in securities of any company determined by the United States Government to be the subject of the Order. This research is not intended to be used or relied upon in any way that could result in a violation of the Order. Investors are encouraged to rely upon their own legal counsel for advice on compliance with the Order and other economic sanctions programs administered and enforced by the Office of Foreign Assets Control of the U.S. Treasury Department.

This communication is directed at persons who are "Eligible Clients" as such term is defined in the Israeli Regulation of Investment Advice, Investment Marketing and Investment Portfolio Management law, 1995 (the "Advisory Law"). Within Israel, this communication is not intended for retail clients and Citi will not make such products or transactions available to retail clients or to non-Eligible Clients. The presenter is not licensed as investment advisor or investment marketer by the Israeli Securities Authority (“ISA”) and this communication does not constitute investment or marketing advice. The information contained herein may relate to matters that are not regulated by the ISA. Any securities which are the subject of this communication may not be offered or sold to any Israeli person except pursuant to a security offering exemption according to the Israeli Securities Law, 1968and the public offering rules provided thereunder.

Citi Research broadly and simultaneously disseminates its research content to the Firm’s institutional and retail clients via the Firm’s proprietary electronic distribution platforms (e.g., Citi Velocity and various Global Wealth platforms). As a convenience, certain, but not all, research content may be distributed through third party aggregators. Clients may receive published research reports by email, on a discretionary basis, and only after such research content has been broadly disseminated. Certain research is made available only to institutional investors to satisfy regulatory requirements. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client’s individual preferences as to the frequency and manner of receiving communications from analysts, the client’s risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Resolução 20 and ASIC Regulatory Guide 264, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. Statements and views concerning ESG (environmental, social, governance) factors are typically based upon public statements made by the affected company or other public news, which the author may not have independently verified. ESG factors are one consideration that investors may choose to examine when making investment decisions. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Where a component of a published trade idea is subject to a restriction, the trade idea will be removed from any list of open trade ideas included in the Product. Upon the lifting of the restriction, the trade idea will either be re-instated in the open trade ideas list if the analyst continues to support it or it will be officially closed. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less

liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

The Citigroup legal entity that takes responsibility for the production of the Product is the legal entity which the first named author is employed by.

The Product is not to be construed as providing investment services in any jurisdiction where the provision of such services would not be permitted.
Subject to the nature and contents of the Product, the investments described therein are subject to fluctuations in price and/or value and investors may get back less than originally invested. Certain high-volatility investments can be subject to sudden and large falls in value that could equal or exceed the amount invested.The yield and average life of CMOs (collateralized mortgage obligations) referenced in this Product will fluctuate depending on the actual rate at which mortgage holders prepay the mortgages underlying the CMO and changes in current interest rates. Any government agency backing of the CMO applies only to the face value of the CMO and not to any premium paid. Certain investments contained in the Product may have tax implications for private customers whereby levels and basis of taxation may be subject to change. If in doubt, investors should seek advice from a tax adviser. The Product does not purport to identify the nature of the specific market or other risks associated with a particular transaction. Advice in the Product is general and should not be construed as personal advice given it has been prepared without taking account of the objectives, financial situation or needs of any particular investor. Accordingly, investors should, before acting on the advice, consider the appropriateness of the advice, having regard to their objectives, financial situation and needs. Prior to acquiring any financial product, it is the client's responsibility to obtain the relevant offer document for the product and consider it before making a decision as to whether to purchase the product.

Card Insights. Where this report references Card Insights data, Card Insights consists of selected data from a subset of Citi’s proprietary credit card transactions. Such data has undergone rigorous security protocols to keep all customer information confidential and secure; the data is highly aggregated and anonymized so that all unique customer identifiable information is removed from the data prior to receipt by the report’s author or distribution to external parties. This data should be considered in the context of other economic indicators and publicly available information. Further, the selected data represents only a subset of Citi’s proprietary credit card transactions due to the selection methodology or other limitations and should not be considered as indicative or predictive of the past or future financial performance of Citi or its credit card business.

Citi Research product may source data from dataCentral. dataCentral is a Citi Research proprietary database, which includes the Firm's estimates, data from company reports and feeds from LSEG Data & Analytics. The source for all referenced prices, unless otherwise stated, is DataCentral. Past performance is not a guarantee or reliable indicator of future results. Forecasts are not a guarantee or reliable indicator of future performance. The printed and printable version of the research report may not include all the information <(e.g. certain financial summary information and comparable company data) that is linked to the online version available on the Firm's proprietary electronic distribution platforms.

WinWay Technology (6515.TW)

Sep-26 Sales Dip on Probe Card, Mix Shift to Support Margins

CITI'S TAKE

WinWay reported Sep-26 revenues of NT$1.25bn (-27% MoM/+88% YoY). QTD 3Q26 revenues of NT$4.56bn (+29% QoQ/+153% YoY) beat Citi/cons forecasts by 3%/7%, on robust AI/HPC test interface demand. The MoM decline was mainly driven by lower probe card revenues as major project shipments have temporarily wrapped up, and we expect probe card contribution to stay light in 4Q26E. While this may weigh on the top line near term, we see margins could recover gradually as product mix improves alongside the continued AI GPU and ASIC socket ramp. In the long term, we continue to favor WinWay as a core beneficiary of rising testing complexity for advanced chips across diverse platforms. Reiterate Buy/High Risk.

Buy / High Risk	
Price (06 Oct 26 13:30)	NT$6,130.00
Target price	NT$11,500.00
Expected share price return	87.6%
Expected dividend yield	1.1%
Expected total return	88.7%
Market Cap	NT$223,407M
	US$7,041M

WinWay Technology

Valuation

We value WinWay using a PE-based approach that factors in earnings momentum and likely expansion of its addressable market. Our target price of NT$11,500 is derived from applying c.41x to 2H27E-1H28E EPS, higher than the upper end of its long-term PE range, which we believe is justified given the company's entrenched position in the high-end AI GPU testing supply chain, rising contribution from coaxial socket and SLT solutions, and the increasing value of test content per module. With these structural drivers in place, and as we believe the market is starting to value it as an AI/HPC play (rather than a consumer electronics stock), we expect the multiple to hold at a premium relative to its historical averages.

Risks

Our quant rating system rates the WinWay stock High Risk based on its historical volatility.

Key downside risks that could impede the stock from reaching our target price and our earnings forecasts include: 1) client and sector concentration – specifically any delays in US AI GPU product roadmap could impact the business outlook for WinWay; 2) intensifying competition in coaxial and hypersockets from global peers; 3) faster-than-expected testing algorithm optimization, which could shorten testing durations and reduce the anticipated hardware demand multiplier; and 4) delay of MEMS Phase 2 mass production.

Appendix A-1

ANALYST CERTIFICATION

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Citigroup Global Markets Inc. or its affiliates received compensation for products and services other than investment banking services from WinWay Technology in the past 12 months.

Citigroup Global Markets Inc. or its affiliates currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: WinWay Technology.

Citigroup Global Markets Inc. or its affiliates currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: WinWay Technology.

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm"). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For financial instruments recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in such financial instruments (and any underlying instruments) and may act as principal in connection with transactions in such instruments. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

Unless stated otherwise neither the Research Analyst nor any member of their team has viewed the material operations of the Companies for which an investment view has been provided within the past 12 months.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 6th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			Catalyst Watch		
Data current as of 01 Oct 2026	**Buy**	**Hold**	**Sell**	**Buy**	**Hold**	**Sell**
Citi Research Global Fundamental Coverage (Neutral=Hold)	61%	32%	7%	36%	48%	16%
% of companies in each rating category that are investment banking clients	39%	43%	30%	42%	38%	36%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The target price is based on a 12 month time horizon. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Citi Research may suspend its rating and target price and assign "Rating Suspended" status for regulatory and/or internal policy reasons. Citi Research may also suspend its rating and target price and assign "Under Review" status for other exceptional circumstances (e.g. lack of information critical to the analyst's thesis, trading suspension) affecting the company and/or trading in the company's securities. In both such situations, the rating and target price will show as "—" and "-" respectively in the rating history price chart. Prior to 11 April 2022 Citi Research assigned "Under Review" status to both situations and prior to 11 Nov 2020 only in exceptional circumstances. As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Catalyst Watch/Short Term Views ("STV") Ratings Disclosure:
Catalyst Watch and STV Upside/Downside calls: Citi Research may also include a Catalyst Watch or STV Upside or Downside call to indicate the analyst expects the share price to rise (fall) in absolute terms over a specified period of 30 or 90 days in reaction to one or more specific near-term catalysts or events impacting the company or the market. A Catalyst Watch will be published when Analyst confidence is high that an impact to share price will occur; it will be a STV when confidence level is moderate. A Catalyst Watch or STV Upside/Downside call will automatically expire at the end of the specified 30/90 day period. The Catalyst Watch will also be automatically removed if share price performance (calculated at market close) exceeds

15% against the direction of the call (unless over-ridden by the analyst). The analyst may also remove a Catalyst Watch or STV call prior to the end of the specified period in a published research note. A Catalyst Watch/STV Upside or Downside call may be different from and does not affect a stock's fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch/STV Upside call corresponds to a buy recommendation and a Catalyst Watch/STV Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside, Catalyst Watch Downside, STV Upside, or STV Downside call is considered Catalyst Watch/STV No View. For purposes of FINRA ratings distribution-disclosure rules, we correspond Catalyst Watch/STV No View to Hold in our ratings distribution table for our Catalyst Watch/STV Upside/Downside rating system. However, we reiterate that we do not consider No View to be a recommendation. For all Catalyst Watch/STV Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

Privately held companies:

The legal entities through which Citi conducts its business do not permit investment research recommendations, ratings, target prices, or estimates on any privately held companies ("private companies") referenced herein. Citi Research does not utilize a rating system for private companies. Any information on private companies in this report is based on generally available information and, although obtained from sources believed by Citi to be reliable, its accuracy and completeness are not guaranteed. Private companies are generally not subject to reporting obligations, which may result in less publicly available information. The information contained in this report may differ from information a private company may subsequently make public or otherwise share with investors. Continuation of publishing private company reports or private company sections within reports is at Citi's discretion, in accordance with internal policies.

RESEARCH ANALYST AFFILIATIONS / NON-US RESEARCH ANALYST DISCLOSURES

The legal entities employing the authors of this report are listed below (and their regulators are listed further herein). Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization (but are employed by an affiliate of the member organization) and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Citigroup Global Markets Taiwan Securities Company Limited	Jack Chen; Michael Hung; Laura (Chia Yi) Chen; Nicholas Lai

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

Regulations in various jurisdictions require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

Citi Research has implemented policies for identifying, considering and managing potential conflicts of interest arising as a result of publication or distribution of investment research. A description of these policies can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows; Q2 2026 Buy 33%(63%), Hold 44% (51%), Sell 23% (49%), RV 0.5% (87%): Q1 2026 Buy 33% (63%), Hold 44% (52%), Sell 23% (46%), RV 0.5% (89%); Q4 2025 Buy 33% (63%), Hold 44% (50%), Sell 23% (46%), RV 0.4% (91%); Q3 2025 Buy 33%(61%), Hold 44% (52%), Sell 23% (50%), RV 0.4% (80%). For the purposes of disclosing recommendations other than for equity (whose definitions can be found in the corresponding disclosure sections), "Buy" means a positive directional trade idea; "Sell" means a negative directional trade idea; and "Relative Value" means any trade idea which does not have a clear direction to the investment strategy.

European regulations require a 5 year price history when past performance of a security is referenced. CitiVelocity's Charting Tool (https://www.citivelocity.com/cv2/#go/CHARTING_3_Equities) provides the facility to create customisable price charts including a five year option. This tool can be found in the Data & Analytics section under any of the asset class menus in CitiVelocity (https://www.citivelocity.com/). For further information contact CitiVelocity support (https://www.citivelocity.com/cv2/go/CLIENT_SUPPORT). The source for all referenced prices, unless otherwise stated, is DataCentral, which sources price information from LSEG Data & Analytics. Past performance is not a guarantee or reliable indicator of future results. Forecasts are not a guarantee or reliable indicator of future performance.

Investors should always consider the investment objectives, risks, and charges and expenses of an ETF carefully before investing. The applicable prospectus and key investor information document (as applicable) for an ETF should contain this and other information about such ETF. It is important to read carefully any such prospectus before investing. Clients may obtain prospectuses and key investor information documents for ETFs from the applicable distributor or authorized participant, the exchange upon which an ETF is listed and/or from the applicable website of the applicable ETF issuer. The value of the investments and any accruing income may fall or rise. Any past performance, prediction or forecast is not indicative of future or

likely performance. Any information on ETFs contained herein is provided strictly for illustrative purposes and should not be deemed an offer to sell or a solicitation of an offer to purchase units of any ETF either explicitly or implicitly. The opinions expressed are those of the authors and do not necessarily reflect the views of ETF issuers, any of their agents or their affiliates.

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Please be advised that pursuant to Executive Order 13959 as amended (the “Order”), U.S. persons are prohibited from investing in securities of any company determined by the United States Government to be the subject of the Order. This research is not intended to be used or relied upon in any way that could result in a violation of the Order. Investors are encouraged to rely upon their own legal counsel for advice on compliance with the Order and other economic sanctions programs administered and enforced by the Office of Foreign Assets Control of the U.S. Treasury Department.

This communication is directed at persons who are "Eligible Clients" as such term is defined in the Israeli Regulation of Investment Advice, Investment Marketing and Investment Portfolio Management law, 1995 (the "Advisory Law"). Within Israel, this communication is not intended for retail clients and Citi will not make such products or transactions available to retail clients or to non-Eligible Clients. The presenter is not licensed as investment advisor or investment marketer by the Israeli Securities Authority (“ISA”) and this communication does not constitute investment or marketing advice. The information contained herein may relate to matters that are not regulated by the ISA. Any securities which are the subject of this communication may not be offered or sold to any Israeli person except pursuant to a security offering exemption according to the Israeli Securities Law, 1968and the public offering rules provided thereunder.

Citi Research broadly and simultaneously disseminates its research content to the Firm’s institutional and retail clients via the Firm’s proprietary electronic distribution platforms (e.g., Citi Velocity and various Global Wealth platforms). As a convenience, certain, but not all, research content may be distributed through third party aggregators. Clients may receive published research reports by email, on a discretionary basis, and only after such research content has been broadly disseminated. Certain research is made available only to institutional investors to satisfy regulatory requirements. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client’s individual preferences as to the frequency and manner of receiving communications from analysts, the client’s risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Resolução 20 and ASIC Regulatory Guide 264, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. Statements and views concerning ESG (environmental, social, governance) factors are typically based upon public statements made by the affected company or other public news, which the author may not have independently verified. ESG factors are one consideration that investors may choose to examine when making investment decisions. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Where a component of a published trade idea is subject to a restriction, the trade idea will be removed from any list of open trade ideas included in the Product. Upon the lifting of the restriction, the trade idea will either be re-instated in the open trade ideas list if the analyst continues to support it or it will be officially closed. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

The Citigroup legal entity that takes responsibility for the production of the Product is the legal entity which the first named author is employed by.

Pursuant to the applicable laws and regulations in the Republic of China (Taiwan), the recipient of the Product shall not take advantage of such Product to involve in any matters in which the recipient may have conflicts of interest. If the Product covers securities which are not allowed to be offered or traded in the Republic of China (Taiwan), neither the Product nor any information contained in the Product shall be considered as advertising the securities or making recommendation of the securities in the Republic of China (Taiwan). The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security or financial products. Any decision to purchase securities or financial products mentioned in the Product must take into account existing public information on such security or the financial products or any registered prospectus.

The Product is made available in **Thailand** through Citicorp Securities (Thailand) Ltd., which is regulated by the Securities and Exchange Commission of Thailand. 399 Interchange 21 Building, 18th Floor, Sukhumvit Road, Klongtoey Nua, Wattana ,Bangkok 10110, Thailand.

Disclosure for investors in the Republic of Turkey: The Product is made available in **Turkey** through Citibank AS which is regulated by Capital Markets Board. Tekfen Tower, Eski Buyukdere Caddesi # 209 Kat 2B, 23294 Levent, Istanbul, Turkey. Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and recommendations stated here, are not within the scope of investment advisory activity. Comments and recommendations stated here rely on the individual opinions of the ones providing these comments and recommendations. These opinions may not fit to your financial status, risk and return preferences. For this reason, to make an investment decision by relying solely to this information stated here may not bring about outcomes that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the "Firm"), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report, however investors should also note that the Firm has in place organisational and administrative arrangements to manage potential conflicts of interest of this nature.

In the **U.A.E**, these materials (the "Materials") are communicated byCitigroup Global Markets Limited, DIFC branch ("CGML"), an entityregistered in the Dubai International Financial Center ("DIFC") andlicensed and regulated by the Dubai Financial Services Authority ("DFSA",license #CL0221) to Professional Clients and Market Counterparties, as definedin DFSA regulations, only and should not be relied upon or distributed toRetail Clients. Financial products and/or services to which the Materialsrelate will only be made available to Professional Clients and MarketCounterparties. Citigroup Global Markets Limited DIFC Branch registered addressis Level 3, Gate District Building 02, Dubai International Financial Centre andcan be contacted on +971 4 509 97 90.

The Product is made available in **United Kingdom** by Citigroup Global Markets Limited, which is authorised by the Prudential Regulation Authority ("PRA") and regulated by the Financial Conduct Authority ("FCA") and the PRA. This material may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the PRA nor regulated by the FCA and the PRA and further details as to where this may be the case are available upon request in respect of this material. Citigroup Centre, Canada Square, Canary Wharf, London, E14 5LB.

The Product is made available in **United States** and **Canada** by Citigroup Global Markets Inc., which is a member of FINRA and registered with the US Securities and Exchange Commission. 388 Greenwich Street, New York, NY 10013.

Unless specified to the contrary, within EU Member States, the Product is made available by Citigroup Global Markets Europe AG ("CGME"), which is regulated by the European Central Bank and the German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht-BaFin).

The Product is not to be construed as providing investment services in any jurisdiction where the provision of such services would not be permitted.

Subject to the nature and contents of the Product, the investments described therein are subject to fluctuations in price and/or value and investors may get back less than originally invested. Certain high-volatility investments can be subject to sudden and large falls in value that could equal or exceed the amount invested.The yield and average life of CMOs (collateralized mortgage obligations) referenced in this Product will fluctuate depending on the actual rate at which mortgage holders prepay the mortgages underlying the CMO and changes in current interest rates. Any government agency backing of the CMO applies only to the face value of the CMO and not to any premium paid. Certain investments contained in the Product may have tax implications for private customers whereby levels and basis of taxation may be subject to change. If in doubt, investors should seek advice from a tax adviser. The Product does not purport to identify the nature of the specific market or other risks associated with a particular transaction. Advice in the Product is general and should not be construed as personal advice given it has been prepared without taking account of the objectives, financial situation or needs of any particular investor. Accordingly, investors should, before acting on the advice, consider the appropriateness of the advice, having regard to their objectives, financial situation and needs. Prior to acquiring any financial product, it is the client's responsibility to obtain the relevant offer document for the product and consider it before making a decision as to whether to purchase the product.

Card Insights. Where this report references Card Insights data, Card Insights consists of selected data from a subset of Citi's proprietary credit card transactions. Such data has undergone rigorous security protocols to keep all customer information confidential and secure; the data is highly aggregated and anonymized so that all unique customer identifiable information is removed from the data prior to receipt by the report's author or distribution to external parties. This data should be considered in the context of other economic indicators and publicly available information. Further, the selected data represents only a subset of Citi's proprietary credit card transactions due to the selection methodology or other limitations and should not be considered as indicative or predictive of the past or future financial performance of Citi or its credit card business.

Buy (unchanged)

3Q26 results preview: several favourable trends ahead

- Rising high-end ABF substrate likely to drive blended ASP increase
- Multicore and optics likely to be the next growth drivers
- Reaffirming our Buy (1) call; raising 12M TP to TWD1,580

What's new: We believe an improving product mix, driven by rising Nvidia's CPU contribution, to be a key near-term share price catalyst.

What's the impact: **Near-term update.** After Kinsus released its August preliminary results on 23 September, we note that we had underestimated the 3Q26E gross margin expansion on product optimisation and price hike scale. The results imply a GM of 33% in August (vs. 26% in 2Q26). We therefore lift our 3Q-4Q26E gross margin to 33.2-35.1% (from 28.9-30.3%) to reflect an improving product mix, including greater CPU substrate contribution. We believe the gross margin of high-end chipset substrate may be c.50%, supporting margin expansion. We also expect a c.10% QoQ price hike for both BT and ABF substrate in 3Q26, above Kinsus' guidance of a high-single-digit% QoQ, making these substrates the other growth driver. We see further gross margin expansion in 2027-28 on the ongoing price hike trend and increasing high-end ABF substrate product mix.

Business outlook. We believe several favourable trends lie ahead. First, we see a rising contribution from high-end GPU and CPU ABF substrates. We believe Nvidia's CPU currently accounts for 5-10% of total revenue, with Kinsus holding a 70-80% market share. We also expect Kinsus to acquire a teens% market share in AMD's Venice, which should gradually ramp up from 4Q26. These will likely become key growth drivers of the ABF substrate segment in 2027, in our view. We believe the ramp-up progress for GPU substrate for these two clients is slightly slower than that for CPU. Second, we believe Kinsus will benefit from the rising BT substrate demand for optical transceivers. In our view, migration to on-board optics (OBO) and NPO/CPO will require ABF substrate beneath the optics engine (OE) in OBO; the OE and IC will need a bigger ABF substrate as we move to the NPO/CPO generation. As such, we expect the total ABF substrate demand to increase with rising adoption of optics in AI servers. Lastly, we expect the adoption of multiple-core ABF from 2028 to improve the rigidity and transmission performance before the official launch of ceramic and glass-core substrate, which we expect to increase the ABF TAM as well.

What we recommend: We raise our 2026-28E earnings by 19-29% to reflect the better-than-expected gross margin in August. We reaffirm our Buy (1) call and raise our 12M TP to TWD1,580, based on an unchanged target PER of 36x (high end of 3-year-trading range of 10-36x), applied to the 1-year-forward EPS forecast. Key downside risks: weaker-than-expected demand for memory, PCs, gaming GPUs or AI servers.

How we differ: Our 2026-28E EPS are 27-57% above the Bloomberg consensus, likely on our more bullish view on its gross margin expansion.

Company profile

Kinsus was founded in 2000 as a subsidiary of Asustek. The company mainly focus on niche ball grid array (BGA) substrates to avoid price competition among mainstream products like graphics card and chipsets, and it has become top-3 flip chip manufacturer in global. Besides, its manufacturing sites are based in Taiwan and mainland China.

ESG analysis

ESG risks

Risks		Management	Analyst comments
G	Executive/board quality	2	Kinsus's leadership team comprises experienced professionals dedicated to steering the company towards sustainable growth. This diverse board composition ensures a comprehensive range of expertise and perspectives, contributing to Kinsus's strategic decision-making and corporate governamce.
	Capital management	2	Kinsus maintains a robust financial framework, ensuring the availability of resources necessary for operational efficiency and strategic investments. The company's financial health is regularly disclosed through annual reports, providing transparency to stakeholders.
	Related party & transaction	1	The company adheres to stringent corporate governance policies to manage related party transactions, ensuring transparency and compliance with regulatory standards. The company discloses such transactions in its financial reports, maintaining accountability and stakeholder trust. For instance, the company's annual general meeting documents provide details on related party transactions, ensuring transparency and accountability.
S	Supply chain management	1	Kinsus is committed to sustainable supply chain practices, emphasizing environmental, social, and governance considerations. The company has established comprehensive ESG policies, including commitments to labor standards, environmental health and safety, ethics, and conflict-free minerals. These policies guide the company's interactions with suppliers and partners, promoting sustainability throughout the supply chain.
E	Data security	3	The company recognizes the importance of information security in its operations. As part of its corporate governance framework, Kinsus is likely to implement standard data protection practices to safeguard sensitive information and ensure compliance with relevant regulations. Stakeholders are encouraged to consult the company's official communications or contact the company directly for detailed information on data security policies.

Note: Management score represents a company's ability to manage/benefit from certain ESG topics. The scores range from 1 to 3, with 1 being the strongest.

Bahrain

This research material is distributed in Bahrain by Daiwa Capital Markets Europe Limited, Bahrain Branch, regulated by The Central Bank of Bahrain and holds Investment Business Firm – Category 2 license and having its official place of business at the Bahrain World Trade Centre, South Tower, 7th floor, P.O. Box 30069, Manama, Kingdom of Bahrain. Tel No. +973 17534452 Fax No. +973 535113

United States

This research is distributed into the United States directly by Daiwa Capital Markets Hong Kong Limited (DCMHK) and in certain cases indirectly by Daiwa Capital Markets America Inc. (DCMA), a U.S. Securities and Exchange Commission registered broker-dealer and FINRA member firm, exclusively to "major U.S. institutional investors", as defined under Rule 15a-6 promulgated under the U.S. Securities Exchange Act of 1934, as amended, and as interpreted by the staff of the U.S. Securities and Exchange Commission (SEC). Where this is co-branded research published by Daiwa's partners in collaboration with other parties not affiliated with Daiwa, this research is distributed in the United States by DCMHK only. This report is not an offer to sell or the solicitation of any offer to buy securities. U.S. customers wishing to effect transactions in any designated investment discussed in this report should do so through a qualified salesperson of DCMA. Non-U.S. customers wishing to effect transactions in any designated investment discussed in this report should contact a Daiwa entity in their local jurisdiction. The securities or other investment products discussed in this report may not be eligible for sale in some jurisdictions.

Analysts employed outside the U.S., as specifically indicated elsewhere in this report, are not registered as research analysts with FINRA. These analysts may not be associated persons of DCMA, and therefore may not be subject to FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Japan - Notification items pursuant to Article 37 of the Financial Instruments and Exchange Law

(This Notification is only applicable to where report is distributed by Daiwa Securities Co. Ltd.)

If you decide to enter into a business arrangement with our company based on the information described in this report, we ask you to pay close attention to the following items.

- In addition to the purchase price of a financial instrument, our company will collect a trading commission* for each transaction as agreed beforehand with you. Since commissions may be included in the purchase price or may not be charged for certain transactions, we recommend that you confirm the commission for each transaction. In some cases, our company also may charge a maximum of ¥2 million per year as a standing proxy fee for our deposit of your securities, if you are a non-resident.
- For derivative and margin transactions etc., our company may require collateral or margin requirements in accordance with an agreement made beforehand with you. Ordinarily in such cases, the amount of the transaction will be in excess of the required collateral or margin requirements**.
- There is a risk that you will incur losses on your transactions due to changes in the market price of financial instruments based on fluctuations in interest rates, exchange rates, stock prices, real estate prices, commodity prices, and others. In addition, depending on the content of the transaction, the loss could exceed the amount of the collateral or margin requirements.
- There may be a difference between bid price etc. and ask price etc. of OTC derivatives handled by our company.
- Before engaging in any trading, please thoroughly confirm accounting and tax treatments regarding your trading in financial instruments with such experts as certified public accountants.

* The amount of the trading commission cannot be stated here in advance because it will be determined between our company and you based on current market conditions and the content of each transaction etc.

** The ratio of margin requirements etc. to the amount of the transaction cannot be stated here in advance because it will be determined between our company and you based on current market conditions and the content of each transaction etc.

When making an actual transaction, please be sure to carefully read the materials presented to you prior to the execution of agreement, and to take responsibility for your own decisions regarding the signing of the agreement with our company.

3Q26 results preview: several favourable trends ahead

- Rising high-end ABF substrate likely to drive blended ASP increase
- Multicore and optics likely to be the next growth drivers
- Reaffirming our Buy (1) call; raising 12M TP to TWD1,580

What's new: We believe an improving product mix, driven by rising Nvidia's CPU contribution, to be a key near-term share price catalyst.

What's the impact: **Near-term update.** After Kinsus released its August preliminary results on 23 September, we note that we had underestimated the 3Q26E gross margin expansion on product optimisation and price hike scale. The results imply a GM of 33% in August (vs. 26% in 2Q26). We therefore lift our 3Q-4Q26E gross margin to 33.2-35.1% (from 28.9-30.3%) to reflect an improving product mix, including greater CPU substrate contribution. We believe the gross margin of high-end chipset substrate may be c.50%, supporting margin expansion. We also expect a c.10% QoQ price hike for both BT and ABF substrate in 3Q26, above Kinsus' guidance of a high-single-digit% QoQ, making these substrates the other growth driver. We see further gross margin expansion in 2027-28 on the ongoing price hike trend and increasing high-end ABF substrate product mix.

Business outlook. We believe several favourable trends lie ahead. First, we see a rising contribution from high-end GPU and CPU ABF substrates. We believe Nvidia's CPU currently accounts for 5-10% of total revenue, with Kinsus holding a 70-80% market share. We also expect Kinsus to acquire a teens% market share in AMD's Venice, which should gradually ramp up from 4Q26. These will likely become key growth drivers of the ABF substrate segment in 2027, in our view. We believe the ramp-up progress for GPU substrate for these two clients is slightly slower than that for CPU. Second, we believe Kinsus will benefit from the rising BT substrate demand for optical transceivers. In our view, migration to on-board optics (OBO) and NPO/CPO will require ABF substrate beneath the optics engine (OE) in OBO; the OE and IC will need a bigger ABF substrate as we move to the NPO/CPO generation. As such, we expect the total ABF substrate demand to increase with rising adoption of optics in AI servers. Lastly, we expect the adoption of multiple-core ABF from 2028 to improve the rigidity and transmission performance before the official launch of ceramic and glass-core substrate, which we expect to increase the ABF TAM as well.

What we recommend: We raise our 2026-28E earnings by 19-29% to reflect the better-than-expected gross margin in August. We reaffirm our Buy (1) call and raise our 12M TP to TWD1,580, based on an unchanged target PER of 36x (high end of 3-year-trading range of 10-36x), applied to the 1-year-forward EPS forecast. Key downside risks: weaker-than-expected demand for memory, PCs, gaming GPUs or AI servers.

How we differ: Our 2026-28E EPS are 27-57% above the Bloomberg consensus, likely on our more bullish view on its gross margin expansion.

Company profile

Kinsus was founded in 2000 as a subsidiary of Asustek. The company mainly focus on niche ball grid array (BGA) substrates to avoid price competition among mainstream products like graphics card and chipsets, and it has become top-3 flip chip manufacturer in global. Besides, its manufacturing sites are based in Taiwan and mainland China.

ESG analysis

ESG risks

Risks		Management	Analyst comments
G	Executive/board quality	2	Kinsus's leadership team comprises experienced professionals dedicated to steering the company towards sustainable growth. This diverse board composition ensures a comprehensive range of expertise and perspectives, contributing to Kinsus's strategic decision-making and corporate governamce.
	Capital management	2	Kinsus maintains a robust financial framework, ensuring the availability of resources necessary for operational efficiency and strategic investments. The company's financial health is regularly disclosed through annual reports, providing transparency to stakeholders.
	Related party & transaction	1	The company adheres to stringent corporate governance policies to manage related party transactions, ensuring transparency and compliance with regulatory standards. The company discloses such transactions in its financial reports, maintaining accountability and stakeholder trust. For instance, the company's annual general meeting documents provide details on related party transactions, ensuring transparency and accountability.
S	Supply chain management	1	Kinsus is committed to sustainable supply chain practices, emphasizing environmental, social, and governance considerations. The company has established comprehensive ESG policies, including commitments to labor standards, environmental health and safety, ethics, and conflict-free minerals. These policies guide the company's interactions with suppliers and partners, promoting sustainability throughout the supply chain.
E	Data security	3	The company recognizes the importance of information security in its operations. As part of its corporate governance framework, Kinsus is likely to implement standard data protection practices to safeguard sensitive information and ensure compliance with relevant regulations. Stakeholders are encouraged to consult the company's official communications or contact the company directly for detailed information on data security policies.

Note: Management score represents a company's ability to manage/benefit from certain ESG topics. The scores range from 1 to 3, with 1 being the strongest.

Bahrain

This research material is distributed in Bahrain by Daiwa Capital Markets Europe Limited, Bahrain Branch, regulated by The Central Bank of Bahrain and holds Investment Business Firm – Category 2 license and having its official place of business at the Bahrain World Trade Centre, South Tower, 7th floor, P.O. Box 30069, Manama, Kingdom of Bahrain. Tel No. +973 17534452 Fax No. +973 535113

United States

This research is distributed into the United States directly by Daiwa Capital Markets Hong Kong Limited (DCMHK) and in certain cases indirectly by Daiwa Capital Markets America Inc. (DCMA), a U.S. Securities and Exchange Commission registered broker-dealer and FINRA member firm, exclusively to "major U.S. institutional investors", as defined under Rule 15a-6 promulgated under the U.S. Securities Exchange Act of 1934, as amended, and as interpreted by the staff of the U.S. Securities and Exchange Commission (SEC). Where this is co-branded research published by Daiwa's partners in collaboration with other parties not affiliated with Daiwa, this research is distributed in the United States by DCMHK only. This report is not an offer to sell or the solicitation of any offer to buy securities. U.S. customers wishing to effect transactions in any designated investment discussed in this report should do so through a qualified salesperson of DCMA. Non-U.S. customers wishing to effect transactions in any designated investment discussed in this report should contact a Daiwa entity in their local jurisdiction. The securities or other investment products discussed in this report may not be eligible for sale in some jurisdictions.

Analysts employed outside the U.S., as specifically indicated elsewhere in this report, are not registered as research analysts with FINRA. These analysts may not be associated persons of DCMA, and therefore may not be subject to FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Japan - Notification items pursuant to Article 37 of the Financial Instruments and Exchange Law

(This Notification is only applicable to where report is distributed by Daiwa Securities Co. Ltd.)

If you decide to enter into a business arrangement with our company based on the information described in this report, we ask you to pay close attention to the following items.

- In addition to the purchase price of a financial instrument, our company will collect a trading commission* for each transaction as agreed beforehand with you. Since commissions may be included in the purchase price or may not be charged for certain transactions, we recommend that you confirm the commission for each transaction. In some cases, our company also may charge a maximum of ¥2 million per year as a standing proxy fee for our deposit of your securities, if you are a non-resident.
- For derivative and margin transactions etc., our company may require collateral or margin requirements in accordance with an agreement made beforehand with you. Ordinarily in such cases, the amount of the transaction will be in excess of the required collateral or margin requirements**.
- There is a risk that you will incur losses on your transactions due to changes in the market price of financial instruments based on fluctuations in interest rates, exchange rates, stock prices, real estate prices, commodity prices, and others. In addition, depending on the content of the transaction, the loss could exceed the amount of the collateral or margin requirements.
- There may be a difference between bid price etc. and ask price etc. of OTC derivatives handled by our company.
- Before engaging in any trading, please thoroughly confirm accounting and tax treatments regarding your trading in financial instruments with such experts as certified public accountants.

* The amount of the trading commission cannot be stated here in advance because it will be determined between our company and you based on current market conditions and the content of each transaction etc.

** The ratio of margin requirements etc. to the amount of the transaction cannot be stated here in advance because it will be determined between our company and you based on current market conditions and the content of each transaction etc.

When making an actual transaction, please be sure to carefully read the materials presented to you prior to the execution of agreement, and to take responsibility for your own decisions regarding the signing of the agreement with our company.

Stacy Lin
(886) 2 8758 6252
stacy.lin@daiwacm-cathay.com.tw

Summary: Winway reported September revenue of TWD1.25bn (-26.7% MoM; +87.7% YoY), brining 3Q26 revenue to a record high of TWD4.56bn (+29.3% QoQ; +152.6% YoY). The 3Q26 top-line result beat market consensus by 6.7% but missed Daiwa's estimate by 9.1%. Following August's exceptionally strong top line (TWD1.71bn), we had factored in a higher shipment run-rate for September. However, the miss stems primarily from the lumpiness of probe-card deliveries (high concentration to a single customer) and customer qualification timelines, rather than order cancellations or share loss.

We forecast 4Q26 revenue to track flattish to slightly down QoQ, reflecting lower probe-card shipment volumes compared to 3Q26, alongside typical year-end pull-in deceleration from customers. On profitability, we maintain our view that 2Q26 marked the trough for gross margin this year. As the revenue contribution from lower-margin MEMS probe cards declines, a more favourable product mix should drive a steady QoQ gross margin recovery, which may drive gross margin to reach 40% earlier than market expectations.

Although we remain positive on Winway's structural growth profile, near-term catalysts appear muted. This reflects the revenue lumpiness in probe cards, while additional socket capacity will not come online until March 2027—pushing the corresponding revenue recognition into 2Q27. We will revisit our financial model upon the company's 3Q26 results release. We currently have a Buy (1) rating on Winway with a 12-month TP of TWD10,000.

Winway monthly revenue trend

Bahrain

This research material is distributed in Bahrain by Daiwa Capital Markets Europe Limited, Bahrain Branch, regulated by The Central Bank of Bahrain and holds Investment Business Firm – Category 2 license and having its official place of business at the Bahrain World Trade Centre, South Tower, 7th floor, P.O. Box 30069, Manama, Kingdom of Bahrain. Tel No. +973 17534452 Fax No. +973 535113

United States

This research is distributed into the United States directly by Daiwa Capital Markets Hong Kong Limited (DCMHK) and in certain cases indirectly by Daiwa Capital Markets America Inc. (DCMA), a U.S. Securities and Exchange Commission registered broker-dealer and FINRA member firm, exclusively to "major U.S. institutional investors", as defined under Rule 15a-6 promulgated under the U.S. Securities Exchange Act of 1934, as amended, and as interpreted by the staff of the U.S. Securities and Exchange Commission (SEC). Where this is co-branded research published by Daiwa's partners in collaboration with other parties not affiliated with Daiwa, this research is distributed in the United States by DCMHK only. This report is not an offer to sell or the solicitation of any offer to buy securities. U.S. customers wishing to effect transactions in any designated investment discussed in this report should do so through a qualified salesperson of DCMA. Non-U.S. customers wishing to effect transactions in any designated investment discussed in this report should contact a Daiwa entity in their local jurisdiction. The securities or other investment products discussed in this report may not be eligible for sale in some jurisdictions.

Analysts employed outside the U.S., as specifically indicated elsewhere in this report, are not registered as research analysts with FINRA. These analysts may not be associated persons of DCMA, and therefore may not be subject to FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Japan - Notification items pursuant to Article 37 of the Financial Instruments and Exchange Law

(This Notification is only applicable to where report is distributed by Daiwa Securities Co. Ltd.)

If you decide to enter into a business arrangement with our company based on the information described in this report, we ask you to pay close attention to the following items.

- In addition to the purchase price of a financial instrument, our company will collect a trading commission* for each transaction as agreed beforehand with you. Since commissions may be included in the purchase price or may not be charged for certain transactions, we recommend that you confirm the commission for each transaction. In some cases, our company also may charge a maximum of ¥2 million per year as a standing proxy fee for our deposit of your securities, if you are a non-resident.

- For derivative and margin transactions etc., our company may require collateral or margin requirements in accordance with an agreement made beforehand with you. Ordinarily in such cases, the amount of the transaction will be in excess of the required collateral or margin requirements**.
- There is a risk that you will incur losses on your transactions due to changes in the market price of financial instruments based on fluctuations in interest rates, exchange rates, stock prices, real estate prices, commodity prices, and others. In addition, depending on the content of the transaction, the loss could exceed the amount of the collateral or margin requirements.
- There may be a difference between bid price etc. and ask price etc. of OTC derivatives handled by our company.
- Before engaging in any trading, please thoroughly confirm accounting and tax treatments regarding your trading in financial instruments with such experts as certified public accountants.

* The amount of the trading commission cannot be stated here in advance because it will be determined between our company and you based on current market conditions and the content of each transaction etc.

** The ratio of margin requirements etc. to the amount of the transaction cannot be stated here in advance because it will be determined between our company and you based on current market conditions and the content of each transaction etc.

When making an actual transaction, please be sure to carefully read the materials presented to you prior to the execution of agreement, and to take responsibility for your own decisions regarding the signing of the agreement with our company.

King Slide

Maintain Buy: Sep sales -31% MoM from high bases; Aug earnings remain solid

Maintain Rating: BUY | PO: 14,888 TWD | Price: 13,100 TWD

Sep sales -31% MoM from high bases; 3Q26 sales in-line

King Slide's Sep sales of NT$4.46bn declined 31% MoM (+196% YoY), after the strong sales in the past few months (up 17-46% MoM in Apr-Jul and up 1% MoM in Aug). 3Q26 sales of NT$17.34bn (+60% QoQ, +297% YoY) were 0.5% above BofAe of NT$17.26bn and 0.9% below consensus of NT$17.49bn.

We are not surprised with the MoM sales drop in Sep as (1) the company's MoM sales trend has been volatile (Exhibit 1 and Exhibit 2), (2) sales bases in Apr-Aug were at record levels, (3) contribution from Nvidia Rubin GPU projects should be more meaningful in 4Q26 after hardware components ramp-up, and (4) partial general server orders/demand likely were pushed out due to key component shortage (e.g. memory, CPU).

Solid Aug EPS NT$40.07; pre-tax/net margin 74.6%/59.1%

In addition to Sep sales, on the same day (6 Oct), King Slide also announced its Aug unaudited key financial data as required by local regulations (Exhibit 3). Aug sales were NT$6,466mn (+344% YoY), while pre-tax profit was NT$4,826mn (+216% YoY) and net income was NT$3,819mn (+212% YoY). EPS came in at NT$40.07 (+212% YoY). Pre-tax margin and net margin were 74.6% and 59.1%, respectively.

Compared to July unaudited figures announced on 14 Aug (see our 17 Aug report), including sales of NT$6,407mn, pre-tax margin of 93.4%, net margin of 74.7%, and EPS of NT$50.24, we believe the margin and EPS differences mainly reflected FX impact under similar sales scale.

Combining Jul and Aug unaudited results, sales totaled NT$12.87bn and EPS reached NT$90.31. Pre-tax margin and net margin were 84.0% and 66.9%, respectively. Jul + Aug sales achieved 75%/74% of BofAe/consensus 3Q26 sales. Pre-tax profit, net income, and EPS all achieved 79% of BofAe (79.4% pre-tax margin, 62.9% net margin, and NT$113.87 EPS) and 77-78% of consensus (80.3% pre-tax margin, 63.1% net margin, and NT$117.62 EPS). We also noted that Jul + Aug EPS of NT$90.31 already surpassed EPS of NT$74.38 in 2Q26 with similar pre-tax/net margin (84.0%/66.9% in Jul + Aug, vs. 84.2%/65.4% in 2Q26).

Maintain Buy; expect a neutral-to-positive market reaction

We expect a neutral-to-positive market reaction in the near term in view of significant MoM sales decline in Sep but also still solid Aug unaudited data. We maintain Buy on King Slide as the server rail market leader with broad and diversified client/project base. We expect the company to post 3Q26 results after market close on 12 Nov (Thu).

Price objective basis & risk

King Slide (KGSLF)

Our PO of NT$14,888 is based on 32x 2027E EPS. We use 32x P/E multiple (2.5SD above P/E average since listing) in view of strong AI server market demand, leading position in server rail, solid/high margin profiles, and double-digit sales/EPS CAGR in 2026-28E. Its early step into server market since 2001 with proven track record, much larger scale than peer, and 3,600+ patents as strong moats for high/above-peer margins. Its above-30x P/E is a similar case to other component sub-sector leaders in Taiwan.

Upside risks to our PO are: (1) even stronger AI server demand, (2) margin upside thanks to larger scale and/or better efficiency, (3) better kitchen slides market demand, (4) faster capacity expansion, (5) favorable FX movement (mainly USD/NTD) for GM and/or non-operating items.

Downside risks to our PO are: (1) softer AI server demand due to GPU/components shortage, (2) GM pressure due to higher raw material cost (e.g. steel, aluminum), (3) softer kitchen slides market demand under macro uncertainty/weakness, (4) delayed product certification, (5) slower capacity expansion, (6) unfavorable FX movement (mainly USD/NTD) to weigh on GM and/or non-operating items.

Analyst Certification

I, Doris Kao, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject securities and issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or view expressed in this research report.

Special Disclosures

Information on securities which are listed on the exchanges where ML Securities (Taiwan) Limited is not permitted to trade or solicit trades for clients is for informational purposes only and is not a recommendation or a solicitation to trade such securities. ML Securities (Taiwan) Limited will not execute transactions for nor accept orders from clients to trade such securities. Foreign investment in Taiwan securities is regulated and restricted. Currently, foreign investment in Taiwan securities is permitted by investment through: (1) global depository receipts, (2) convertible bonds, (3) mutual funds issued offshore of Taiwan, and (4) a special foreign institutional investors (FINIs) and foreign individual investors (FIDIs) program supervised by the Taiwan SFB whereunder FINIs/FIDIs may apply for investment ID to invest in Taiwan securities by registration with Taiwan Stock Exchange. FINIs will additionally need consent from the foreign exchange authority, ie, the Central Bank of China. In addition to the limitations above, various industry-specific percentage-based limitations on foreign ownership of Taiwan companies (and in some cases prohibitions) may apply. Investments are subject to exchange rate and currency conversion restrictions and risks. Dividends and interest earned by foreign investors' Taiwan securities/instruments are generally subject to a 20% withholding tax. Ordinary shares are not available to ML private client accounts in the U.S.

This report is distributed in Taiwan by Merrill Lynch Securities (Taiwan) Limited, which is regulated by the Taiwan SFB.

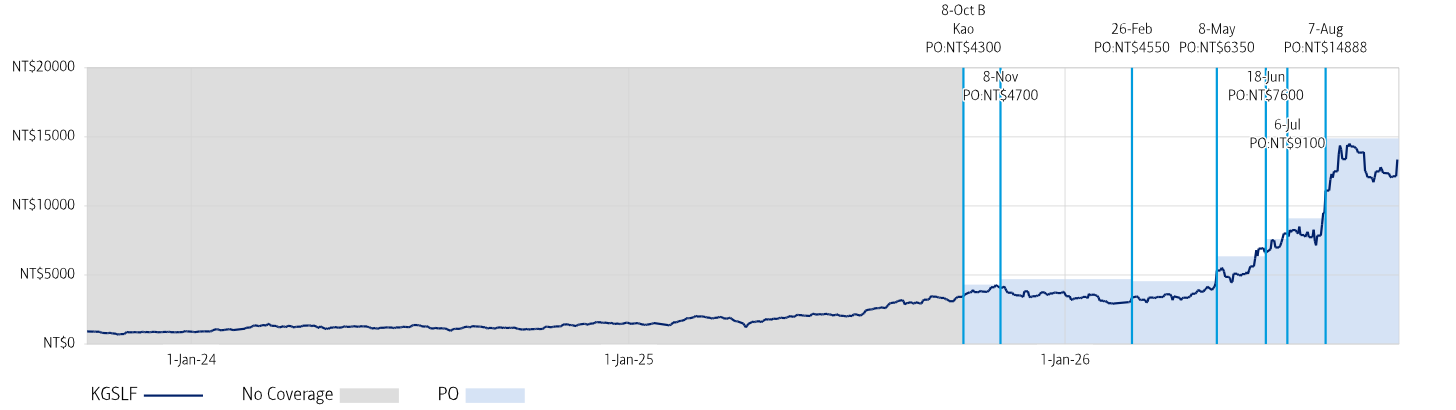
King Slide (KGSLF) Price Chart



B: Buy, N: Neutral, U: Underperform, PO: Price Objective, NA: No longer valid, NR: No Rating

The Investment Opinion System is contained at the end of the report under the heading "Fundamental Equity Opinion Key". Dark grey shading indicates the security is restricted with the opinion suspended. Medium grey shading indicates the security is under review with the opinion withdrawn. Light grey shading indicates the security is not covered. Chart is current as of a date no more than one trading day prior to the date of the report.

Equity Investment Rating Distribution: Technology Group (as of 30 Sep 2026)

Coverage Universe	Count	Percent	Inv. Banking Relationships [R1]	Count	Percent
Buy	255	62.04%	Buy	157	61.57%
Hold	82	19.95%	Hold	46	56.10%
Sell	74	18.00%	Sell	31	41.89%

Equity Investment Rating Distribution: Global Group (as of 30 Sep 2026)

Coverage Universe	Count	Percent	Inv. Banking Relationships [R1]	Count	Percent
Buy	2057	57.03%	Buy	1386	67.38%
Hold	806	22.35%	Hold	563	69.85%
Sell	744	20.63%	Sell	446	59.95%

[R1] Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. VOLATILITY RISK RATINGS, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. INVESTMENT RATINGS reflect the analyst's assessment of both a stock's absolute total return potential as well as its attractiveness for investment relative to other stocks within its Coverage Cluster (defined below). Our investment ratings are: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. An investment rating of 6 (No Rating) indicates that a stock is no longer trading on the basis of fundamentals. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster[R2]
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

[R2]Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Price Charts for the securities referenced in this research report are available on the Price Charts website, or call 1-800-MERRILL to have them mailed.
In the US, retail sales and/or distribution of this report may be made only in states where these securities are exempt from registration or have been qualified for sale: King Slide.
The country in which this issuer is organized has certain laws or regulations that limit or restrict ownership of the issuer's shares by nationals of other countries: King Slide.
BofA Global Research personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Global Research policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.

Prices are indicative and for information purposes only. Except as otherwise stated in the report, for any recommendation in relation to an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report and in relation to a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including BofA Securities trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. Digital assets are extremely speculative, volatile and are not regulated in a manner similar to U.S. securities markets. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.
This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.
Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.
BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities or digital assets that may have been recommended or discussed in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments recommended or discussed in this report.
BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.
In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS). If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

Accton Technology Corporation | Asia Pacific

September Sales -1% MoM/ +66% YoY

In this report, we focus on Accton's monthly sales, which we believe could be a catalyst for share price movement.

Details:

- September sales were NT$40,399mn (-1% MoM/+66% YoY).
- 3Q26 revenue was NT$120,744mn (+26% QoQ/+66% YoY), in line with MSe of NT$120,883mn (+27% QoQ/+66% YoY) and consensus of NT$117.390mn (+23% QoQ/+61% YoY) by 3%.

Our view:

- We believe the consignment arrangement of DRAM, PCB, etc., from August might have capped the upside on revenue growth, but it should be a favorable factor for gross margin, emerging from August/September and likely extending into 4Q26.
- Driven by the network switch business and its major customer's AI accelerator module ramp, we expect revenue to continue growing sequentially in 4Q26, with the momentum in 2027 strengthened by potential new customers and new products.

- Stay OW with a PT of NT$3,500, based on 30x 2027e P/E.

Exhibit 1: Accton's monthly sales vs. its share price since 2015

Valuation Methodology and Risks

Accton Technology Corporation (2345.TW)

Base case, P/E, which we believe better captures the company's earnings growth momentum. We assign a target P/E of 30x to our 2027 EPS estimate, which we view as justified by an operating profit CAGR of 48% for 2025-28, based on our estimates. This implies a PEG of around 0.6, vs. its average of 0.7 over 2019-25, when the stock was trading at a P/E of 22x for an operating profit CAGR of 32%.

Risks to Upside

- Stronger data center capex
- Faster network switch spec migration
- InfiniBand losing share in AI networks
- Stronger custom AI accelerator growth
- Stronger ODM direct business model adoption

Risks to Downside

- Weaker data center capex
- Slower network switch spec migration
- InfiniBand taking more share in AI networks
- Softer custom AI accelerator growth
- Softer ODM direct business model adoption

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: AAC Technologies Holdings, **Accton Technology Corporation**, Acer Inc., Asustek Computer Inc., AU Optronics, BYD Electronics, Compal Electronics, E Ink Holdings Inc., Eoptolink Technology Inc Ltd, Giga-Byte Technology Co. Ltd., GoerTek Inc, Hon Hai Precision, Innolux, Lenovo, Lingyi Itech Guangdong Co, Quanta Computer Inc., Xiaomi Corp, Yageo Corp., Zhen Ding.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality

of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.
Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.
Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of September 30, 2026)
The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.
For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

	Coverage Universe		Investment Banking Clients (IBC)			Other Material Investment Services Clients (MISC)	
Stock Rating Category	Count	% of Total	Count	% of Total IBC	% of Rating Category	Count	% of Total Other MISC
Overweight/Buy	1599	43%	455	48%	28%	783	44%
Equal-weight/Hold	1563	42%	394	42%	25%	763	43%
Not-Rated/Hold	2	0%	1	0%	50%	1	0%
Underweight/Sell	570	15%	96	10%	17%	227	13%
Total	3,734		946			1774	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

Important Disclosures for Morgan Stanley Smith Barney LLC Customers

Important disclosures regarding any material conflict of interest that can reasonably be expected to have influenced Morgan Stanley Smith Barney LLC's choice of a third-party research provider or the subject company of a third-party research report, are available on the Morgan Stanley Wealth Management disclosure website at www.morganstanley.com/online/researchdisclosures. For Morgan Stanley specific disclosures, you may refer to https://www.morganstanley.com/eqr/disclosures/webapp/generalresearch.

Each Morgan Stanley research report is reviewed and approved on behalf of Morgan Stanley Smith Barney LLC. This review and approval is conducted by the same person who reviews the research report on behalf of Morgan Stanley. This could create a conflict of interest.

Other Important Disclosures

Morgan Stanley Research policy is to update research reports as and when the Research Analyst and Research Management deem appropriate, based on developments with the issuer, the sector, or the market that may have a material impact on the research views or opinions stated therein. In addition, certain Research publications are intended to be updated on a regular periodic basis (weekly/monthly/quarterly/annual) and will ordinarily be updated with that frequency, unless the Research Analyst and Research Management determine that a different publication schedule is appropriate based on current conditions.

Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley produces an equity research product called a "Tactical Idea." Views contained in a "Tactical Idea" on a particular stock may be contrary to the recommendations or views expressed in research on the same stock. This may be the result of differing time horizons, methodologies, market events, or other factors. For all research available on a particular stock, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Morgan Stanley Research is provided to our clients through our proprietary research portal on Matrix and also distributed electronically by Morgan Stanley to clients. Certain, but not all, Morgan Stanley Research products are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience. For access to all available Morgan Stanley Research, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Any access and/or use of Morgan Stanley Research is subject to Morgan Stanley's Terms of Use (http://www.morganstanley.com/terms.html). By accessing and/or using Morgan Stanley Research, you are indicating that you have read and agree to be bound by our Terms of Use (http://www.morganstanley.com/terms.html). In addition you consent to Morgan Stanley processing your personal data and using cookies in accordance with our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html), including for the purposes of setting your preferences and to collect readership data so that we can deliver better and more personalized service and products to you. To find out more information about how Morgan Stanley processes personal data, how we use cookies and how to reject cookies see our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html). Please use the provided link to review the Terms and Conditions and Most Important Terms and Conditions for Morgan Stanley India Company Private Limited (https://www.morganstanley.com/assets/pdfs/about-us-global-offices/india/Terms_and_conditions.pdf) and the following link to review the audit report (https://ny.matrix.ms.com/eqr/research/webapp/researchdocs/MSICPL_Morgan_Stanley_Research_Audit_Report.pdf).

If you do not agree to our Terms of Use and/or if you do not wish to provide your consent to Morgan Stanley processing your personal data or using cookies please do not access our research.

Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.

Certain information in Morgan Stanley Research was sourced by employees of the Shanghai Representative Office of Morgan Stanley Asia Limited for the use of Morgan Stanley Asia Limited. Morgan Stanley is not incorporated under PRC law and the research in relation to this report is conducted outside the PRC. Morgan Stanley Research does not constitute an offer to sell or the solicitation of an offer to buy any securities in the PRC. PRC investors shall have the relevant qualifications to invest in such securities and shall be responsible for obtaining all relevant approvals, licenses, verifications and/or registrations from the relevant governmental authorities themselves. Neither this report nor any part of it is intended as, or shall constitute, provision of any consultancy or advisory service of securities investment as defined under PRC law. Morgan Stanley | RESEARCH

UPDATE

October 6, 2026 12:55 AM GMT

Bizlink | Asia Pacific

September Sales +5% MoM/ +39% YoY

In this report, we focus on Bizlink's monthly sales, which we believe could be a catalyst for its share price.

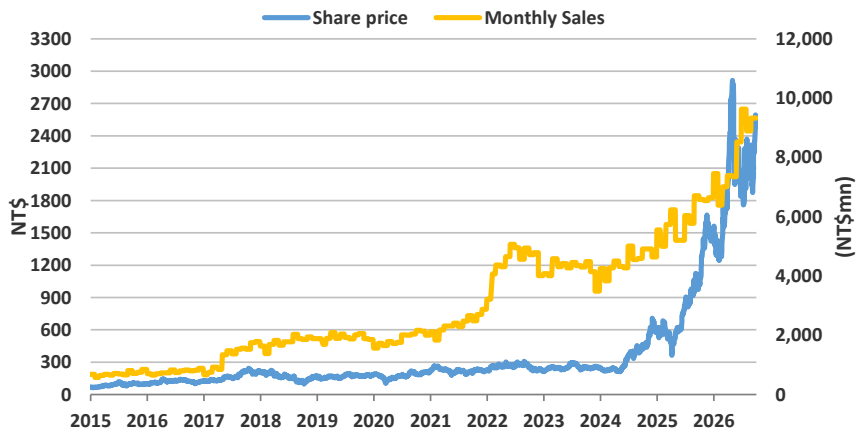
Details:

- September sales came in at NT$9,332mn (+5% MoM/+39% YoY)
- 3Q26 revenue reached NT$27,854mn (+20% QoQ/+50% YoY), slightly short of MSe of NT$28,521mn (+23% QoQ/+55% YoY) by 2% while exceeding consensus of NT$27,423mn (+18% QoQ/+49% YoY) by 2%.

Our view:

- We think 3Q26 revenue came in largely in-line with market expectations.
- Looking into 2H26, we expect HPC to remain the main growth driver, as power interconnects should continue to see momentum from AI/general servers. Meanwhile, data interconnects should grow along with new ASIC model ramp-up and GPU server demand. Moreover, semi cap equipment revenue growth should also sustain.
- We believe Bizlink has allocated increasing resources toward the optical interconnect space, including the collaboration on ALC with Credo, mini VCSEL optical module with ams-OSRAM and shuffle box with Corning. We think that these opportunities could help offset a potential slowdown in its AEC business as AEC solutions reach their scalability limits at higher data rates, likely from 3.2T.
- Stay OW.

Exhibit 1: Bizlink's monthly sales vs. its share price since 2015



Note: Past performance is no guarantee of future results. Results shown do not include transaction costs. Source: Company data, TEJ, Morgan Stanley Research.

Valuation Methodology and Risks

Bizlink (3665.TW)

Base case, derived from 30x 2027e P/E. We think our target P/E multiple is justified by an earnings CAGR of 46% seen over 2025-28e, which implies a PEG of around 0.7. This is in line with the average of 0.7 in 2019-24, when the stock was trading at an average 13x P/E for a 19% earnings CAGR.

Risks to Upside

- Faster and wider AEC adoption
- Data center and semi equipment capex increases that drive stronger HPC and semi-cap business
- Stronger recovery for automotive business

Risks to Downside

- Lower-than-expected AEC adoption
- Intensifying competition
- Softer-than-expected AI capex
- Slower-than-expected growth in the semi capital equipment market
- Continued weakness in the auto industry

Important Regulatory Disclosures on Subject Companies

As of August 31, 2026, Morgan Stanley beneficially owned 1% or more of a class of common equity securities of the following companies covered in Morgan Stanley Research: AAC Technologies Holdings, Accelink Technologies Co. Ltd., Acer Inc., AirTAC International, Auras Technology Co Ltd, **Bizlink**, Catcher Technology, Chenbro, Co-Tech Development Corp., Compal Electronics, Delta Electronics Inc., E Ink Holdings Inc., Elite Material Co., Eoptolink Technology Inc Ltd, Genius Electronic Optical Co. Ltd., Giga-Byte Technology Co. Ltd., Gold Circuit Electronics Ltd., Hiwin Technologies Corp., LandMark Optoelectronics Corporation, Largan Precision, Lens Technology, LianChuang Electronic Technology Co Ltd, Lingyi Itech Guangdong Co, Lite-On Technology, Lotes Co. Ltd., Nan Ya PCB, OFILM Group Co Ltd, Quanta Computer Inc., Sunny Optical, Suzhou TFC Optical Communication Co Ltd., Taiwan Union Technology Corporation, Unimicron, Visual Photonics Epitaxy Co Ltd, Wistron Corporation, Wiwynn Corp, Xiaomi Corp, Yageo Corp., Yangtze Optical Fibre and Cable JSC Ltd, Zhejiang Crystal-Optech Co Ltd, Zhen Ding, Zhongji Innolight Co Ltd.

Within the last 12 months, Morgan Stanley managed or co-managed a public offering (or 144A offering) of securities of Asustek Computer Inc., Unimicron, Wistron Corporation, Wiwynn Corp, Zhen Ding, Zhongji Innolight Co Ltd.

Within the last 12 months, Morgan Stanley has received compensation for investment banking services from Asustek Computer Inc., Lenovo, Unimicron, Wistron Corporation, Wiwynn Corp, Xiaomi Corp, Yageo Corp., Zhen Ding, Zhongji Innolight Co Ltd.

In the next 3 months, Morgan Stanley expects to receive or intends to seek compensation for investment banking services from AAC Technologies Holdings, Accton Technology Corporation, Acer Inc., Advantech, AirTAC International, Asustek Computer Inc., AU Optronics, **Bizlink**, Catcher Technology, Chenbro, Compal Electronics, Delta Electronics Inc., E Ink Holdings Inc., Elite Material Co., Ennostar Inc, Eoptolink Technology Inc Ltd, Giga-Byte Technology Co. Ltd., Gold Circuit Electronics Ltd., Hon Hai Precision, Innolux, Lenovo, Lens Technology, Lingyi Itech Guangdong Co, Lite-On Technology, Lotes Co. Ltd., Luxshare Precision Industry Co., Ltd., Pegatron Corporation, Q Technology (Group) Company Ltd, Quanta Computer Inc., Shanghai Conant Optical Co Ltd, Shenzhen Transsion Holdings Co Ltd, Suzhou TFC Optical Communication Co Ltd., TCL Corp., Unimicron, Wistron Corporation, Wiwynn Corp, Xiaomi Corp, Yageo Corp., Yangtze Optical Fibre and Cable JSC Ltd, Zhen Ding, Zhongji Innolight Co Ltd.

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from AAC Technologies Holdings, Accton Technology Corporation, Acer Inc., Asustek Computer Inc., AU Optronics, BYD Electronics, Compal Electronics, E Ink Holdings Inc., Eoptolink Technology Inc Ltd, Giga-Byte Technology Co. Ltd., GoerTek Inc, Hon Hai Precision, Innolux, Lenovo, Lingyi Itech Guangdong Co, Quanta Computer Inc., Xiaomi Corp, Yageo Corp..

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: AAC Technologies Holdings, Accton Technology Corporation, Acer Inc., Advantech, AirTAC International, Asustek Computer Inc., AU Optronics, **Bizlink**, Catcher Technology, Chenbro, Compal Electronics, Delta Electronics Inc., E Ink Holdings Inc., Elite Material Co., Ennostar Inc, Eoptolink Technology Inc Ltd, Giga-Byte Technology Co. Ltd., Gold Circuit Electronics Ltd., Hon Hai Precision, Innolux, Lenovo, Lens Technology, Lingyi Itech Guangdong Co, Lite-On Technology, Lotes Co. Ltd., Luxshare Precision Industry Co., Ltd., Pegatron Corporation, Q Technology (Group) Company Ltd, Quanta Computer Inc., Shanghai Conant Optical Co Ltd, Shenzhen Transsion Holdings Co Ltd, Suzhou TFC Optical Communication Co Ltd., TCL Corp., Unimicron, Wistron Corporation, Wiwynn Corp, Xiaomi Corp, Yageo Corp., Yangtze Optical Fibre and Cable JSC Ltd, Zhen Ding, Zhongji Innolight Co Ltd.

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: AAC Technologies Holdings, Accton Technology Corporation, Acer Inc., Asustek Computer Inc., AU Optronics, BYD Electronics, Compal Electronics, E Ink Holdings Inc., Eoptolink Technology Inc Ltd, Giga-Byte Technology Co. Ltd., GoerTek Inc, Hon Hai Precision, Innolux, Lenovo, Lingyi Itech Guangdong Co, Quanta Computer Inc., Xiaomi Corp, Yageo Corp., Zhen Ding.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality

of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.
Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.
Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of September 30, 2026)
The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.
For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

	Coverage Universe		Investment Banking Clients (IBC)			Other Material Investment Services Clients (MISC)	
Stock Rating Category	Count	% of Total	Count	% of Total IBC	% of Rating Category	Count	% of Total Other MISC
Overweight/Buy	1599	43%	455	48%	28%	783	44%
Equal-weight/Hold	1563	42%	394	42%	25%	763	43%
Not-Rated/Hold	2	0%	1	0%	50%	1	0%
Underweight/Sell	570	15%	96	10%	17%	227	13%
Total	3,734		946			1774	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

Important Disclosures for Morgan Stanley Smith Barney LLC Customers

Important disclosures regarding any material conflict of interest that can reasonably be expected to have influenced Morgan Stanley Smith Barney LLC's choice of a third-party research provider or the subject company of a third-party research report, are available on the Morgan Stanley Wealth Management disclosure website at www.morganstanley.com/online/researchdisclosures. For Morgan Stanley specific disclosures, you may refer to https://www.morganstanley.com/eqr/disclosures/webapp/generalresearch.

Each Morgan Stanley research report is reviewed and approved on behalf of Morgan Stanley Smith Barney LLC. This review and approval is conducted by the same person who reviews the research report on behalf of Morgan Stanley. This could create a conflict of interest.

Other Important Disclosures

Morgan Stanley Research policy is to update research reports as and when the Research Analyst and Research Management deem appropriate, based on developments with the issuer, the sector, or the market that may have a material impact on the research views or opinions stated therein. In addition, certain Research publications are intended to be updated on a regular periodic basis (weekly/monthly/quarterly/annual) and will ordinarily be updated with that frequency, unless the Research Analyst and Research Management determine that a different publication schedule is appropriate based on current conditions.

Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley produces an equity research product called a "Tactical Idea." Views contained in a "Tactical Idea" on a particular stock may be contrary to the recommendations or views expressed in research on the same stock. This may be the result of differing time horizons, methodologies, market events, or other factors. For all research available on a particular stock, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Morgan Stanley Research is provided to our clients through our proprietary research portal on Matrix and also distributed electronically by Morgan Stanley to clients. Certain, but not all, Morgan Stanley Research products are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience. For access to all available Morgan Stanley Research, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Any access and/or use of Morgan Stanley Research is subject to Morgan Stanley's Terms of Use (http://www.morganstanley.com/terms.html). By accessing and/or using Morgan Stanley Research, you are indicating that you have read and agree to be bound by our Terms of Use (http://www.morganstanley.com/terms.html). In addition you consent to Morgan Stanley processing your personal data and using cookies in accordance with our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html), including for the purposes of setting your preferences and to collect readership data so that we can deliver better and more personalized service and products to you. To find out more information about how Morgan Stanley processes personal data, how we use cookies and how to reject cookies see our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html). Please use the provided link to review the Terms and Conditions and Most Important Terms and Conditions for Morgan Stanley India Company Private Limited (https://www.morganstanley.com/assets/pdfs/about-us-global-offices/india/Terms_and_conditions.pdf) and the following link to review the audit report (https://ny.matrix.ms.com/eqr/research/webapp/researchdocs/MSICPL_Morgan_Stanley_Research_Audit_Report.pdf).

If you do not agree to our Terms of Use and/or if you do not wish to provide your consent to Morgan Stanley processing your personal data or using cookies please do not access our research. Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser.

The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.

Certain information in Morgan Stanley Research was sourced by employees of the Shanghai Representative Office of Morgan Stanley Asia Limited for the use of Morgan Stanley Asia Limited. Morgan Stanley is not incorporated under PRC law and the research in relation to this report is conducted outside the PRC. Morgan Stanley Research does not constitute an offer to sell or the solicitation of an offer to buy any securities in the PRC. PRC investors shall have the relevant qualifications to invest in such securities and shall be responsible for obtaining all relevant approvals, licenses, verifications and/or registrations from the relevant governmental authorities themselves. Neither this report nor any part of it is intended as, or shall constitute, provision of any consultancy or advisory service of securities investment as defined under PRC law. Chroma Ate Inc. | Asia Pacific

September Sales +22% MoM/ +206% YoY

In this report, we focus on Chroma's monthly sales, which we believe could be a catalyst for share price movement.

Details:

- September revenue was NT$6,860mn (22% MoM/+206% YoY), a record high.
- 3Q26 revenue came in at NT$17,926mn (+32% QoQ/+180% YoY), significantly higher than our estimate at NT$14,772mn (+9% QoQ/+130% YoY) and consensus at NT$14,555mn (+8% QoQ/+127% YoY).

Our view:

- We believe that the strength in 3Q26 was mainly driven by the semiconductor and photonics business, especially SLT, metrology, transceiver/CPO testing, etc.
- We think that Chroma might start to ship FT handlers and ovens in small volume from late 2026/early 2027, which represent new business opportunities for the coming years.
- Stay OW.

Exhibit 1: Chroma's monthly sales vs. its share price since 2015

Valuation Methodology and Risks

Chroma Ate Inc. (2360.TW)

Base case, 45x 2027e P/E. We use P/E as our valuation methodology because we think it better captures Chroma's earnings growth momentum. The stock traded at an average valuation of ~19x P/E during 2014-25 with an operating profit CAGR of 20%, implying a PEG of 1.0. We think our target multiple of 45x is justified by the 61% operating profit CAGR we project for 2025-28.

Risks to Upside

- Better-than-expected macro conditions
- Stronger semi and photonics and power testing demand
- Margin improvement via better product mix
- Better opex control

Risks to Downside

- Macro slowdown
- Softer-than-expected AI capex
- Slower progress in the advanced packaging capacity expansion
- Weaker consumer electronics and automobile related demand
- Margin contraction arising from lack of revenue scale and increasing opex

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: AAC Technologies Holdings, Accton Technology Corporation, Acer Inc., Asustek Computer Inc., AU Optronics, BYD Electronics, Compal Electronics, E Ink Holdings Inc., Eoptolink Technology Inc Ltd, Giga-Byte Technology Co. Ltd., GoerTek Inc, Hon Hai Precision, Innolux, Lenovo, Lingyi Itech Guangdong Co, Quanta Computer Inc., Xiaomi Corp, Yageo Corp., Zhen Ding.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality

of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.
Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.
Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of September 30, 2026)
The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.
For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

	Coverage Universe		Investment Banking Clients (IBC)			Other Material Investment Services Clients (MISC)	
Stock Rating Category	Count	% of Total	Count	% of Total IBC	% of Rating Category	Count	% of Total Other MISC
Overweight/Buy	1599	43%	455	48%	28%	783	44%
Equal-weight/Hold	1563	42%	394	42%	25%	763	43%
Not-Rated/Hold	2	0%	1	0%	50%	1	0%
Underweight/Sell	570	15%	96	10%	17%	227	13%
Total	3,734		946			1774	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

Important Disclosures for Morgan Stanley Smith Barney LLC Customers

Important disclosures regarding any material conflict of interest that can reasonably be expected to have influenced Morgan Stanley Smith Barney LLC's choice of a third-party research provider or the subject company of a third-party research report, are available on the Morgan Stanley Wealth Management disclosure website at www.morganstanley.com/online/researchdisclosures. For Morgan Stanley specific disclosures, you may refer to https://www.morganstanley.com/eqr/disclosures/webapp/generalresearch.

Each Morgan Stanley research report is reviewed and approved on behalf of Morgan Stanley Smith Barney LLC. This review and approval is conducted by the same person who reviews the research report on behalf of Morgan Stanley. This could create a conflict of interest.

Other Important Disclosures

Morgan Stanley Research policy is to update research reports as and when the Research Analyst and Research Management deem appropriate, based on developments with the issuer, the sector, or the market that may have a material impact on the research views or opinions stated therein. In addition, certain Research publications are intended to be updated on a regular periodic basis (weekly/monthly/quarterly/annual) and will ordinarily be updated with that frequency, unless the Research Analyst and Research Management determine that a different publication schedule is appropriate based on current conditions.

Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley produces an equity research product called a "Tactical Idea." Views contained in a "Tactical Idea" on a particular stock may be contrary to the recommendations or views expressed in research on the same stock. This may be the result of differing time horizons, methodologies, market events, or other factors. For all research available on a particular stock, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Morgan Stanley Research is provided to our clients through our proprietary research portal on Matrix and also distributed electronically by Morgan Stanley to clients. Certain, but not all, Morgan Stanley Research products are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience. For access to all available Morgan Stanley Research, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

If you do not agree to our Terms of Use and/or if you do not wish to provide your consent to Morgan Stanley processing your personal data or using cookies please do not access our research. Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those

who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Morgan Stanley | RESEARCH

UPDATE

October 6, 2026 11:47 AM GMT

Hiwin Technologies Corp. | Asia Pacific

September Sales Flat MoM/ +30% YoY

In this report, we focus on Hiwin's monthly sales, which we believe could be a catalyst for its share price.

Details:

- September sales were NT$2,720mn (flat MoM/+30% YoY).
- 3Q26 revenue came in at NT$8,110mn (+8% QoQ/+35% YoY), largely in line with our estimate at NT$7,996mn (+6% QoQ/+33% YoY) and the consensus of NT$7,964mn (+6% QoQ/+33% YoY).

Our view:

- On top of the sequential growth on the top line, we believe that Hiwin should also further expand its gross margin on a QoQ basis in 3Q26, owing to the higher utilization and the tailwinds of price hikes.
- We think the momentum should remain favorable in the near term.
- We stay constructive on the stock, with current valuation at 29x 2027e P/E vs. a peak cycle level of 35-40x.

Exhibit 1: Hiwin's monthly sales YoY vs. its share price since 2015

Valuation Methodology and Risks

Hiwin Technologies Corp. (2049.TW)

Base case, P/E. We think this valuation methodology better captures Hiwin's earnings growth momentum, as its valuation tends to move with the business cycle. We apply a target multiple of 38x to our 2027 EPS estimate. We view this multiple as justified by the 47% operating profit CAGR we project for 2025-28.

Risks to Upside

- Stronger industrial automation demand pickup.
- Market share gains.
- Earlier-than-expected revenue contribution from humanoids.

Risks to Downside

- Weaker industrial automation demand.
- More pricing pressure.
- Market share loss.
- More broad-based impact on the global economy from geopolitical risks.

Ltd., GoerTek Inc, Hon Hai Precision, Innolux, Lenovo, Lingyi Itech Guangdong Co, Quanta Computer Inc., Xiaomi Corp, Yageo Corp., Zhen Ding.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality

of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.
Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.
Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of September 30, 2026)
The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.
For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

	Coverage Universe		Investment Banking Clients (IBC)			Other Material Investment Services Clients (MISC)	
Stock Rating Category	Count	% of Total	Count	% of Total IBC	% of Rating Category	Count	% of Total Other MISC
Overweight/Buy	1599	43%	455	48%	28%	783	44%
Equal-weight/Hold	1563	42%	394	42%	25%	763	43%
Not-Rated/Hold	2	0%	1	0%	50%	1	0%
Underweight/Sell	570	15%	96	10%	17%	227	13%
Total	3,734		946			1774	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

Important Disclosures for Morgan Stanley Smith Barney LLC Customers

Important disclosures regarding any material conflict of interest that can reasonably be expected to have influenced Morgan Stanley Smith Barney LLC's choice of a third-party research provider or the subject company of a third-party research report, are available on the Morgan Stanley Wealth Management disclosure website at www.morganstanley.com/online/researchdisclosures. For Morgan Stanley specific disclosures, you may refer to https://www.morganstanley.com/eqr/disclosures/webapp/generalresearch.

Each Morgan Stanley research report is reviewed and approved on behalf of Morgan Stanley Smith Barney LLC. This review and approval is conducted by the same person who reviews the research report on behalf of Morgan Stanley. This could create a conflict of interest.

Other Important Disclosures

Morgan Stanley Research policy is to update research reports as and when the Research Analyst and Research Management deem appropriate, based on developments with the issuer, the sector, or the market that may have a material impact on the research views or opinions stated therein. In addition, certain Research publications are intended to be updated on a regular periodic basis (weekly/monthly/quarterly/annual) and will ordinarily be updated with that frequency, unless the Research Analyst and Research Management determine that a different publication schedule is appropriate based on current conditions.

Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley produces an equity research product called a "Tactical Idea." Views contained in a "Tactical Idea" on a particular stock may be contrary to the recommendations or views expressed in research on the same stock. This may be the result of differing time horizons, methodologies, market events, or other factors. For all research available on a particular stock, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Morgan Stanley Research is provided to our clients through our proprietary research portal on Matrix and also distributed electronically by Morgan Stanley to clients. Certain, but not all, Morgan Stanley Research products are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience. For access to all available Morgan Stanley Research, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Any access and/or use of Morgan Stanley Research is subject to Morgan Stanley's Terms of Use (http://www.morganstanley.com/terms.html). By accessing and/or using Morgan Stanley Research, you are indicating that you have read and agree to be bound by our Terms of Use (http://www.morganstanley.com/terms.html). In addition you consent to Morgan Stanley processing your personal data and using cookies in accordance with our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html), including for the purposes of setting your preferences and to collect readership data so that we can deliver better and more personalized service and products to you. To find out more information about how Morgan Stanley processes personal data, how we use cookies and how to reject cookies see our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html). Please use the provided link to review the Terms and Conditions and Most Important Terms and Conditions for Morgan Stanley India Company Private Limited (https://www.morganstanley.com/assets/pdfs/about-us-global-offices/india/Terms_and_conditions.pdf) and the following link to review the audit report (https://ny.matrix.ms.com/eqr/research/webapp/researchdocs/MSICPL_Morgan_Stanley_Research_Audit_Report.pdf).

If you do not agree to our Terms of Use and/or if you do not wish to provide your consent to Morgan Stanley processing your personal data or using cookies please do not access our research. Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those

who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.

Greater China Technology Hardware

Integrated Power Solutions Driving Secular Demand

Increasing power consumption, along with the deployment of BBU/CBU/800/±400VDC/SST in AI clusters, could push the technology barrier higher and present growth opportunities for players with superior capabilities. Fuel cells could also emerge as a new opportunity amid power constraints.

Secular demand for power amid AI capex: AI-related power consumption will continue to increase, and we believe this will lead to secular demand for power-related components, such as power supply units (PSUs), battery backup units (BBUs), capacitor bank units (CBUs), coolant distribution units (CDUs), and so on. Moreover, the requirement for efficiency will inevitably necessitate the adoption of 800/±400 voltage direct current (VDC) in the power rack/center/block configuration (initially from late 2026 and broadly in 2028, we estimate), eventually extending to the deployment of solid state transformers (SST) in the longer term – all pointing to a more centralized power delivery architecture in the future. This trend of aggregation could raise the technology barriers amid the fusion of white/grey space, favoring players with better capabilities and execution. Overall, we forecast the datacenter PSU market size to grow at a 75% three-year CAGR to reach US$33bn in 2028.

Fuel cells to improve flexibility and resilience of AI power delivery: Despite the strong AI capex outlook (MSe global cloud capex +97%/20% YoY in 2026/2027), power has become a bottleneck, indicated by MS's forecast power shortfall of 5GW in 2026, scaling to a total 72GW through 2029 (see report). Fuel cells, among other alternative energy sources, could emerge as a good solution to pick up some slack and enhance efficiency through active micro grid management. Those who are able to offer comprehensive solutions from power sources to power delivery could be increasingly more competitive in the market.

Assuming coverage of Delta and Lite-On:

- Delta (OW, PT NT$2,500, based on 30x 2027/2028 P/E) should maintain its dominant position in the industry with its integrated power/thermal related solutions while fuel cells could add incremental growth opportunities in the longer term. We think a 30x P/E target multiple is justified by our estimated 63% earnings CAGR in 2025-28, driven by a 44% revenue CAGR and operating margin expansion to 22.1% in 2028 vs 15.1% in 2025,
- Lite-On (EW, PT NT$315, based on 17x 2027/2028 P/E), the second-largest player in AI power-related products, should also ride the tailwinds despite its slower progress in HVDC power racks and liquid cooling solutions. We think a 17x P/E target multiple is justified by our estimated 47% earnings CAGR in 2025-28 (29% revenue CAGR and 6.8ppt OPM expansion to 16.8% in 2028).

Executive Summary

AI cluster performance evolving to fulfill demand

The rapid adoption of artificial intelligence is driving a significant increase in global data center compute demand. Advances in foundation models, reasoning capabilities, agentic AI, and enterprise AI deployment are increasing the computational resources required for both training and inference. To support this growth, hyperscalers and model developers continue to deploy larger and more powerful AI clusters, driving demand for greater compute, memory, and networking capacity.

As AI infrastructure scales, cluster performance is increasingly determined by the efficiency of the entire system rather than the capabilities of individual processors alone. Compute, networking, cooling, and power infrastructure must all evolve together to support higher rack densities and larger deployments. While semiconductor innovation remains critical, supporting infrastructure is becoming an equally important factor in enabling future AI growth.

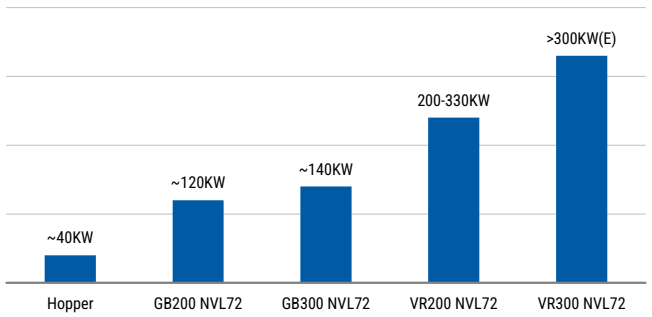
AI cluster performance is fundamentally a power problem

As AI clusters continue to scale in size and performance, power consumption is becoming one of the most important constraints on future infrastructure deployment. The power challenge is no longer limited to GPUs alone, as modern AI clusters comprise tightly integrated compute, networking, memory, storage, and cooling systems, all of which require increasing amounts of power as performance requirements rise. Consequently, the next phase of AI infrastructure investment should be viewed not only as a semiconductor upgrade cycle but also as a broad-based power infrastructure upgrade cycle.

Server power consumption has increased significantly across successive AI hardware generations. Nvidia's architecture roadmap illustrates the industry's migration from relatively modest server-level power budgets under the Ampere and Hopper generations toward rack-scale systems under Blackwell and future Rubin architectures. Estimated rack-level power consumption has increased from roughly 40kW for Hopper systems to approximately 120kW for GB200 NVL72 and 140kW for GB300 NVL72, with future Vera Rubin systems expected to approach 200-300kW per rack with current Vera Rubin systems reaching up to 330kW per rack while future Vera Rubin generations are expected to surpass these levels. As compute density continues to increase, power delivery infrastructure is becoming a critical enabler of system performance.

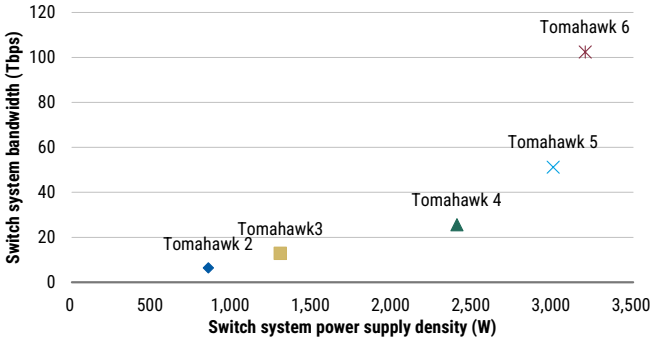
The increase in power consumption is not limited to compute hardware. Networking systems are also becoming increasingly power intensive as switch bandwidth scales from 100G architectures toward 800G and 1.6T generations. Despite substantial process-node improvements, switch ASIC power consumption has continued to rise due to increasing complexity and higher SerDes speeds. As a result, networking equipment now requires significantly larger power budgets than previous generations, creating additional demand for higher-capacity power supplies throughout the data center.

Exhibit 7: TDP roadmap for Nvidia racks



Source: Morgan Stanley Research

Exhibit 8: Power supply density for Tomahawks



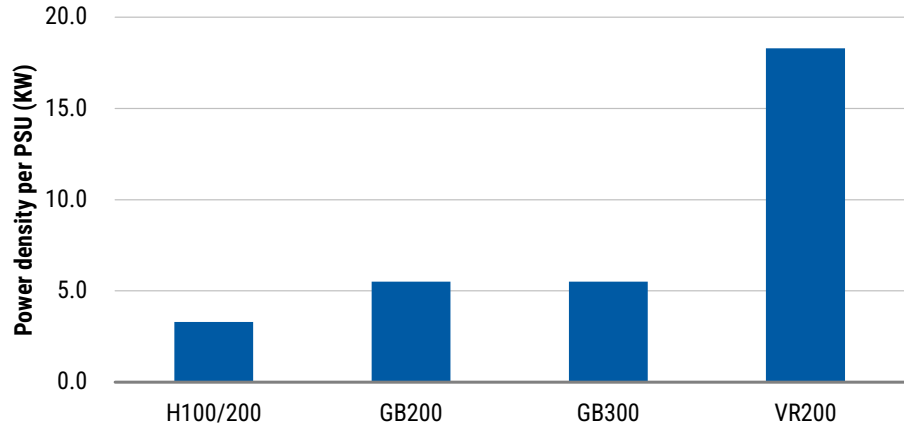
Source: Morgan Stanley Research

The growth in power consumption is driving a corresponding upgrade cycle for power-supply units (PSUs). Earlier AI server generations typically relied on multiple 3-3.3KW power supplies installed directly within individual server chassis. As the industry transitions toward rack-scale architectures, power conversion is increasingly centralized into dedicated power shelves capable of supporting substantially larger power loads. In Blackwell systems, power shelves utilize 5.5KW power supplies, while future Rubin-generation platforms are expected to increase PSU ratings to approximately 18KW, representing a significant increase in both PSU content and power density.

Delivering higher power within a similar footprint creates significant engineering challenges. Increasing PSU power density requires advances across multiple areas, including higher-performance power semiconductors such as silicon carbide (SiC) and gallium nitride (GaN), more efficient power-conversion topologies, smaller and more capable magnetic components, improved thermal-management solutions, and greater system integration. As output power increases, thermal constraints become increasingly important, making heat dissipation, airflow optimization, and mechanical design critical determinants of PSU performance.

Consequently, on top of the volume driven growth, the power-supply industry is benefiting from the technology driven dynamics, where efficiency, power density, and thermal performance are becoming key competitive differentiators. As AI rack power requirements continue to increase, PSU innovation will become an increasingly important component of the broader AI infrastructure investment cycle.

Exhibit 9: Power density per PSU trend in Nvidia server systems



Source: Nvidia, Morgan Stanley Research

Overall, we estimate the global datacenter power supply market will grow at a three-year CAGR of 75% to reach US$33bn in 2028 from US$6bn in 2025, driven mainly by server shipment growth, increasing power consumption per rack, and the adoption of HVDC power racks from 2027.

Exhibit 10: Global datacenter power supply market forecast

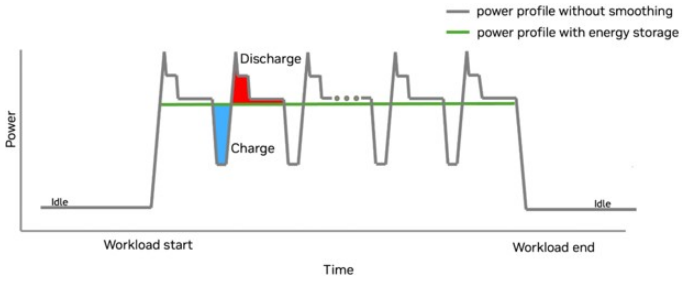
Complementary hardware for more resilient power delivery

As AI clusters become more power intensive, maintaining stable and resilient power delivery is emerging as a critical design priority. Traditional centralized power architectures are increasingly being complemented by localized energy-storage and power-conditioning technologies that can respond rapidly to dynamic workload demands.

Battery Backup Units (BBUs) represent one of the most important additions to modern AI power architectures. Positioned close to the computing workload, BBUs provide localized energy storage capable of responding significantly faster than facility-level backup systems. Their role extends beyond conventional backup power functionality. BBUs can

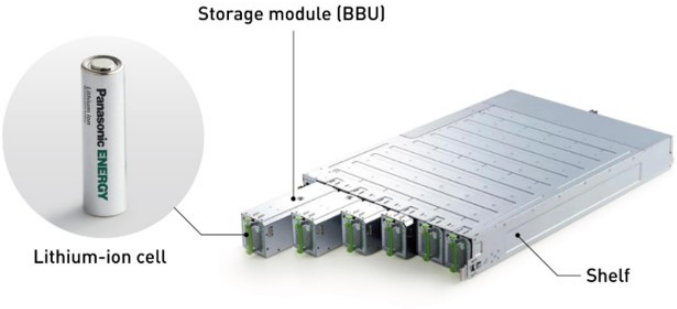
absorb transient fluctuations, smooth power ramps, and improve overall rack-level power stability. By providing local buffering capacity, BBUs help reduce the burden on upstream power distribution infrastructure while improving overall system resilience.

Exhibit 11: Concept of peak shaving for AI server power loads



Source: Nvidia

Exhibit 12: BBU



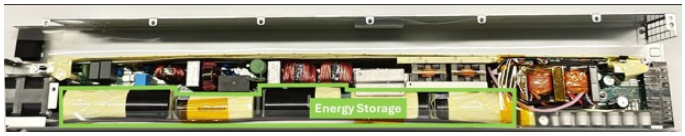
Source: Panasonic

Capacitor Backup Units (CBUs) address an even shorter-duration segment of the power stability challenge. Utilizing supercapacitors and other high-power-density storage technologies, CBUs can deliver and absorb power within milliseconds, making them particularly effective for managing rapid GPU power spikes. These systems act as shock absorbers within the electrical architecture, preventing sudden load changes from propagating throughout the broader power network. As AI rack power densities continue increasing, capacitor-based energy storage is becoming an attractive solution for improving power quality without requiring substantial oversizing of facility infrastructure.

Exhibit 13: CBU

Source: Panasonic

Exhibit 14: GB300 power shelf with integrated capacitors



Source: Nvidia

Together, BBUs and CBUs provide complementary benefits. BBUs are designed to handle longer-duration events, while CBUs are optimized for extremely fast transient response. The integration of these technologies enables operators to improve power quality, reduce stranded infrastructure capacity, enhance system reliability, and increase effective utilization of expensive electrical assets. As rack densities continue to rise, localized energy-storage solutions are likely to become a standard component of AI data center design rather than an optional enhancement.

The adoption of BBU and CBU architectures may also enable future increases in rack density. As operators attempt to push toward several hundred kilowatts per rack, localized power-buffering solutions can help mitigate transient peaks and reduce stress on grid-facing infrastructure. This allows operators to deploy higher-density computing resources without proportionately increasing upstream electrical capacity.

Exhibit 15: Comparison of CBU and BBU

Dimension	CBU	BBU
Primary storage medium	EDLC supercapacitors, LICs or high-capacitance	Typically lithium-ion battery cells managed by a BMS
Primary strength	High power, fast charge/discharge and frequent	Higher stored energy and longer sustained
Main function	Transient smoothing, peak shaving, voltage	Outage backup, source-transfer bridging and orderly workload
Response profile	Well suited to millisecond-class load support and	Fast switchover, but generally optimized for sustained support rather
Typical duration	Milliseconds to seconds; selected systems can extend toward tens of seconds or more	Commonly tens of seconds to several minutes, depending on battery and rack design
Power versus energy density	Higher power capability but lower energy storage per unit volume than a battery	Higher energy density, making it more economical for longer events
Cycle life	Eaton specifies more than one million cycles and up to 20 years for certain supercapacitor modules	Battery life is more sensitive to depth of discharge, temperature and repeated cycling; BMS supervision is therefore essential.
State management	Requires cell balancing, voltage/temperature monitoring and state-of-health tracking, but does not use a conventional battery fuel	Requires BMS functions including charge control, state of charge, state of health and cell protection
Best-fit use case	Repetitive AI power spikes, inrush events, PSU load leveling and bus stabilization	Power continuity through outages, brownouts or generator/source-transfer intervals

Source: Morgan Stanley Research

HVDC emerging as a necessity, with SST in the pipeline

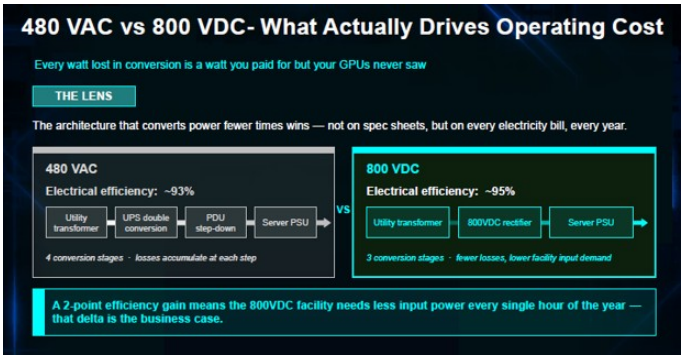
800VDC and ±400VDC progressing simultaneously

The rapid increase in AI rack power density is creating growing challenges for conventional power-distribution architectures. As rack-level power consumption rises from tens of kilowatts to several hundreds of KWs, electrical losses, cable size, thermal management requirements, and overall system complexity increase significantly. Under traditional low-voltage power architectures, delivering larger amounts of power requires proportionally higher current, which increases resistive losses and places greater stress on cables, connectors, busbars, and power-conversion equipment.

At the same time, every power-conversion stage introduces efficiency losses and generates additional heat. As AI deployments scale into multi-megawatt and eventually gigawatt-level campuses, even small efficiency improvements can translate into meaningful reductions in operating costs, cooling requirements, and infrastructure investment. Consequently, the industry is increasingly focused on power architectures that can reduce conversion stages, lower current levels, and improve overall power-delivery efficiency.

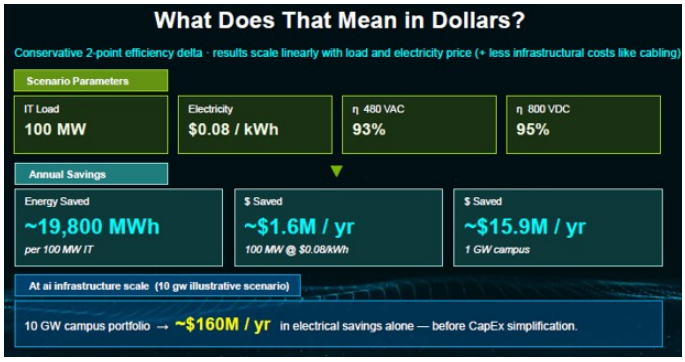
Against this backdrop, high-voltage direct current (HVDC) is emerging as one of the most important architectural upgrades for next-generation AI infrastructure. By increasing distribution voltage, HVDC allows the same amount of power to be delivered at a lower current, reducing conduction losses and improving system efficiency. Higher-voltage architectures also improve scalability for ultra-high-density rack deployments by alleviating some of the physical and thermal constraints associated with conventional power-distribution systems.

Exhibit 16: Better power efficiency for 800VDC architecture



Source: Delta

Exhibit 17: Better efficiency leads to cost savings



Source: Delta

Nvidia's roadmap illustrates the industry's gradual migration toward higher-voltage power architectures. Earlier AI server generations primarily utilized conventional power-delivery schemes centered around rack-level 48V distribution. As rack power requirements increased with Blackwell-generation systems, industry participants began evaluating higher-voltage architectures capable of supporting substantially greater power density. Looking ahead, the industry is increasingly converging around 800VDC as a potential next-generation standard for large-scale AI deployments, particularly as rack-level power consumption approaches several hundred kilowatts. The transition reflects the need to improve power-distribution efficiency while supporting the continued growth of AI computing infrastructure.

We believe that the adoption of the 800VDC power rack could start from late 4Q26, though it should be small scope deployment through 2027, since the in-rack power shelf is the reference design in the Vera Rubin NVL72 rack. Broader adoption should happen more likely from late 2027 and 2028, as the Vera Rubin Ultra rack further pushes up the power consumption.

Exhibit 18: HVDC deployment roadmap

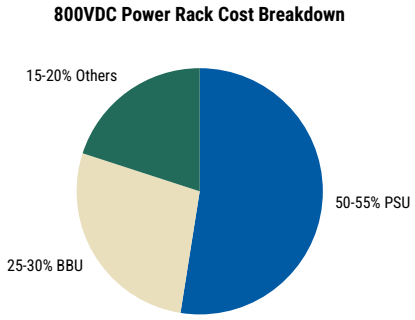
Focus Area	Status	Impact
Grounding & Protection	Architecture converging with UL and OEMs	Foundation for safe and reliable deployment
Equipment Certification	Certification pathways established and progressing	Accelerates deployment readiness
Protection Devices	MCCB available; SSCB ecosystem maturing	Enables fast fault isolation and higher availability
Busway, Connector & Whips	Standardized 125A architecture under development	Supports scalable rack deployment
High-Density Power Conversion	Rectifiers available; SST roadmap advancing	Enables future 800 VDC Compute Product

Source: Nvidia

The 800VDC power rack BOM is primarily driven by the PSU, which accounts for 50–55% of total cost, followed by the BBU at 25–30%, with other components comprising the remaining 15–20%. This cost structure reflects the broader functionality integrated into an HVDC power rack, combining power conversion, backup power and supporting components within a centralized architecture.

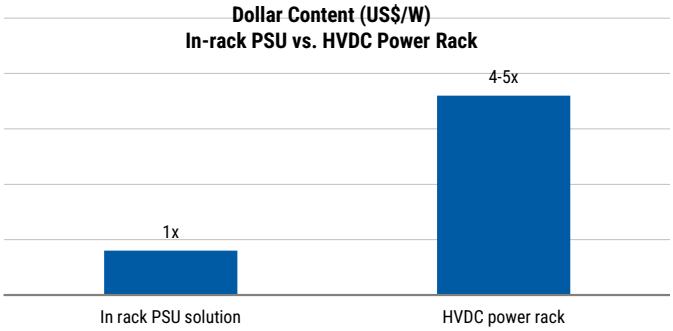
For power supply players, one of the most direct implications is that an HVDC power rack carries around 4–5x higher dollar content per watt compared with a conventional in-rack PSU solution, since the former integrates more components into a robust system and power supply players usually ship the entire rack instead of just the components.

Exhibit 19: BOM cost breakdown for an 800VDC power rack



Source: Morgan Stanley Research

Exhibit 20: Higher dollar content for HVDC power racks



Source: Morgan Stanley Research

However, the industry has not yet fully converged on a single architecture. While Nvidia's roadmap increasingly points toward 800VDC, several hyperscalers and members of the Open Compute Project (OCP) ecosystem have expressed interest in ±400VDC architectures. Both approaches deliver similar total voltage levels and pursue many of the same objectives, including lower current, higher efficiency, and improved scalability. The debate largely centers on implementation trade-offs rather than end goals.

Supporters of 800VDC generally highlight the advantages of a simpler single-bus architecture, potentially lower system complexity, and closer alignment with existing industrial high-voltage DC equipment. The architecture avoids the need to maintain balanced positive and negative voltage rails and may simplify certain aspects of power conversion and system integration. These characteristics make 800VDC particularly attractive in environments where operational simplicity and interoperability with existing electrical infrastructure are key priorities.

Advocates of ±400VDC, meanwhile, emphasize the advantages of a bipolar architecture. By creating positive and negative voltage rails around a neutral reference point, ±400VDC can potentially reduce insulation requirements, simplify certain fault-management scenarios, and provide improved flexibility for load balancing and future system expansion. Many hyperscalers also view the bipolar approach as being more compatible with long-term visions for highly distributed power systems incorporating energy storage, renewable energy, and microgrid functionality.

Importantly, the ultimate beneficiaries may be largely independent of which standard gains wider adoption. With the exception of certain power-semiconductor and protection-system requirements, many component suppliers across the power ecosystem remain

broadly agnostic between 800VDC and ±400VDC implementations. Higher-voltage architectures in either form require similar upgrades in power conversion, power management, cooling, connectors, magnetics, and infrastructure equipment. As a result, the industry's migration toward HVDC matters significantly more than the eventual selection of any single voltage standard.

Exhibit 21: Comparison of 800VDC and ±400VDC

Metric	±400VDC	800VDC
Voltage to ground	400V relative to ground	800V relative to ground
Voltage differential	800V	800V
Power distribution efficiency	High	Slightly higher
Scalability	Good	Excellent
Insulation requirements	Lower	Higher
Maintenance safety	Better	More challenging
System architecture simplicity	Dual-rail system	Single-bus system
Grounding Complexity	More complicated	Simpler
Electrical footprint	Small	Smaller
Ability to reduce conversion stages	Moderate	Highest
Long-distance distribution capability	Excellent	Excellent
Maturity of ecosystem	Better today	Early but rapidly developing
Industry players	OCP, hyperscalers	Nvidia
Long term industry direction	Transitional architecture	Likely end-state architecture

Source: Morgan Stanley Research

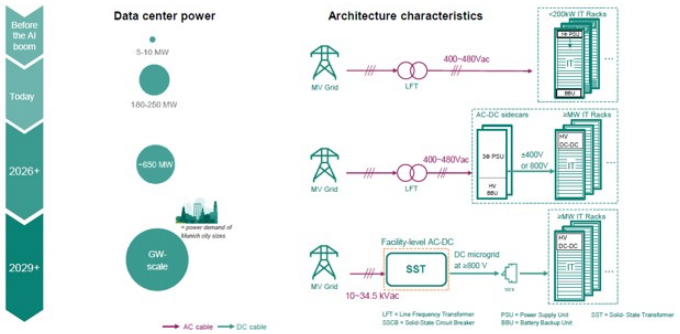
Solid-state transformers to follow after 800VDC/±400VDC matures

Looking further ahead, solid-state transformers (SSTs) represent a potential next-generation evolution of power infrastructure. Unlike traditional transformers that operate primarily as passive devices, SSTs leverage power electronics to provide voltage conversion, power conditioning, and bidirectional energy management within a single platform. This enables greater controllability and flexibility while supporting increasingly digitalized power networks.

Although SSTs remain at an early stage of commercialization and face challenges related to economics, reliability, and large-scale deployment, the technology aligns well with long-term data center trends. As AI campuses evolve into utility-scale power consumers incorporating energy storage, distributed generation, and advanced power management, SSTs could eventually become a key enabling technology.

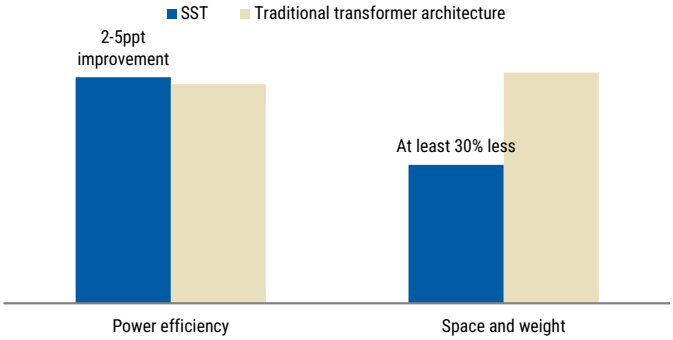
Therefore, while HVDC is expected to drive the next phase of power architecture upgrades, SSTs represent a longer-term technology roadmap that could further transform how future data centers distribute and manage electricity.

Exhibit 22: SST enabling more efficient power delivery architecture



Source: Infineon

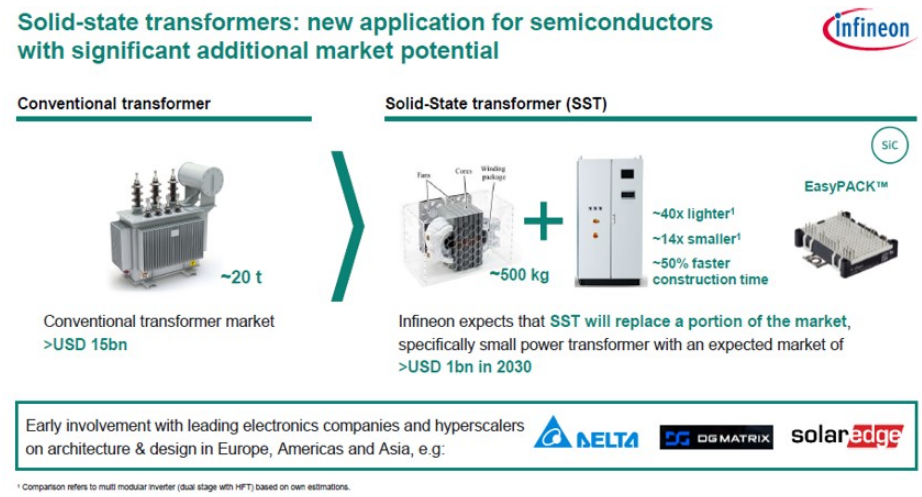
Exhibit 23: SST offers better power efficiency with at least 30% less space/weight



Source: Morgan Stanley Research

According to Infineon, SST could represent an emerging >US$1bn market opportunity by 2030, as the technology begins to replace a portion of the >US$15bn conventional transformer market, particularly in smaller-power applications. While SST penetration is expected to remain relatively modest versus the overall transformer market, the opportunity is significant for relevant players in the longer term.

Exhibit 24: SST to see initial adoption in 2030

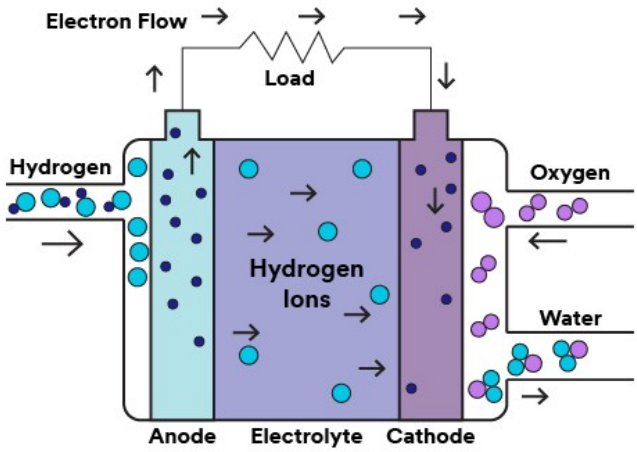


Source: Infineon

Fuel cells for better flexibility and resilience

Fuel cells generate electricity through an electrochemical reaction rather than combustion. Hydrogen, natural gas, biogas, or other fuels are supplied to the fuel cell stack, where chemical energy is converted directly into electricity, heat, and in some cases water. Unlike batteries, which store energy, fuel cells continuously generate power as long as fuel is supplied.

Exhibit 25: Fuel cell diagram



Source: 3M

Fuel cells can offer several benefits, including:

- **High energy efficiency:** Direct electrochemical conversion enables higher efficiency than conventional combustion-based power generation, reducing fuel consumption and operating costs.
- **Low carbon emissions**: Fuel cells produce minimal direct emissions and can support long-term decarbonization goals when powered by low-carbon fuels such as hydrogen.
- **Grid independence and energy security:** Provides reliable onsite power generation, reducing dependence on grid availability and improving energy resilience.
- **Long-duration energy storage enabler:** Hydrogen-based fuel-cell systems can complement renewable energy by storing energy over extended periods, supporting long-duration and seasonal energy storage.
- **Fuel flexibility:** Certain fuel-cell technologies can operate on hydrogen, natural gas, biogas, ammonia-derived hydrogen, and other hydrogen-rich fuels, allowing deployment using existing fuel infrastructure.
- **Low maintenance and quiet operation:** Limited moving parts reduce maintenance requirements while providing quieter operation than conventional combustion-based generators.
- **Scalable deployment:** Can be deployed across a wide range of power levels, from distributed backup systems to utility-scale installations, making fuel cells suitable for large AI data center campuses

However, the following challenging are hurdles for wider deployment:

- **High system cost:** Fuel cells remain more expensive than conventional power-generation technologies, limiting large-scale adoption.
- **Limited hydrogen infrastructure:** Hydrogen production, transportation, storage, and refueling networks remain underdeveloped in most regions.
- **Durability requirements:** Long-term reliability and stack lifetime remain key challenges, particularly for large-scale and mission-critical deployments.
- **Regulatory and safety considerations:** Hydrogen handling requires specialized infrastructure and compliance with stringent safety regulations, increasing deployment complexity.
- **Lack of standardization:** Multiple fuel-cell technologies compete across different applications, creating uncertainty around long-term technology standards and adoption paths.

Fuel cells have the potential to fundamentally reshape future data center power architectures. Traditionally, data centers rely on grid electricity as the primary power source and diesel generators for backup power. However, as AI-driven workloads significantly increase power demand and power availability becomes a key deployment constraint, hyperscalers are increasingly evaluating fuel cells not only as a backup-power solution but also as a potential primary power source. This could accelerate the transition from a grid-centric architecture toward one incorporating distributed onsite generation, enabling data center deployment in regions where utility power capacity is limited.

Over the longer term, fuel cells could become a core component of AI data center microgrids that integrate renewable generation, battery storage, hydrogen storage, and intelligent energy-management systems. Such an architecture would improve scalability, resilience, and energy independence while reducing reliance on centralized utility infrastructure. In addition, because fuel cells inherently generate DC power, they align well with the industry's migration toward HVDC-based power distribution architectures. This could simplify power delivery by reducing conversion stages between generation and IT equipment, improving overall system efficiency and supporting next-generation high-density AI deployment

Exhibit 26: Fuel cell in datacenter power delivery architecture

Stock picks

Delta (2308.TW, OW, PT NT$2,500)

Dominant supplier in the AI power supply offerings: Delta has been one of the most competitive players in power related components and systems, as its offerings spanning from the core power supply units, the complementary BBU/CBU for AI servers, the highly anticipated HVDC power rack, grey space power facilities to air/cooling solutions. We estimate that it has ~60% market share in the datacenter power supply market and is among the leading suppliers of the 800VDC/±400VDC power rack to Nvidia/hyperscalers in 2H26 (wider adoption likely from late 2027). Longer term, when the HVDC becomes more mature, the centralized power delivery architecture could migrate into SSTs, where Delta already has small volume shipment now. With the solid technology, close customer relationships and strong execution, we believe Delta should stay competitive even amid the fusion of the white space and grey space.

Extending from power delivery to power source: In addition to the offerings in the power delivery, Delta signed a licensing agreement with Ceres Power (CRW.GB) for its solid oxide fuel cell (SOFC) technology in early 2024. This could extend its business scope into the power source area. which we believe could add more value to its customers as it could help mitigate the power constraints for datacenter build and enhance the operational efficiency through active micro grid management.

Solid near term momentum: Despite the slower revenue growth owing to the component supply tightness in 3Q26, we expects its 4Q26 revenue to grow by double digit % QoQ on alleviated component supply and solid demand. 3Q26 GM should be flat to slightly up QoQ and 4Q26 might see further expansion on the tailwinds price hikes.

OW with PT of NT$2,500: We see power/thermal as one of the major secular AI related themes in the downstream tech space and Delta is well positioned to benefit, potentially driving a 63% earnings CAGR in 2025-28, in our estimate. We thus assume the coverage of Delta with an OW rating and the PT of NT$2,500, based on 30x 2027/2028 P/E. Our target multiple implies a PEG of 0.5 vs. the average PEG of 1.2 in 2020-25, when the stock was trading at an average 12M forward P/E of 22x with the earnings CAGR of 19%.

Lite-On (2301.TW, EW, PT NT$315)

Rising tide lifting all boats: Lite-On is the second largest power supply vendor globally and has been engaging with hyperscalers regarding the ASIC and Nvidia GPU servers. Looking ahead, it expects to expand its share in a couple of hyperscalers from late 2026. It should have over 50% of the total revenue generated from the cloud segment for PSUs, BBUs, and to a lesser extent, other mechanical components like liquid cooling, chassis/rack, etc. Moreover, it also has the HVDC power rack solutions ready and is qualifying with potential customers. The cloud shall remain as the major growth driver in the coming years.

Aspiration in the optical communication space: Lite-On has always had an opto business (10-20% of total revenue in 2026) in both visible and invisible light applications. Post the strategic investment at Dense Light (21% stake), an InP epi wafer and chip process manufacturer, it plans to leverage its expertise in packaging and provides the optical

modules and engine for the data interconnects. While the end applications looks promising, we think it might take some time to see more meaningful revenue contribution in Lite-On.

Cloud momentum extending into the coming quarters: We expect its 4Q26 revenue to grow by double digit QoQ driven mainly by the could segment and GM should normalize at ~25% in 2H26 vs. 27.2% in 2Q26 on some inventory write-off reversal and high margin product shipment delayed from the previous quarter.

EW with PT of NT$315: We think Lite-On will grow along with the AI capex cycle, driven by its power-related offerings (47% earnings CAGR in 2025-28, in our estimate), though execution and progress with new customers is worth monitoring. We assume coverage of Lite-On with an EW rating and a PT of NT$315, based on 17x 2027/2028 P/E. Our target multiple implies a PEG of 0.4 vs. the average PEG of 1.6 in 2020-25, when the stock was trading at an average 12M forward P/E of 14x on an earnings CAGR of 9%.

Panasonic Holdings (EW, PT ¥4,700, covered by Kazuo Yoshikawa)

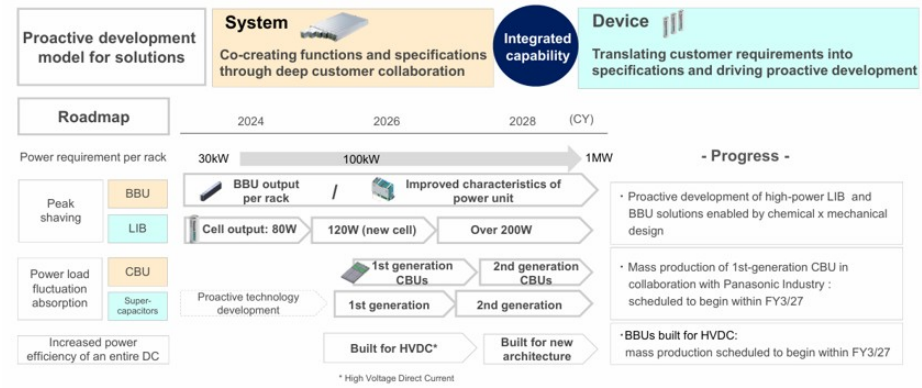
Panasonic has an approximately 80% share of the BBU market and is well positioned to benefit from rising AI data center power demand: The company expects data center energy storage revenue to grow from ¥322bn in FY3/26 to approximately ¥550bn in FY3/27 and around ¥1trn in FY3/29. Importantly, all of the business underpinning its FY3/29 revenue target has already been awarded, meaning agreements have been reached with customers on product development and orders.

BBU: Panasonic has begun limited mass production of new high-capacity BBU cells above 200W, with products adopted by a major GPU vendor and ramping from June-July. Discussions for next-generation server platforms are in the final stages, and the company expects to maintain its approximately 80% market share. It also sees scope for higher pricing as rack-level power consumption rises.

The company is also close to securing awards for BBUs used in dedicated power racks. As its medium-term plan includes only already-awarded business, additional design wins could provide upside.

CBU: CBUs are emerging as a new growth opportunity as GPU and ASIC power consumption increases. Panasonic is working with power-supply vendors to propose integrated BBU+CBU solutions and is receiving inquiries from US and Chinese hyperscalers, including customers that were not previously BBU users.

Exhibit 27: Panasonic Holdings: Strengthen proposal and development capabilities for the next generation



Source: Company data

Risks to our positive view

Risks to our positive view on power-related demand include:

- Component supply tightness leading to lower shipment of products
- Shortfall in hardware shipments, yield issues, electricity availability, etc. slowing down datacenter builds
- Lower-than-expected penetration of new power delivery architectures like 800VDC/±400VDC, SST, etc.
- More intense competition leading to margin erosion among most players
- Hyperscalers prove unable to finance aggressive capex through internal and external funding.

AI Cluster Performance Evolving to Fulfill Demand

AI adoption driving exponential growth in compute demand

AI is becoming a mainstream computing workload

Over the past three years, generative AI has evolved from a research application into a core technology platform. Consumer applications such as ChatGPT, Claude, Gemini, and Copilot now serve hundreds of millions of users globally, while enterprises are increasingly embedding AI into software development, customer service, document analysis, enterprise search, healthcare, financial research, and industrial automation.

Historically, software demand scaled roughly with the number of users. AI demand is fundamentally different because every user interaction consumes computational resources in real time. Unlike traditional cloud applications, where the bulk of computation occurs during software development, AI applications continuously consume compute whenever a model generates a response. Consequently, rising AI adoption directly translates into higher demand for data center compute resources.

Model complexity continues to increase

The AI industry has historically improved model performance through scaling laws: larger models trained on larger datasets using more compute generally produce better outcomes. While efficiency improvements continue, leading AI developers remain committed to scaling model capabilities.

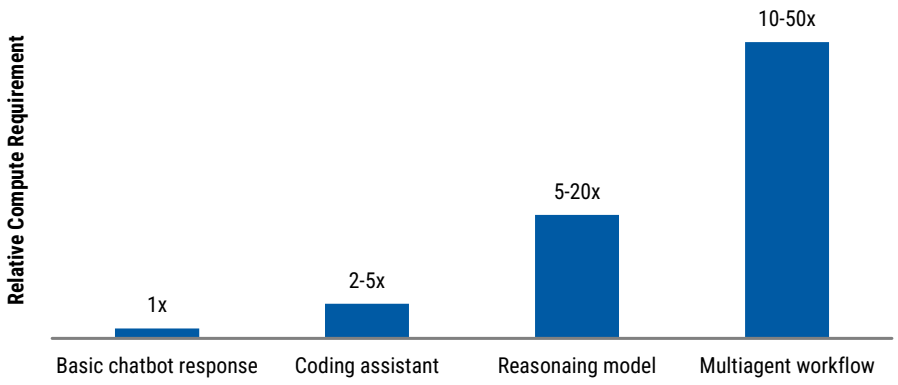
More importantly, the industry is moving beyond conventional language models toward significantly more compute-intensive architectures.

Reasoning models

Traditional LLMs generate answers directly from a prompt. New reasoning models perform multiple internal computational steps before producing a response. Instead of generating a few hundred output tokens, advanced reasoning systems may generate thousands or even tens of thousands of internal reasoning tokens while evaluating different solution paths. This dramatically increases inference workloads.

The industry is increasingly shifting from "parameter scaling" toward "test-time compute scaling," where additional compute is consumed during inference to improve answer quality. From an infrastructure perspective, this is highly significant because inference workloads occur continuously rather than once during model training.

Exhibit 28: Increasing demand for compute power from reasoning models



Source: Morgan Stanley Research estimates

Agentic AI

The next wave of AI applications involves autonomous agents capable of planning, executing, verifying, and refining tasks.

Instead of generating a single answer, an AI agent may search multiple information sources, run code, validate results, generate follow-up tasks, and produce a final response. Each step requires additional inference cycles.

A workflow that previously required one model invocation may now require dozens of model calls, substantially increasing compute consumption per user.

Multimodal AI

AI models are increasingly processing images, video, audio, sensor data, and text simultaneously.

Video understanding is particularly compute intensive because each second of video contains vastly more information than a text prompt.

As multimodal AI adoption grows, compute demand per query rises significantly, creating another structural driver of accelerator demand.

Training demand remains robust

Although inference is becoming the largest source of AI compute demand, training workloads continue to expand. Frontier model development increasingly requires clusters containing tens of thousands of accelerators operating simultaneously.

Training runs are becoming larger because developers are pursuing larger parameter counts, more training data, longer training durations, multimodal datasets and reinforcement learning and reasoning optimization

Consequently, each new generation of foundation models typically consumes substantially more compute than the previous generation.

Importantly, training infrastructure sets the baseline for future inference deployment. Every major model developer must maintain access to large-scale training clusters to remain competitive, supporting continued demand for high-end AI accelerators.

More compute requests to be fulfilled by better chip performance

Rising compute demand cannot be addressed simply by adding more servers. Modern AI workloads increasingly encounter bottlenecks related to memory bandwidth, interconnect performance, power consumption, and cooling. As a result, each new generation of AI hardware delivers improvements across multiple dimensions.

Compute performance

The latest AI accelerators provide several-fold performance improvements versus prior generations. For example, NVIDIA's Blackwell architecture was specifically designed to support both large-scale training and high-volume inference, with significant gains in AI throughput compared with previous Hopper-based systems. Performance improvements are necessary because reasoning and agentic workloads require substantially more operations per query.

Memory capacity and bandwidth

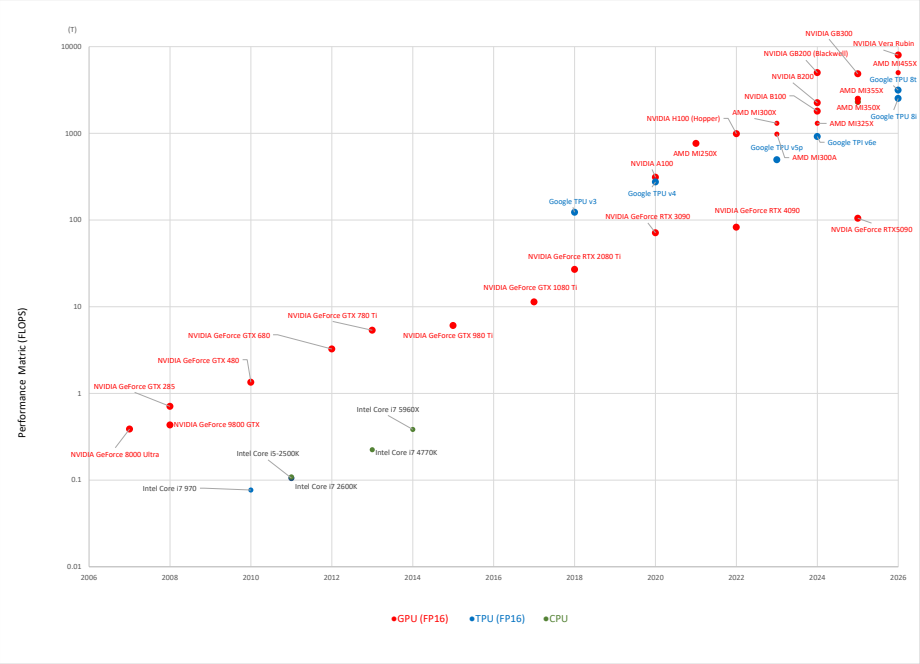
AI models are increasingly constrained by memory rather than raw compute, because longer models, longer context windows, reasoning models and agentic workflows all require more memory. As model complexity increases, modern high-end accelerators usually incorporate hundreds of gigabytes of High Bandwidth Memory (HBM), providing memory bandwidth measured in multiple terabytes per second.

Interconnect performance

As AI clusters scale from hundreds to thousands of accelerators, communication between processors becomes increasingly important. A large AI training cluster effectively behaves like a single massive computer. Consequently, networking technologies such as NVLink, InfiniBand, Ethernet, etc., have become critical enablers of AI scaling.

Many AI workloads can no longer be accelerated simply by increasing GPU performance; cluster interconnect bandwidth must also improve.

Exhibit 29: Compute power for HPCs continuing to evolve



Source: Company data, Morgan Stanley Research

AI Cluster Performance Is Fundamentally a Power Problem

As AI clusters become larger and more powerful, every component within the cluster must deliver higher throughput, lower latency, and greater bandwidth. Achieving these improvements inevitably requires more electrical power.

Therefore, the power challenge is no longer limited to GPUs. Modern AI clusters are highly integrated systems comprising compute servers, networking fabrics, memory subsystems, storage infrastructure, and cooling equipment. As cluster performance increases, power consumption rises across the entire infrastructure stack.

In our view, the next phase of AI infrastructure investment should be viewed not simply as a semiconductor upgrade cycle, but as a broad-based power consumption cycle driven by the need for ever-higher AI cluster performance.

Server systems seeing increasing TDP

Nvidia's AI-server power roadmap is best understood as a transition from chip-defined, air-cooled nodes to power-, cooling- and fabric-constrained rack-scale computers: the Ampere-era A100 SXM carried a disclosed 400W standard TDP—up to 500W in custom thermal designs—with 40/80GB HBM2/HBM2e and 600GB/s NVLink, while the eight-GPU, dual-AMD-EPYC DGX A100 was a conventional 6U server with a 6.5KW maximum input rating, meaning GPU silicon represented only roughly half of the node envelope once CPUs, NVSwitches, memory, NICs, drives, fans and conversion losses were included.

Hopper stepped the H100 SXM to a disclosed 700W TDP, 80GB HBM3, roughly 3TB/s memory bandwidth and 900GB/s fourth-generation NVLink, while H200 retained essentially the same Hopper compute architecture and power profile but substituted 141GB of faster HBM3e at 4.8TB/s—making H200 primarily a memory-capacity/bandwidth upgrade rather than a compute-TDP step-up—and Nvidia rates the eight-GPU, dual-Xeon DGX H100/H200 at 10.2KW maximum input, versus 6.5KW for DGX A100;

The architectural discontinuity arrives with GB200. Rather than treating an eight-GPU server as the scale-up unit and using InfiniBand/Ethernet primarily between nodes, Grace Blackwell NVL72 makes the entire rack the scale-up domain, integrating 18 one-U compute trays—each with two 72-core Grace Arm CPUs and four Blackwell GPUs—plus nine NVLink switch trays, management switches, , a 50–51V DC busbar, copper NVLink cartridges and liquid manifolds, so that 36 CPUs and 72 GPUs operate as one low-latency NVLink-connected system. Based on the same compute die, Nvidia upgraded the HBM content to further improve the performance of GB300 chip. Overall, the rack level power consumption is estimated at ~120KW for the GB200 NVL72 and ~140KW for the GB300 NVL72.

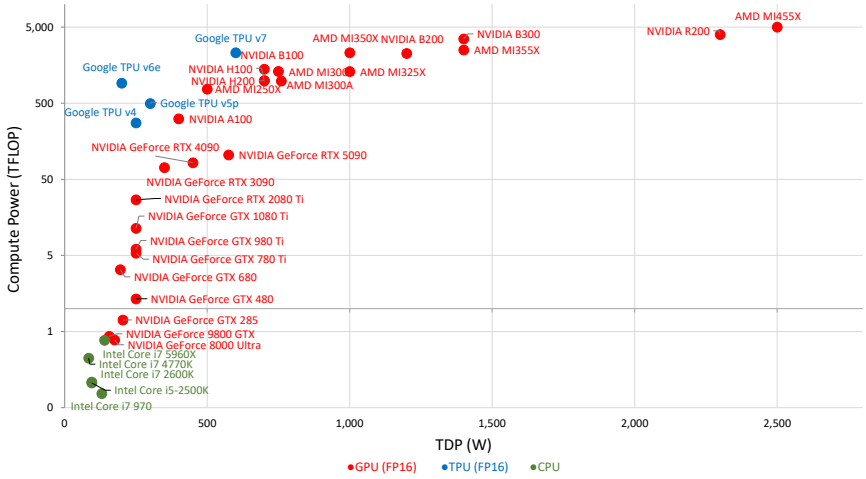
Vera Rubin—often called VR200/R200 in industry roadmaps—pushes the same rack-level philosophy further. Nvidia's disclosed architecture combines 72 dual-die Rubin GPUs with 36 new Vera CPUs, replacing Grace's 72 Arm Neoverse cores with 88 custom Olympus cores, raising CPU memory capacity and bandwidth to as much as 1.5TB LPDDR5X and 1.2TB/s, and doubling coherent CPU–GPU NVLink-C2C bandwidth to 1.8TB/s; Rubin itself moves from HBM3e to 288GB HBM4 at up to 22TB/s, introduces a third-

generation Transformer Engine and raises sixth-generation NVLink scale-up bandwidth to 3.6TB/s per GPU, while ConnectX-9 provides 1.6Tbps/GPU scale-out connectivity and BlueField-4 increasingly offloads storage, security and infrastructure processing.

Nvidia has not published a simple Rubin chip TDP in its primary datasheet, but our supply chain checks indicate roughly 1.8kW at an efficiency-oriented operating point and up to approximately 2.3kW at the performance mode, which is consistently corroborated by system vendors, with ASUS specifying 187kW Max-Q and 227kW Max-P for its fully liquid-cooled Vera Rubin NVL72.

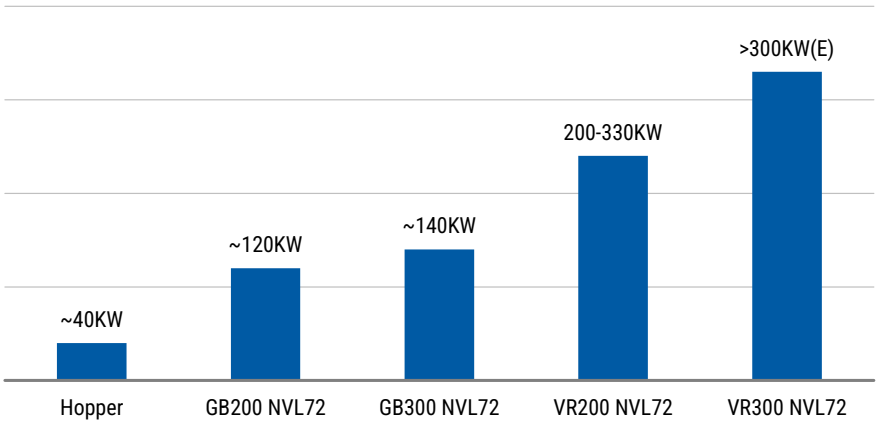
Looking ahead, we expect this trend to extend into the future along with the technology advancement and more critical workloads.

Exhibit 30: Compute power vs. TDP for HPCs



Source: Company data, Morgan Stanley Research

Exhibit 31: TDP roadmap for Nvidia racks



Source: Company data, Morgan Stanley Research

Networking consuming more power as well

The network switch system is another key devices within the datacenter and has been evolving over the past years, driven primarily by advances in the switch ASIC. From Tomahawk 1 (2014) to Tomahawk 6 (2025), the process node shrank from 28nm to 3nm, while aggregate switching bandwidth increased from 3.2 Tbps to 102.4 Tbps, representing a 32× increase. Over the same period, SerDes speed improved from 25 Gbps NRZ to 200 Gbps PAM4, enabling maximum port speeds to scale from 100G to 1.6T.

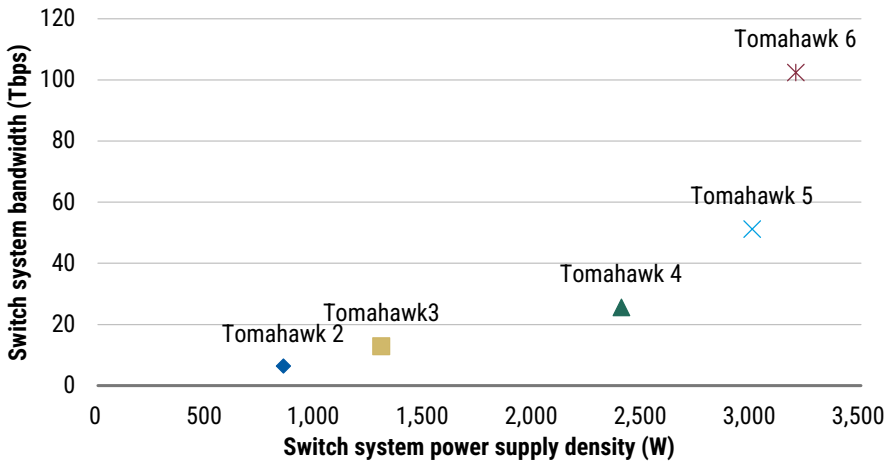
While process scaling significantly improved switching efficiency, it did not prevent ASIC power from rising. ASIC TDP increased from 150 W to 800 W, reflecting the growing complexity of higher radix switches and faster SerDes interfaces.

The impact of ASIC scaling is evident at the system level. As switch bandwidth increased from 100G-class systems to 800G and 1.6T platforms, power delivery requirements grew dramatically. Representative PSU ratings increased from 850W in Tomahawk 2 systems to 3,200W in Tomahawk 6 systems, nearly a 4× increase.

The rise in PSU power is driven not only by the higher ASIC TDP, but also by the growing power consumption of high-speed optics, increased cooling requirements, and larger overall system power budgets. As systems evolved from 100G to 1.6T ports, switch vendors were forced to add more fan redundancy, larger heatsinks, and in some cases larger chassis footprints. For example, Tomahawk 6 systems have expanded to 4U form factors with 7+1 fan redundancy to accommodate the thermal load associated with 102.4 Tbps switching capacity.

Alongside the increasing power consumption of the server racks, network switches are also witnessing higher power budgets as well.

Exhibit 32: Power supply density for different network switch generations



Source: Company data, Morgan Stanley Research

Power supply growing on both volume and specs

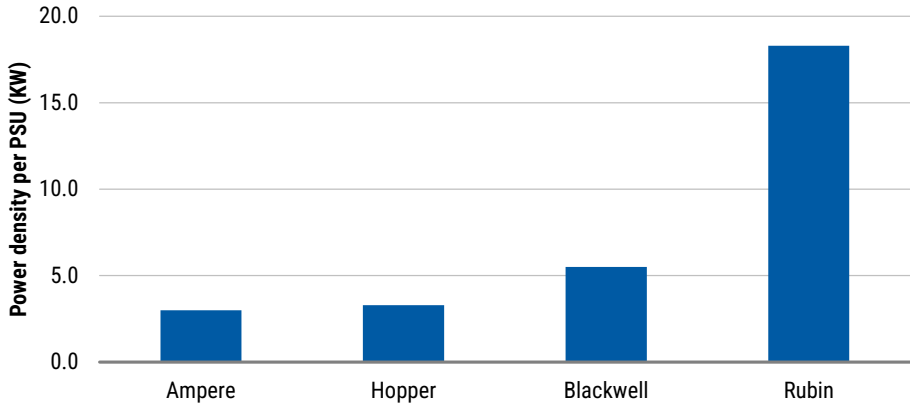
PSU spec upgrade trend

In response to the increasing power consumption of the AI servers, the power supply architecture has been migrating as well. in the A100 and H100/200 single system servers, 6 power supply units are placed directly inside the chassis, with each capable to deliver 3.0-3.3KW of power.

When Nvidia make a broad based move to the rack level server solution from the Blackwell generation, the power supply units were no longer placed directly within the chassis housing the HPCs that consume power; instead, power supply units are separated and grouped into power shelves. In the GB200/300 systems, there are 8 power shelves sitting on the same rack as the compute trays and switch trays, each enclosing six 5.5KW power supply units.

For the upcoming Vera Rubin rack, the power supply unit will be upgraded to 18.3KW of output to comprise a power shelf of 110KW, and each power shelf will take 3U of space on the rack vs. 1U in the Blackwell generation.

Exhibit 33: Power density for PSUs in Nvidia server systems



Source: Company data, Morgan Stanley Research

Challenges increasing the power density of PSUs

To come up with power supply unit with higher power density, manufacturers might need to solve the following potential hurdles:

Better power semiconductors (SiC and GaN)

The biggest improvement in PSU power density comes from replacing traditional silicon power chips with newer materials such as silicon carbide (SiC) and gallium nitride (GaN). These devices waste less energy during power conversion and can operate at much higher speeds. As a result, many supporting components inside the PSU—such as transformers and inductors—can be made significantly smaller. This allows PSU manufacturers to fit more output power into the same physical size while also improving efficiency. In many ways, SiC and GaN have become the foundation for the latest generation of high-density AI server power supplies.

More efficient power conversion designs

Modern PSUs use more sophisticated circuit designs, i.e., bridgeless PFC vs. conventional one, that reduce energy losses during power conversion. A conventional boost PFC includes a diode bridge and therefore incurs multiple semiconductor conduction drops. A bridgeless totem-pole PFC reduces the number of devices in the active current path and is now a preferred architecture for dense server PSUs. Instead of simply converting electricity from one voltage to another, newer architectures are designed to minimize wasted energy throughout the process. Higher efficiency means less heat is generated, which directly enables higher power density. This is particularly important in AI servers, where even small efficiency improvements can translate into meaningful reductions in heat generation and cooling requirements.

Smaller and smarter magnetic components

Transformers and inductors are often among the largest components inside a PSU. A major area of innovation is reducing their size without sacrificing performance. Manufacturers are increasingly using planar magnetics, where copper traces on circuit boards replace traditional wire windings. These designs are thinner, easier to cool, and more space-efficient. Some suppliers are also combining multiple magnetic functions into a single component, further reducing overall volume. As PSU power levels increase from 3 KW to 5.5 KW and beyond, shrinking magnetic components becomes one of the most important contributors to power-density improvement.

Improved thermal management

As power output increases, heat becomes the primary obstacle to higher density. Even highly efficient PSUs still generate a significant amount of heat. Therefore, manufacturers are investing heavily in better cooling solutions, including optimized airflow paths, advanced heatsinks, vapor chambers, and liquid-cooling technologies. The goal is to remove heat more effectively so that components can operate safely even when packed more tightly together. In many modern PSU designs, thermal engineering is just as important as electrical engineering in determining achievable power density.

Higher component integration

Another way to increase power density is to reduce the amount of unused space inside the PSU. Manufacturers are integrating more functions into fewer components and using three-dimensional layouts that make better use of available volume. Components are stacked, arranged vertically, or combined into integrated modules to maximize space utilization. This approach is similar to how smartphones have become more powerful without becoming larger—the same principle is increasingly being applied to server power supplies.

Higher efficiency creates more thermal headroom

Efficiency improvements provide a double benefit. First, less electricity is wasted. Second, less heat is generated. For example, a 5.5 kW PSU operating at 97.5% efficiency generates roughly 30% less heat than one operating at 96.5% efficiency. While a one-percentage-point improvement may appear small, it can remove tens of watts of heat from the system. This allows engineers to either increase output power within the same form factor or reduce cooling requirements while maintaining existing power levels.

Reducing the size of energy storage components

Server PSUs contain capacitors that store energy and maintain power delivery during short interruptions. Historically, these capacitors occupied a significant amount of space. Newer designs use smarter control techniques that allow manufacturers to achieve the same performance with smaller capacitor banks. Reducing capacitor volume frees up valuable internal space that can be used for higher power output or additional functionality.

For example, in Infineon's 3.3 KW example, the calculated capacitance for a conventional 10ms hold-up implementation was approximately 2.5 mF; allowing deeper discharge through a baby-boost stage reduced the requirement to about 900 µF. The 12 KW design similarly uses a bidirectional buck-boost buffer to achieve 20ms hold-up at full load without the capacitor volume that a passive solution would require. The penalty is additional semiconductors, an inductor, control software and failure modes, but the net volumetric benefit can be substantial.

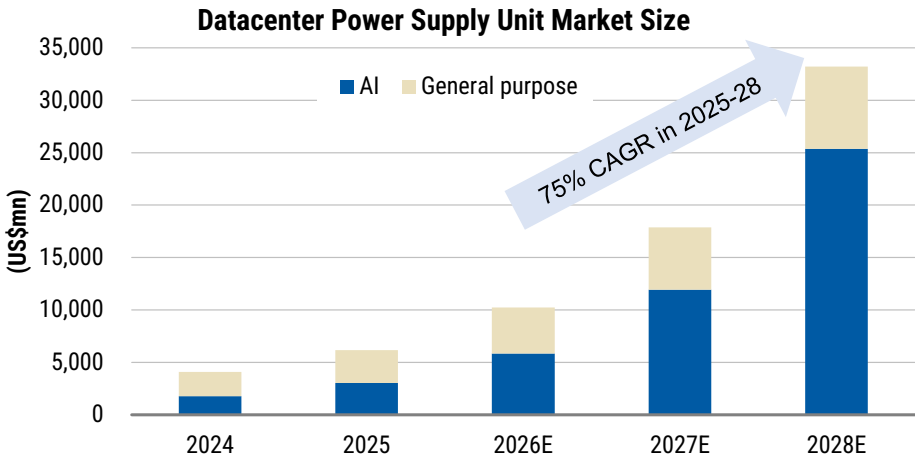
Advanced mechanical design

Power density is ultimately measured in watts per unit volume, making physical packaging extremely important. Manufacturers continuously optimize component placement, airflow channels, connector design, and enclosure structures to eliminate unused space. The best PSU designs are often not defined by a single breakthrough component but rather by hundreds of small mechanical optimizations that collectively improve volumetric efficiency.

Datacenter PSU market size to grow at a 75% CAGR in 2025-28

Overall, we estimate the global datacenter power supply market will grow at a three-year CAGR of 75% to reach US$33bn in 2028 from US$6bn in 2025, driven mainly by server shipment growth, increasing power consumption per rack, and the adoption of HVDC power racks from 2027.

Exhibit 34: Global datacenter power supply market forecast



Source: Company data, Morgan Stanley Research estimates

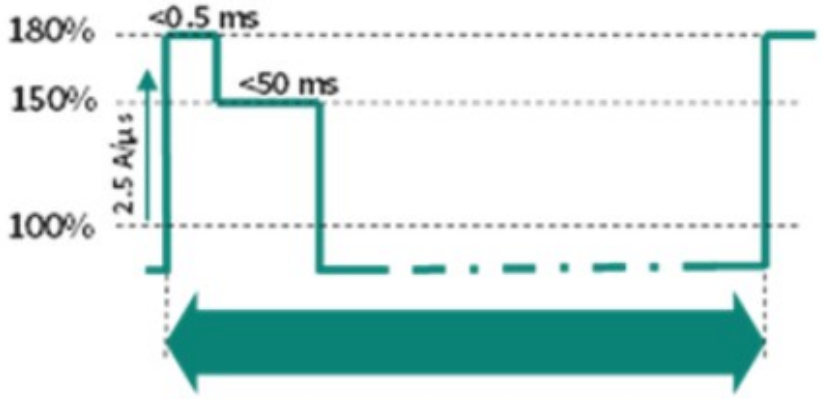
Complementary Hardware for More Resilient Power Delivery

Transient power spikes at AI servers

AI servers have a much more dynamic power profile than conventional enterprise servers because GPU utilization changes sharply throughout a workload. During large-model training, thousands of GPUs typically operate in a bulk-synchronous manner, and power consumption approaches the accelerator's design limit during tensor-compute phases, then falls during collective communications, check pointing, data movement, or periods in which GPUs wait for slower devices to synchronize. Inference can create a similar pattern as request arrivals, batching, context length and token-generation activity change rapidly.

Because the GPUs perform these transitions together, the power variation of one accelerator is multiplied across the server, rack and cluster rather than being averaged out by unrelated workloads, so the magnitude of the challenge is also rising with system density. Power spikes are therefore not simply the result of higher average consumption; they reflect the combination of higher accelerator power, more GPUs per system and increasingly synchronized workload behavior.

Exhibit 35: Transient power spikes at AI servers



Source: Infineon

System performance and reliability potentially compromised

The key issue is that power delivery systems are designed to supply a relatively stable amount of power, while AI workloads can change power demand almost instantaneously. When the load changes faster than the power-delivery system can react, a temporary mismatch occurs between power demanded by the GPUs and power supplied by the PSU, creating electrical instability throughout the server.

Sudden increases in GPU demand lead to voltage drops

When GPUs transition from a low-utilization state (communication, synchronization, checkpointing, etc.) to a full-compute state, their current demand can increase within microseconds. However, the PSU cannot instantly increase its output because its control loop requires time to detect the load change and adjust power conversion.

During this response period, the additional energy must come from capacitors located throughout the power chain. As these capacitors discharge, the voltage on the DC bus begins to fall, creating voltage drop.

If the drop becomes sufficiently large, several operational issues can occur:

- GPU throttling: The GPU reduces clock speed or performance to remain within safe operating limits.
- Computation errors: Voltage instability can affect timing margins in high-speed processors and memory.
- Unexpected resets or shutdowns: Protection circuits may trigger if voltage falls below specified thresholds.
- Training interruption: Large AI training jobs running across thousands of GPUs may fail if even a small number of nodes experience instability.

In a large AI cluster, a single server failure can force the entire training job to restart from the latest checkpoint, resulting in significant productivity loss.

Sudden decreases in GPU demand results in voltage spike

The opposite problem occurs when GPUs rapidly reduce power consumption.

For example, after a compute-intensive phase, GPUs may enter a communication phase where power consumption drops sharply. The PSU, however, is still delivering power based on the previous load condition. The excess energy has nowhere to go immediately and accumulates in the DC bus, causing a temporary voltage spike.

This can create:

- Overvoltage stress on components
- Protection-circuit activation
- Accelerated degradation of capacitors and voltage regulators
- Higher risk of component failure over time

Although individual spikes may be small, AI servers can experience these transitions continuously during training, causing repeated stress throughout the power-delivery chain.

Excessive current surges throughout the system

Power spikes are not only a voltage problem—they also create large current excursions.

A 1KW increase in power demand at 12V requires roughly 83A of additional current. In modern AI servers, where multiple GPUs can change utilization simultaneously, current swings can reach hundreds of amperes within a very short period.

These current surges lead to:

- Higher conductor losses
- Increased connector heating
- Greater stress on voltage-regulator modules (VRMs)
- Larger thermal fluctuations in power components
- As GPU power ratings rise to over 1KW, the magnitude of these transient currents becomes increasingly difficult to manage.

Thermal cycling and reliability degradation

Perhaps the most overlooked issue is the impact on long-term reliability.

Every power excursion creates a corresponding temperature excursion. When power rises, semiconductor junction temperatures increase; when power falls, temperatures decrease. This repeated heating and cooling cycle occurs thousands or even millions of times over a system's lifetime.

The result is accelerated wear on:

- Electrolytic capacitors
- Power MOSFETs
- Solder joints
- PCB interconnects
- Connectors and busbars

Consequently, even if average power remains within specification, transient power spikes can shorten component lifetime and increase failure rates.

Infrastructure overdesign and lower efficiency

To prevent instability, operators often provision the power infrastructure for the worst-case peak rather than average consumption.

For example:

- A rack averaging 80KW may need infrastructure sized for 120-140KW transient peaks.
- PSUs must be oversized to accommodate short-duration excursions.
- UPS systems must reserve capacity for sudden load increases.
- Cooling systems must handle peak thermal output.

This creates a significant amount of stranded capacity, where expensive electrical and cooling infrastructure remains underutilized most of the time. Furthermore, PSUs and UPS systems typically operate most efficiently near their optimal loading point; oversized systems therefore tend to operate at lower efficiency, increasing operating costs.

Conventional power delivery systems not designed to deal with power volatility

In the conventional power delivery architecture, the UPS protects the data hall against utility outages and power-quality disturbances, while the PSU converts upstream power into the tightly regulated DC output required by the server. Both remain essential in the modern AI server clusters, but neither was originally optimized to absorb large, repetitive and synchronized AI load steps economically.

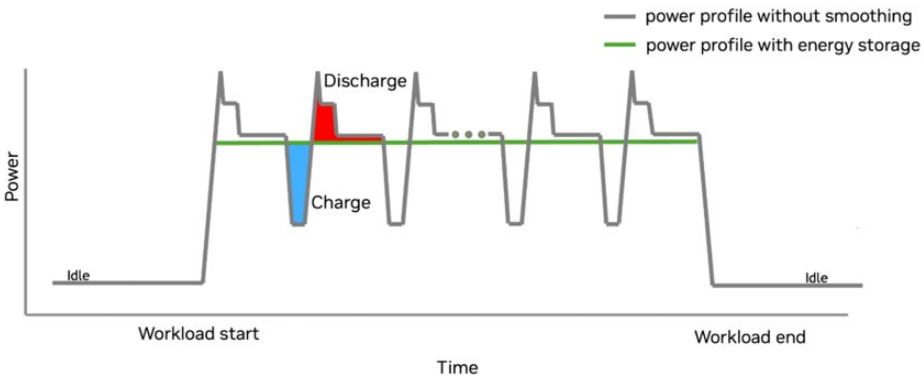
The PSU can use its internal capacitors to cover the initial transient, but capacitor volume is limited; once that stored energy is depleted, the PSU control loop must raise input current, potentially producing current overshoot and transferring the disturbance upstream.

The UPS is located farther from the accelerator and sees the aggregated load of many PSUs. A transient originating near the GPU can therefore occur on microsecond-to-millisecond timescales—including permitted GPU electrical-design-power excursions around 50 ms—before the complete upstream conversion chain can rebalance power.

This is a response time and location mismatch, rather than evidence that UPSs or PSUs are fundamentally incapable of supporting AI. New AI-tolerant UPS platforms are being designed for faster and larger load steps, but many legacy systems may still experience voltage excursions, nuisance alarms, lower partial-load efficiency or unwanted bypass transfers under steep synchronized loads.

To complement the conventional power delivery architecture, more AI server clusters are adopting BBUs or CBUs to shave peak loads and mitigate the above-mentioned issues.

Exhibit 36: Concept of peak shaving for AI server power loads



Source: Nvidia

Battery backup units seeing increasing importance

What's a BBU?

A BBU is an integrated battery, power-conversion and control system that supplies DC power to server loads when the normal power source is interrupted or temporarily insufficient. In an OCP-style rack, the BBU modules are housed in a dedicated shelf located near the PSU power shelf and connect directly to the common DC busbar. Under normal conditions, the PSUs power the servers and maintain the BBU's charge; when the bus

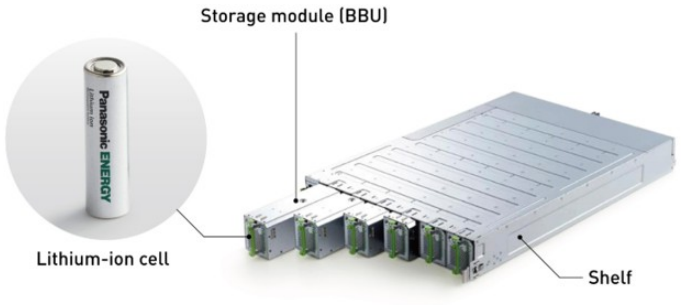
voltage falls below a programmed threshold, the BBU's bidirectional converter changes from charging or standby into discharge mode and supports the rack. Analog Devices' ORV3 reference design detects a bus voltage below 48.5V for more than 2ms and is required to ramp to full support within another 2ms, while maintaining the bus above the specified minimum voltage.

Key components within a BBU

- **Battery-cell pack:** The cells store the energy used during discharge. Lithium-ion cylindrical cells are commonly arranged in series and parallel to obtain the required voltage, power and runtime; the ORV3 reference module uses an interchangeable 11-series, 6-parallel battery pack. The cell must provide not only sufficient energy but also high discharge power, low internal resistance and predictable performance over its qualified life.
- **Bidirectional DC/DC converter:** The converter controls energy flow between the battery pack and the rack DC bus. It steps voltage in the appropriate direction during charging and discharging and regulates the output so that the battery's changing voltage does not destabilize the server bus. Multiphase designs divide the large current across several parallel power stages; TI's 12 KW design uses six 2 KW phases and reports peak efficiency above 99%, including above 99.5% when battery and bus voltages are close.
- **Battery management system:** The BMS measures individual cell voltages, current and temperature, balances cells and estimates state of charge and state of health. It also protects against overcharge, excessive discharge, overheating and short circuit. Accurate state-of-health information is important because the operator must know whether an apparently charged BBU can still deliver its required rack power and runtime after years of standby operation and periodic discharge events.
- **Power-path and protection circuitry:** Fuses, current sensors, disconnect switches, protection MOSFETs and hot-swap circuits isolate faults and prevent uncontrolled current flow. Typical protections include overvoltage, undervoltage, overcurrent and overtemperature shutdown. Hot-swap capability allows a failed or end-of-life module to be replaced without intentionally shutting down the entire rack, while active current sharing ensures that parallel BBU modules carry an appropriate portion of the load.
- **Control, monitoring and communications:** A module controller manages operating modes, converter control, fault handling, diagnostics and communication with the BMS and rack controller. Interfaces such as PMBus, Modbus, CAN, RS-485 or Ethernet can expose battery voltage, current, temperature, state of charge, state of health, fan speed and fault status to data-center management systems. Analog Devices' reference platform uses separate controllers for battery monitoring and overall BBU logic, communications and housekeeping.
- **Thermal-management system:** Fans, temperature sensors, airflow paths and mechanical spacing around cells remove heat during high-rate charging and discharging. Thermal management is both a performance and a safety requirement: excessive temperature accelerates battery ageing and can restrict available discharge power. Analog Devices' ORV3 design therefore incorporates fan control, airflow simulation and cell-to-cell spacing, while Murata's commercial 3 KW BBU includes internal forced-air cooling and overtemperature protection.

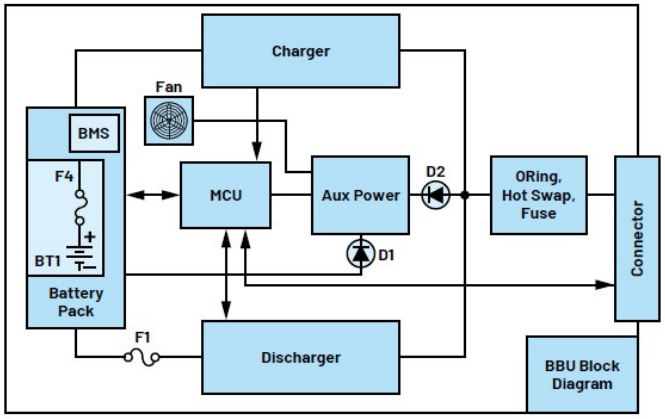
- **Shelf, backplane and mechanical integration:** The shelf distributes DC power and communications across several modules and provides retention, service access and cooling. Modularity allows power and runtime to be scaled by adding units and enables redundancy such as the ORV3 5+1 configuration. Murata specifies a 2U, hot-swappable 3 KW module, while Eaton's 19-inch BBU shelf accepts six 2.75 kW batteries and scales runtime according to the application requirement

Exhibit 37: BBU



Source: Panasonic

Exhibit 38: BBU diagram



Source: ADI

Key functions of BBUs

Backup power and outage ride-through

The BBU's fundamental function is to maintain rack operation during a brief loss of upstream power. The ride-through interval gives the data center time to restore the primary source, transfer to another source, preserve critical data, migrate workloads or perform an orderly shutdown. Rather than attempting long-duration operation, rack BBUs are generally optimized for high power over a relatively short period; the ORV3 example specifies 3KW per module for four minutes, and Murata guarantees a 240-second hold-up period at full-rated load under stated age and temperature conditions.

For AI systems, this protection is particularly valuable because a rack interruption can affect a synchronized workload extending well beyond the failed server. Local ride-through prevents a momentary upstream disturbance from immediately removing GPU, CPU, networking and storage power from the rack. Infineon consequently describes the server BBU as an integrated backup supply intended to prevent data loss and maintain AI workloads during outages or grid failures.

Peak shaving and load smoothing

A BBU can be operated as an active energy buffer. as it charges during lower-demand periods and discharges when server consumption temporarily exceeds a defined rack or PSU limit. This allows a relatively stable upstream power source to support a more volatile downstream AI workload. The economic benefit is that PSU, UPS and electrical capacity can be designed closer to sustained demand rather than every short theoretical peak, although the achievable benefit depends on the frequency, duration and predictability of those peaks.

The important limitation is battery cycling. A BBU designed primarily for emergency standby may not be optimized for continuous, repetitive peak shaving, so frequent cycling affects heat generation, state of charge, usable life and replacement schedules. Very short and highly repetitive transients may therefore be better supported by a CBU or hybrid battery-capacitor system, leaving the battery to cover longer events. Renesas correspondingly distinguishes distributed BBUs from hybrid systems that combine batteries with capacitors for fast transient response and longer-duration backup.

Power stabilization, redundancy and fault isolation

A rack BBU adds another independent source to the local power path. If a power shelf, upstream feed or AC source is interrupted, the BBU can sustain the rack while the fault is isolated or another source assumes the load. A modular shelf further improves resilience because one BBU failure need not remove the entire backup function; the remaining modules can continue operating within the available redundancy and power limits.

Distributed deployment also narrows the fault domain. A defective rack BBU affects a much smaller set of compute equipment than a failure within a centralized backup system serving a large room or data hall. The tradeoff is a much larger population of batteries, converters, controllers and fans that must be monitored, tested and eventually replaced. Digital state-of-health monitoring, fault reporting and hot-swappable construction are therefore central to the operating model rather than optional features.

BBUs vs. UPSs

While some of the functions that BBUs offer look similar to what traditional UPSs can do, we think BBUs and UPSs should be viewed as complementary rather than substitutive technologies, as they address different challenges within the datacenter power architecture.

A UPS is designed to provide facility- or row-level protection against utility outages, voltage sags, surges, and other power-quality disturbances, ensuring continuous AC power delivery to a broad range of IT equipment. In contrast, a BBU operates much closer to the AI workload, supplying DC power directly at the rack level and responding to localized power events that occur faster than the upstream power infrastructure can efficiently manage.

As AI racks become denser and more power intensive, the UPS continues to serve as the first line of defense against external power disruptions, while the BBU acts as a second layer of protection by stabilizing the rack DC bus, supporting transient load spikes, and providing short-duration ride-through capability. Together, they create a hierarchical power protection architecture in which the UPS ensures overall system availability and power quality, while the BBU enhances rack-level resilience and power-delivery performance. Rather than replacing the UPS, BBUs help reduce the burden on centralized backup systems, improve power utilization efficiency, and enable the reliable operation of next generation AI infrastructure with increasingly dynamic power profiles

Exhibit 39: Comparison of BBUs and UPSs

Dimension	BBU	UPS
Location	Inside the server rack, in a BBU shelf, or in an adjacent rack/sidecar close to the compute	Typically deployed at equipment room, row or facility level and protects multiple racks or other critical loads
Power path	Usually DC-coupled to the rack bus through a bidirectional DC/DC converter	Takes AC input and delivers AC output; the server PSU subsequently converts AC again for the server
Primary objective	Short rack-local ride-through, DC-bus support, modular redundancy and—when designed for it—transient or peak-load assistance	Broad power conditioning and uninterrupted AC supply during utility sags, surges, frequency disturbances and outages
Response	Monitors the local bus and can inject power within a few milliseconds; the cited ORV3 reference requires full support within 2ms after a qualifying 2ms event	An online double-conversion UPS already powers the load through its inverter and therefore has zero transfer time between utility and battery operation
Runtime	Generally optimized for short-duration, high-power support; OCP's reference example is four minutes at full load	Runtime varies widely with battery-bank sizing and system design; its broader function is to maintain protected AC loads until another source or operating response becomes available
Scalability	Added rack-by-rack or module-by-module; power and runtime can be matched to each compute deployment	Scaled centrally in larger KW blocks and requires capacity planning for the aggregate protected load
Fault domain	A module or shelf fault is normally localized to one rack or a limited group of racks	A centralized system protects a much broader load domain, so its redundancy and maintenance design are correspondingly critical

Capacitor backup unit (CBU) another complementary power device

What's a CBU?

A CBU is an integrated energy storage subsystem positioned close to the AI load, typically in a dedicated rack shelf, capacitor tray or adjacent power sidecar, and connected to the server rack's DC power path. Its principal storage medium may be an electric double-layer capacitor (EDLC or supercapacitor), lithium-ion capacitor (LIC), or a bank of high-capacitance electrolytic capacitors, depending on the required response time, energy duration, footprint and cost. Dedicated CBU products increasingly use EDLCs or LICs because their low internal resistance supports rapid, repetitive charge and discharge.

The CBU sits electrically alongside the PSU. Under steady-state conditions, the PSU supplies the AI rack and maintains the CBU at its target state of charge. When GPU demand temporarily exceeds the desired PSU output, the CBU discharges through a controlled power converter into the DC bus; when GPU demand falls, the converter reverses direction and recharges the capacitors at a controlled rate. This prevents the full GPU load step from passing through the PSU and upstream equipment. Infineon notes that a separate CBU must be compatible with, and potentially communicate with, the PSU shelves to coordinate rack power.

An alternative to deploying a standalone CBU shelf is to integrate the energy-storage capacitors directly into the power shelf, effectively combining power conversion and transient-energy buffering within the same subsystem. NVIDIA's GB300 NVL72 architecture is a good example: its enhanced power shelves incorporate a substantial capacitor bank alongside the PSU modules, with NVIDIA allocating approximately 65 joules of stored energy per GPU.

NVIDIA reported that this approach reduced peak upstream power demand by roughly 30% in a measured Megatron LLM workload. Compared with a separate CBU, integrating capacitors into the power shelf can save valuable rack space, shorten the electrical path between the energy buffer and the load, and simplify coordination between the PSU and

energy-storage system, since charging, discharging, and PSU output can be managed as one integrated power architecture. The trade-off is that capacitor capacity becomes more tightly coupled to the power-shelf design, potentially reducing flexibility in independently scaling or servicing the energy-storage system. Nevertheless, as AI racks become increasingly power dense, integrating transient-energy storage directly into the power shelf could become an attractive alternative to standalone CBUs, particularly where rack space and fast transient response are key design priorities.

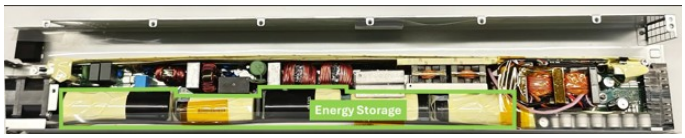
Exhibit 41: GB300 power shelf with integrated capacitors



Source: Nvidia

Key components within a CBU

- **Capacitor bank:** The storage section contains many capacitor cells arranged in series to reach the required voltage and in parallel to provide the required power and energy. Individual EDLC cells commonly operate at only a few volts, so high-voltage systems require long series strings; Abracon cites approximately 2.7 V as a typical supercapacitor cell rating, while TI's NVIDIA-oriented reference architecture demonstrates an 800 V CBU using EDLC cells. LICs can provide more stored energy than conventional EDLCs, while EDLCs generally emphasize lower resistance, high peak power and very high cycling endurance. Delta, for example, offers a power-capacitance shelf using fast-charge/discharge LICs, rated to provide 15 seconds of hold-up at 20 KW.
- **Cell-balancing system:** Because cell capacitance, leakage current and internal resistance vary across a series string, the voltage does not divide perfectly equally. A balancing circuit prevents an individual cell from exceeding its rated voltage during charging or being reverse-biased during deep discharge. Passive balancing uses resistors to bleed excess charge, while active approaches use MOSFETs, amplifiers or switched converters to redistribute energy more efficiently; the design tradeoff is between cost, balancing speed, component count and standby loss.
- **Bidirectional DC/DC converter:** This is the active interface between the capacitor bank and the rack DC bus. During a GPU power spike, it converts the capacitor's changing voltage into a regulated bus contribution; during lower demand, it reverses power flow to recharge the bank. The converter also allows more of the capacitors' stored energy to be used than would be possible with a direct connection, because capacitor voltage declines materially during discharge.

Infineon specifically identifies a capacitor bank plus bidirectional converter as the main CBU structure, while Skeleton Technologies notes that converter-based integration provides greater energy utilization and more precise power-flow control than a direct bus connection.

- **Controller and management software:** The controller determines when the CBU should charge, remain idle or discharge, based on bus voltage, PSU output, rack power limits and capacitor state. It may also calculate state of health, manage balancing, regulate recharge current and coordinate multiple CBU modules.
- **Protection and switching:** A high-power capacitor bank can release very large fault current, so fuses, contactors, pre-charge circuits and overvoltage, overcurrent and overtemperature protection remain essential. Pre-charge limits inrush current when the CBU is connected to the DC bus, while contactors or solid-state switches isolate the bank during a fault or service event. Skeleton's reference system integrates switchgear, fuse-fault detection, pre-charge/discharge contactors and protection against high-current and overheating events; industry discussions also highlight the need for faster DC fault isolation as CBU voltage rises.
- **Monitoring and communications:** Voltage, current, temperature, equivalent series resistance and state-of-health measurements allow operators to identify degradation before the CBU can no longer meet its specified peak-power requirement. Panasonic emphasizes voltage, temperature and ESR monitoring for predictive maintenance, while Skeleton provides single-cell voltage sensing, multiple temperature sensors and communication bus to its master controller.
- **Thermal and mechanical system:** Although supercapacitors are efficient, high repetitive current produces resistive heating, particularly in cells, busbars, converters and connectors. The shelf therefore requires designed airflow, temperature sensing and, at higher power levels, potentially liquid cooling. Skeleton's cabinet uses controlled fan cooling and also offers liquid-cooled configurations, while the Open Compute Project presentation from Panasonic identifies lower-resistance capacitors and liquid cooling as development priorities for future higher-output CBUs

Main functions of CBU

Transient power stabilization

One of the most fundamental roles of a CBU is to stabilize the rack DC power bus when GPU power consumption changes very rapidly. AI workloads frequently alternate between compute-intensive phases and lower-power communication, synchronization, or idle phases. Because many GPUs operate in parallel, these transitions can create very large changes in rack power within milliseconds.

When GPU demand suddenly increases, the PSU cannot instantaneously increase its output. The CBU therefore discharges stored energy into the DC bus during this short response gap, helping prevent voltage drop and excessive current excursions. Conversely, when GPU demand suddenly falls, the CBU can absorb excess energy while the PSU reduces its output, helping limit voltage overshoot.

The key objective here is power quality and system stability, rather than reducing the overall power capacity required by the rack. In other words, the CBU acts as a fast

electrical shock absorber between the highly dynamic GPU load and the slower PSU. This becomes increasingly important as AI racks move above 100 KW and synchronized GPU workloads create larger absolute power swings.

Peak shaving

Another major function is peak shaving, whose objective is to limit the maximum power that the PSU and upstream infrastructure need to supply.

The benefit is potentially significant because the PSU, connectors, protection devices, and portions of the upstream power infrastructure no longer need to be oversized solely for short-duration GPU peaks. It can also allow PSUs to operate closer to their optimal loading range, improving utilization and potentially efficiency.

Short duration ride-through

The third function is ride-through, where the CBU temporarily powers the rack when the normal power source is interrupted altogether. This is fundamentally different from the first two functions because the issue is no longer a mismatch between GPU demand and PSU response—the upstream power source itself has temporarily disappeared.

A sufficiently sized CBU can maintain the DC bus during events such as a brief AC interruption, PSU switchover, source-transfer event, or temporary power-shelf failure. Depending on the amount and type of capacitance installed, this support can range from milliseconds to several seconds. For example, some LIC-based capacitance shelves are designed to provide multi-second hold-up at high rack power.

However, ride-through is generally a secondary function for a CBU. Capacitors have high power density but relatively low energy density, meaning they can deliver a large amount of power very quickly but cannot economically sustain that power for long periods. As the required backup duration increases from seconds toward minutes, a battery-based BBU generally becomes more suitable.

Exhibit 42: Capacitors help smooth power delivery

	Ipk-max	Ipk-min	Max/Min Ratio
NVIDIA GB200 NVL72	15.9A	8.3A	91.57%
NVIDIA GB300 NVL72	13.3A	8.6A	54.65%
NVIDIA Vera Rubin NVL72	**12.8A**	**10.3A**	**24.27%**

Source: Lite On

CBUs vs. BBUs

The two technologies should consequently be regarded as complementary rather than directly substitutive. A CBU handles the high-power, short-duration and high-cycle portion of the load profile, while a BBU supplies the larger amount of energy required when the upstream source remains unavailable. Some describe BBUs and CBUs as coexisting in the same power sidecar, and hybrid architectures can allocate fast transients to capacitors while preserving battery charge and cycle life for longer outages.

The CBU's major advantages are rapid bidirectional response, long cycle life, high efficiency and the ability to absorb repeated GPU peaks without the same electrochemical wear mechanism as a conventional battery. It can also recharge quickly between workload cycles and may require less routine replacement. However, the CBU has materially lower energy density, its voltage falls continuously during discharge, and large banks require balancing, high-current protection, cooling and valuable rack or sidecar space.

Exhibit 43: Comparison of CBUs and BBUs

Dimension	CBU	BBU
Primary storage medium	EDLC supercapacitors, LICs or high-capacitance	Typically lithium-ion battery cells managed by a BMS
Primary strength	High power, fast charge/discharge and frequent	Higher stored energy and longer sustained
Main function	Transient smoothing, peak shaving, voltage	Outage backup, source-transfer bridging and orderly workload
Response profile	Well suited to millisecond-class load support and	Fast switchover, but generally optimized for sustained support rather
Typical duration	Milliseconds to seconds; selected systems can extend toward tens of seconds or more	Commonly tens of seconds to several minutes, depending on battery and rack design
Power versus energy density	Higher power capability but lower energy storage per unit volume than a battery	Higher energy density, making it more economical for longer events
Cycle life	Eaton specifies more than one million cycles and up to 20 years for certain supercapacitor modules	Battery life is more sensitive to depth of discharge, temperature and repeated cycling; BMS supervision is therefore essential.
State management	Requires cell balancing, voltage/temperature monitoring and state-of-health tracking, but does not use a conventional battery fuel	Requires BMS functions including charge control, state of charge, state of health and cell protection
Best-fit use case	Repetitive AI power spikes, inrush events, PSU load leveling and bus stabilization	Power continuity through outages, brownouts or generator/source-transfer intervals

HVDC Emerging, with SST in the Pipeline

HVDC coming along with the increasing power consumption of AI clusters

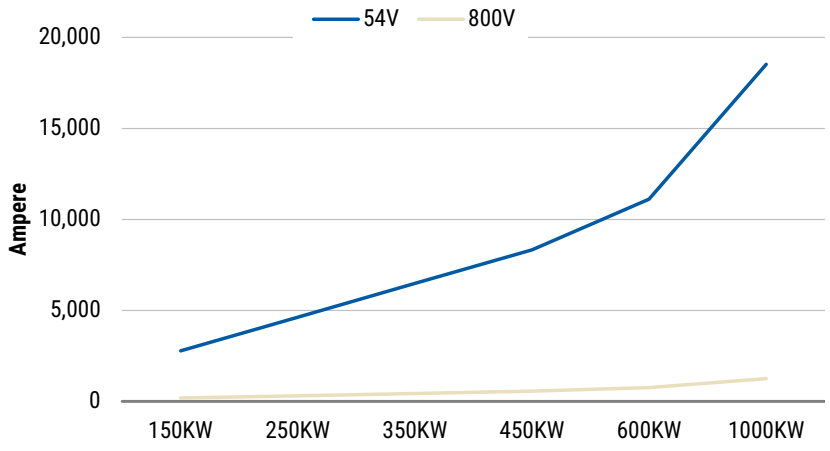
Why do we need HVDC?

Low voltage turns higher rack power into an extreme-current problem

The fundamental relationship is that at a given rack load, increasing the bulk-distribution voltage from 54 V to 800 V reduces current by approximately 14.8 times. A balanced ±400 V architecture also presents 800 V between its +400 V and –400 V conductors, so its bulk-transfer current is broadly equivalent to a 0–800 V architecture.

This current differential has an outsized mechanical consequence. For the same conductor resistance, I^2R loss at 54V would theoretically be approximately 219 times that at 800 V, though real systems avoid this level of loss by adding copper, parallel conductors and cooling. The result is not a 219-fold difference in actual operating loss, but a trade-off in which low-voltage designs consume increasing amounts of busbar cross-section, connector area, rack volume and cooling capacity to remain within voltage-drop and temperature limits.

Exhibit 44: Transmission current for different power scales: 54V vs 800V



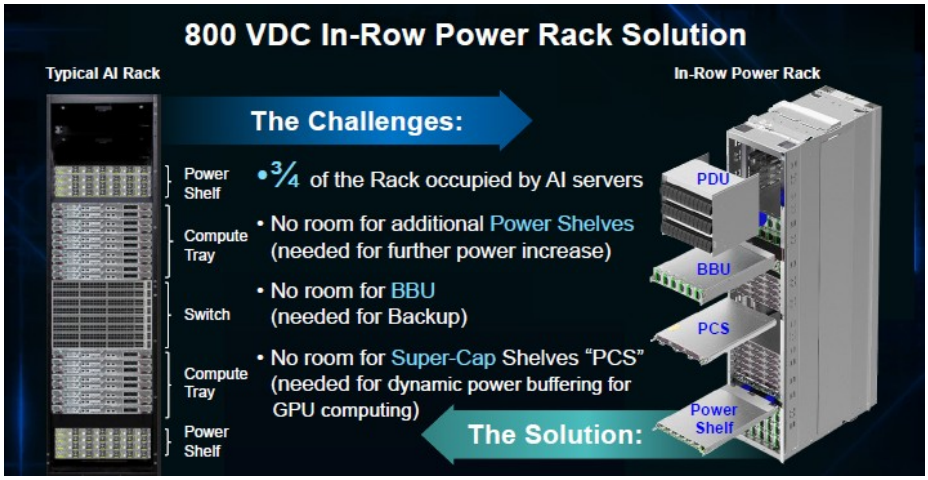
Source: Delta

Copper, connectors and thermal management become system constraints

At several thousand amperes, distribution cannot rely on a single ordinary conductor or connector. Designers must use broad laminated busbars, multiple parallel contacts, tightly controlled joint resistance and temperature monitoring. A small increase in contact resistance produces disproportionately high heat at these currents, raising the risk of hot spots, connector ageing and nuisance protection events. OCP's 100KW HVDC-to-LVDC shelf illustrates where the current problem moves: only two 62.5 A HVDC inputs are required on the ±400V side, while the 49–50V output approaches 2,000A and therefore uses a substantial bolted output connection with dedicated thermistors.

The same issue appears in power-shelf packaging. Delta notes that a typical AI rack may already allocate roughly three-quarters of its volume to servers, leaving insufficient room for additional power shelves, BBUs or supercapacitor shelves as power rises. Moving AC/DC conversion, protection and storage into an adjacent power rack therefore releases compute space and separates the thermal design of power electronics from that of GPUs. Microsoft's Mt Diablo rationale similarly states that disaggregated power can enable up to 35% more accelerators in the IT rack and allows power shelf count to be sized independently for each workload configuration

Exhibit 45: Not enough room for power devices on the traditional AI server rack



Source: Delta

HVDC enables denser, fewer and more efficient power stages

As AI rack power scales from today's GB200/GB300 systems to Vera Rubin and future multi-hundred-kilowatt racks, power distribution efficiency becomes increasingly important. Our checks indicate that a conventional 480VAC architecture delivers an end-to-end electrical efficiency of roughly 93%, while an 800VDC architecture improves efficiency to about 95% by eliminating one power conversion stage and simplifying the power path from grid to rack.

The higher-voltage 800VDC distribution also reduces current levels for the same power load, lowering resistive (I^2R) losses in cables and distribution equipment and enabling more efficient delivery to increasingly power-dense AI racks.

While a 2ppts of efficiency improvement may appear modest, the savings become substantial at hyperscale AI data center deployments. Delta's example shows that for a 100MW IT load, improving facility efficiency from 93% to 95% reduces annual energy consumption by approximately 19,800MWh, translating into roughly US$1.6 million of annual electricity cost savings assuming a power price of US$0.08/kWh. At a 1GW AI campus, the savings scale to nearly US$16 million per year, and at emerging multi-gigawatt AI factory deployments, the annual benefit can exceed US$100 million. Consequently, the transition from conventional AC distribution and 54VDC rack power architectures toward 800VDC distribution is not only a technical necessity for supporting future 500kW-to-1MW AI racks, but also a compelling economic proposition that lowers operating expenses and improves total cost of ownership through reduced energy losses and simplified electrical infrastructure.

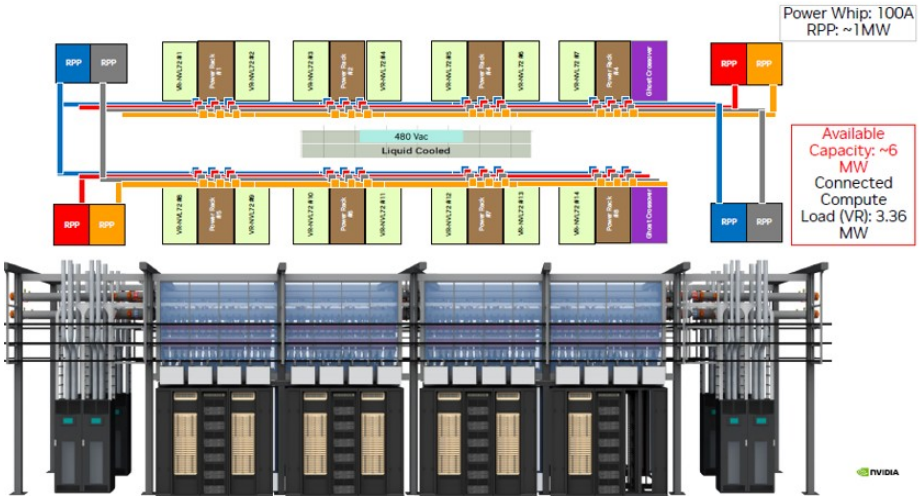
What's the deployment roadmap for HVDC?

The deployment roadmap for 800VDC is best understood as a multi-stage evolution rather than a single-step transition. Both Nvidia and major hyperscalers recognize that existing 480VAC infrastructure cannot efficiently support the rapid increase in rack power. As rack densities increase, conventional power whips, busbars, connectors, and PSU architectures increasingly become bottlenecks, driving the need for higher voltage distribution

The first phase of deployment focuses on introducing 800VDC power racks within existing AC-based data centers. In this architecture, the facility remains largely unchanged, but a dedicated power rack converts 415-480VAC into 800VDC before distributing power locally to AI racks. This approach minimizes disruption to existing infrastructure while allowing operators to deploy Vera Rubin-class systems that exceed the practical limits of traditional power shelves. Nvidia refers to this as the row-level power rack architecture, which serves as the industry's bridge solution between legacy AC facilities and future native DC environments.

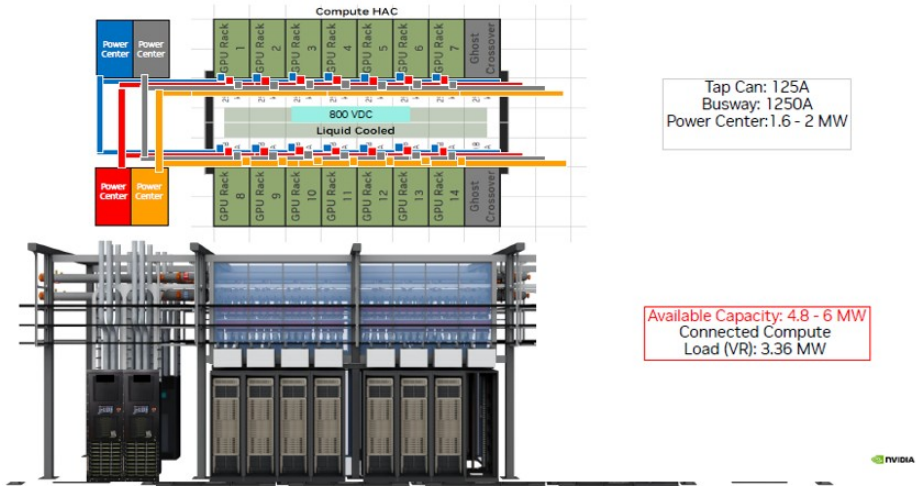
Exhibit 48: Phase I - 800VDC power rack



Source: Nvidia

The second phase expands 800VDC beyond individual rows into data hall-level power centers. Instead of deploying a dedicated power rack for every few compute cabinets, centralized rectifier or power-center systems distribute 800VDC through DC busways across an entire hall. Nvidia's roadmap identifies 1.6-2MW power centers and 1250A DC busway architectures as the next step, improving power density while reducing equipment duplication. This stage also aligns well with the deployment strategies being discussed by hyperscalers and the OCP community because it preserves existing medium-voltage and low-voltage infrastructure while moving a significant portion of distribution into DC

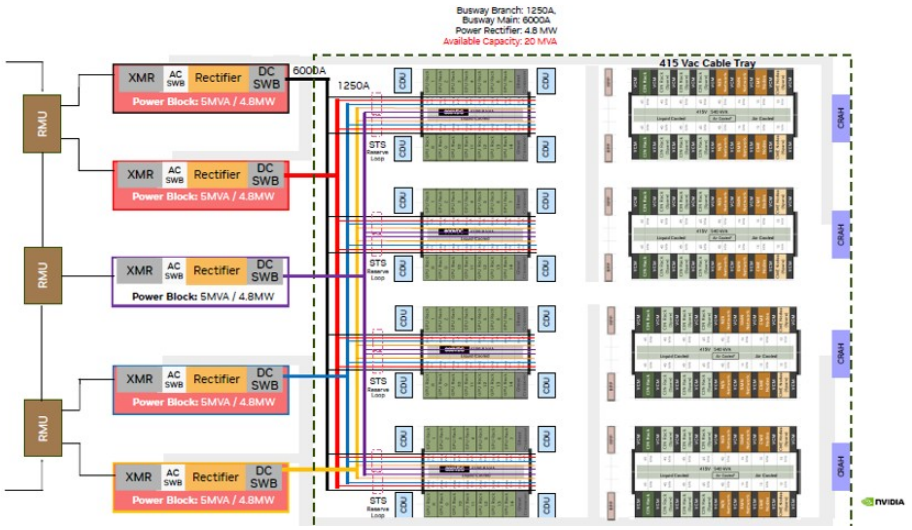
Exhibit 49: Phase II – 800VDC power center



Source: Nvidia

The third phase is the transition toward facility-wide 800VDC distribution, where AC is converted to DC near the utility entrance or medium-voltage substation and distributed throughout the data center via high-capacity DC switchboards and busways. Nvidia describes this as the DC power block architecture, utilizing approximately 4.8MW power blocks, 6000A DC busways, and integrated redundancy schemes. At this stage, the architecture begins to resemble an "AI factory," where power distribution is simplified, energy storage can be integrated directly onto the DC bus, and multiple megawatts of compute capacity can be deployed as modular building blocks

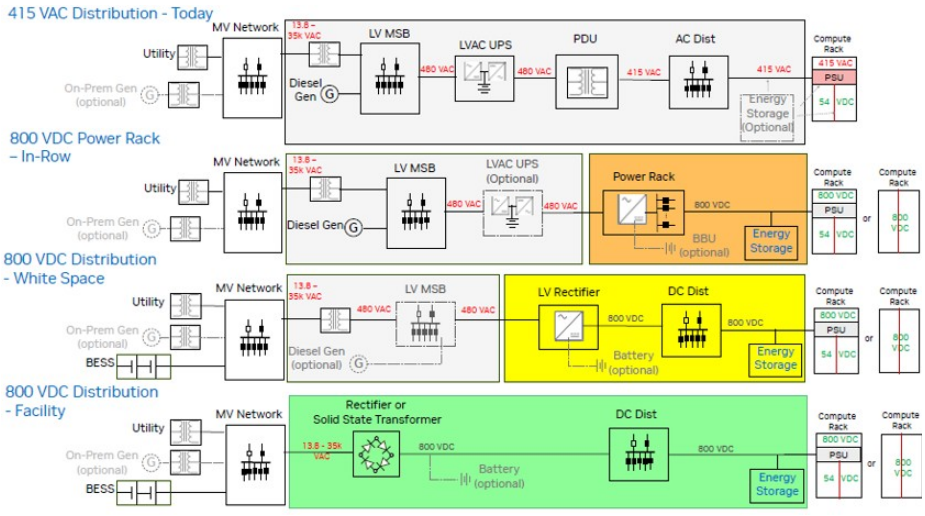
Exhibit 50: Phase III – power block



Source: Nvidia

The final stage is the emergence of native 800VDC compute racks, which Nvidia identifies as the long-term destination. Today, even in 800VDC deployments, power is generally stepped down to 54V before entering the servers. Future systems, however, are expected to accept 800VDC directly within the rack and potentially at the server level, eliminating another conversion stage and further reducing power losses. Nvidia's public roadmap shows a progression from current 54V architectures, to 800VDC-fed PSUs, and ultimately to 1MW-class native 800VDC racks capable of supporting next-generation AI accelerators

Exhibit 51: 800VDC native server racks



Source: Nvidia

In sum, deployment is likely to occur gradually because the ecosystem remains under development. NVIDIA notes that several enabling technologies—including DC protection devices, busways, connectors, grounding standards, arc-flash modeling, and solid-state transformers— are still undergoing certification and standardization. The roadmap presented by NVIDIA suggests a phased commercialization timeline, with 800VDC power racks reaching deployment readiness in 2026, hall-level power centers in 2027, and facility-scale DC power blocks becoming deployment-ready around 2028. Industry

collaboration among NVIDIA, Microsoft, Google, and OCP participants is focused on ensuring interoperability and regulatory acceptance before broader hyperscale adoption.

Exhibit 52: HVDC deployment roadmap

Focus Area	Status	Impact
Grounding & Protection	Architecture converging with UL and OEMs	Foundation for safe and reliable deployment
Equipment Certification	Certification pathways established and progressing	Accelerates deployment readiness
Protection Devices	MCCB available; SSCB ecosystem maturing	Enables fast fault isolation and higher availability
Busway, Connector & Whips	Standardized 125A architecture under development	Supports scalable rack deployment
High-Density Power Conversion	Rectifiers available; SST roadmap advancing	Enables future 800 VDC Compute Product

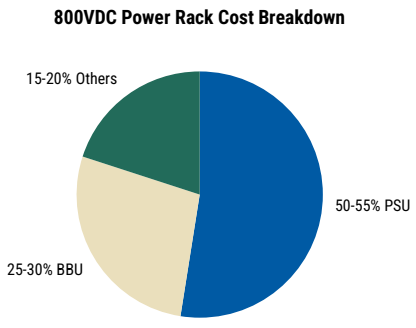
800VDC represents 4-5x dollar content vs. in-rack power supply architecture

The 800VDC power rack BOM is primarily driven by the PSU, which accounts for 50–55% of the total cost, followed by the BBU at 25–30%, with other components comprising the remaining 15–20%. This cost structure reflects the broader functionality integrated into an HVDC power rack, combining power conversion, backup power and supporting components within a centralized architecture.

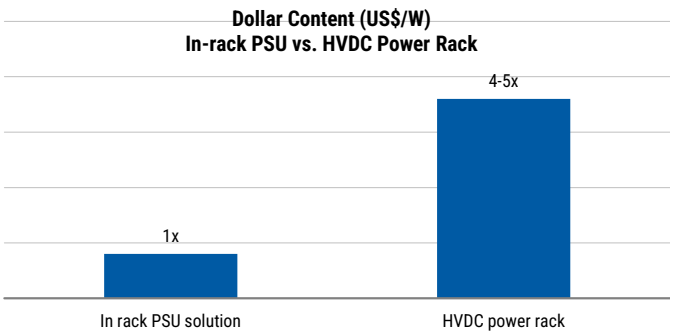
For power supply players, one of the most implications is that an HVDC power rack carries around 4–5x higher dollar content per watt compared with a conventional in-rack PSU solution, since the former integrates more components into a robust system and power supply players usually ship the entire rack instead of just the components.

Exhibit 53: BOM cost breakdown for an 800VDC power rack



Source: Morgan Stanley Research

Exhibit 54: Higher dollar content for HVDC power racks



Source: Morgan Stanley Research

800VDC vs. ±400VDC?

The debate between ±400VDC and 800VDC centers on balancing near-term practicality against long-term scalability. While both architectures deliver an identical 800V differential voltage and therefore achieve similar reductions in current, copper loss, and cable size versus traditional 54V rack power systems, they differ significantly in implementation.

Under a ±400VDC architecture, each conductor operates at only 400V relative to ground, resulting in less stringent insulation, creepage, clearance, and protection requirements. This makes the architecture easier to deploy, maintain, and certify, which explains why many hyperscalers and OCP members view ±400VDC as an attractive migration path toward high-density AI racks.

By contrast, NVIDIA and several power infrastructure vendors are increasingly advocating for a single-bus 800VDC architecture because it simplifies overall power distribution, reduces conversion stages, and is better suited for future 500kW to 1MW rack deployments.

We believe that ±400VDC appears well positioned as a near-term bridge architecture due to its lower deployment risk and more mature ecosystem, whereas 800VDC is increasingly viewed as the long-term end-state architecture for AI factories as rack power scales toward the megawatt era.

Exhibit 55: Comparison of 800VDC and ±400VDC

Metric	±400VDC	800VDC
Voltage to ground	400V relative to ground	800V relative to ground
Voltage differential	800V	800V
Power distribution efficiency	High	Slightly higher
Scalability	Good	Excellent
Insulation requirements	Lower	Higher
Maintenance safety	Better	More challenging
System architecture simplicity	Dual-rail system	Single-bus system
Grounding Complexity	More complicated	Simpler
Electrical footprint	Small	Smaller
Ability to reduce conversion stages	Moderate	Highest
Long-distance distribution capability	Excellent	Excellent
Maturity of ecosystem	Better today	Early but rapidly developing
Industry players	OCP, hyperscalers	Nvidia
Long term industry direction	Transitional architecture	Likely end-state architecture

Source: Morgan Stanley Research

From a component supplier perspective, the transition toward HVDC is far more important than which architecture ultimately wins, as most hardware content increases under either scenario. PSU vendors, BBU suppliers, busbar manufacturers, connector providers, power-whip suppliers, magnetics vendors, and rack-level DC-DC converter manufacturers are largely architecture-agnostic, since both ±400VDC and 800VDC require a similar shift toward high-voltage power distribution, centralized power shelves, and rack-level conversion.

Our understanding is that the primary exception is the power semiconductor industry, where the choice of architecture could materially influence device content and technology adoption. A ±400VDC system can often be supported using existing 650V-900V MOSFET and SiC platforms, benefiting suppliers with exposure to lower-voltage power devices. By contrast, 800VDC architectures increasingly require 1200V-class SiC MOSFETs, higher-

voltage gate drivers, hot-swap controllers, isolation components, and advanced protection circuitry, driving greater semiconductor content per watt and raising technology barriers.

Solid state transformer potentially being the holy grail in AI datacenter power delivery

What is a solid-state transformer ?

A datacenter solid state transformer (SST) integrates power electronics to replace or augment traditional line-frequency transformers, and it's typically built around three major functional stages. The first is the medium-voltage AC-to-DC rectifier stage, which uses high-voltage semiconductor switches—often silicon carbide (SiC) or gallium nitride (GaN) devices due to their superior switching speed and thermal performance—to convert incoming grid-level medium voltage AC into a regulated DC bus. The second is the isolated DC-DC conversion stage, usually implemented as a dual active bridge (DAB) or LLC resonant converter, which provides galvanic isolation through a high-frequency transformer (operating in the kHz to tens-of-kHz range rather than 50/60 Hz), dramatically shrinking the magnetic core and transformer size compared to conventional units while stepping voltage down toward datacenter distribution levels. The third is the low-voltage DC-AC or DC-DC output stage, which conditions power into the form needed by the facility—either regulated DC for direct DC-bus distribution to IT racks or inverted AC for legacy PDU/UPS infrastructure. Supporting these power stages are the control and sensing subsystems (digital controllers, gate drivers, voltage/current sensors) that manage switching, fault protection, and grid synchronization; thermal management components (heat sinks, cold plates, or liquid cooling loops) to handle the concentrated losses in the semiconductor devices; and increasingly, integrated energy storage interfaces or DC microgrid ports that allow the SST to natively support battery buffering, renewable integration, and finer-grained power quality control than a passive transformer ever could

A Solid-State Transformer (SST) is a power-electronics-based transformer that replaces the traditional 50/60Hz iron-core transformer with a combination of power semiconductors, control electronics, and a medium-frequency transformer. Unlike conventional transformers that perform only voltage conversion, SSTs actively process power through multiple stages, enabling both AC and DC inputs/outputs, bidirectional power flow, voltage regulation, reactive power compensation, and intelligent grid control

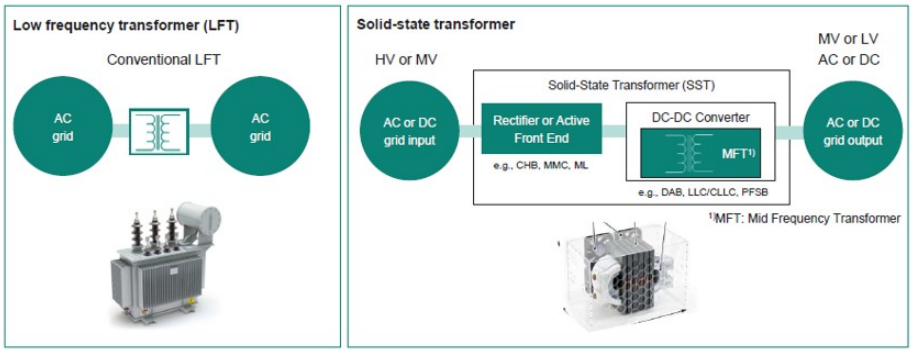
A SST is typically built around three major functional stages:

- The first is the medium-voltage AC-to-DC rectifier stage, which uses high-voltage semiconductor switches—often silicon carbide (SiC) or gallium nitride (GaN) devices due to their superior switching speed and thermal performance—to convert incoming grid-level medium voltage AC into a regulated DC bus.
- The second is the isolated DC-DC conversion stage, usually implemented as a dual active bridge (DAB) or LLC resonant converter, which provides galvanic isolation through a high-frequency transformer (operating in the KHz to tens-of-LHz range rather than 50/60 Hz), dramatically shrinking the magnetic core and transformer size compared to conventional units while stepping voltage down toward datacenter distribution levels.
- The third is the low-voltage DC-AC or DC-DC output stage, which conditions

power into the form needed by the facility—either regulated DC for direct DC-bus distribution to IT racks or inverted AC for legacy PDU/UPS infrastructure.

Supporting these power stages are the control and sensing subsystems (digital controllers, gate drivers, voltage/current sensors) that manage switching, fault protection, and grid synchronization; thermal management components (heat sinks, cold plates, or liquid cooling loops) to handle the concentrated losses in the semiconductor devices; and increasingly, integrated energy storage interfaces or DC microgrid ports that allow the SST to natively support battery buffering, renewable integration, and finer-grained power quality control than a passive transformer ever could.

Exhibit 56: Solid state vs. traditional transformers



Source: Infineon

Why do we need SSTs?

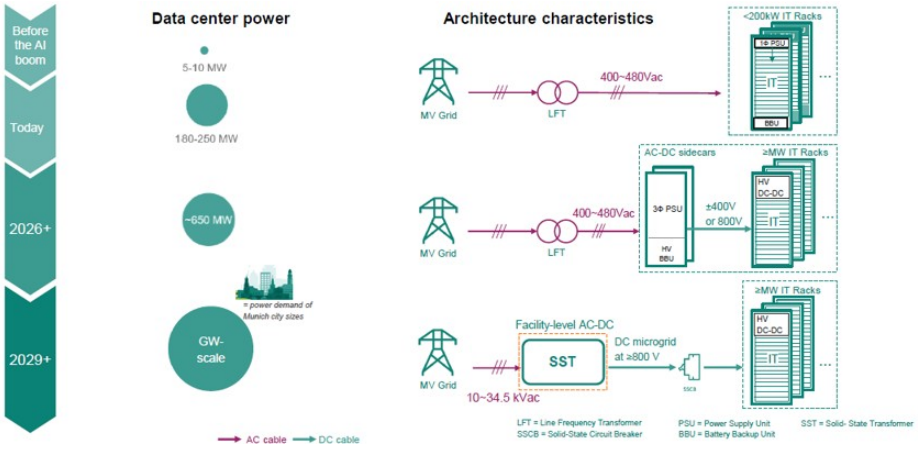
Improving efficiency in an era of gigawatt data centers

One of the strongest drivers for SST adoption is the rapid increase in AI data center power demand, which has progressed from 5-10MW facilities in the pre-AI era to campuses exceeding 650MW today, with gigawatt-scale facilities expected beyond 2029.

Traditional architectures use medium-voltage AC distribution, followed by low-frequency transformers and multiple power conversion stages before power reaches IT racks. SSTs allow facilities to convert 10-34.5KV medium-voltage power directly into ±400V or 800V DC distribution networks. This reduces conversion losses and improves overall grid-to-chip efficiency.

The efficiency advantage could be at the order of about 2-5ppt vs, the traditional transformer architecture, but at a 1GW AI campus, this magnitude of improvement could translate into roughly 20-50MW of continuous power savings. Over the lifetime of a facility, this can result in substantial reductions in electricity cost and carbon emissions. SSTs are therefore becoming increasingly attractive for hyperscaler operators seeking lower total cost of ownership (TCO).

Exhibit 57: SST enabling more efficient power delivery architecture



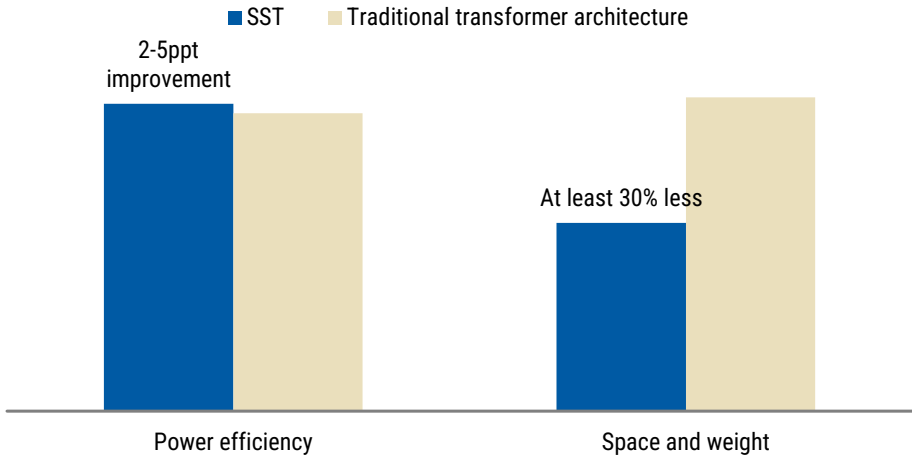
Source: Infineon

Higher power density and smaller footprint

Because SSTs use medium-frequency transformers instead of bulky 50/60Hz transformers, they can achieve significantly higher power density. Infineon indicates that SST systems can reduce both footprint and weight by at least 30% compared with conventional transformer-based installations. They also accelerate site energization and facilitate modular deployment

This becomes particularly valuable in urban data centers, utility substations, EV charging hubs, and energy storage sites where space constraints directly affect project economics.

Exhibit 58: SST offers better power efficiency with at least 30% less space/weight



Source: Infineon, Delta Electronics, Morgan Stanley Research

Supporting distributed energy resources

As renewable energy penetration increases, future grids will require seamless integration of solar generation, battery storage, fuel cells, gas turbines, and other distributed energy resources.

SSTs provide intelligent power routing, bidirectional operation, and dynamic voltage control. This allows them to function as energy hubs that connect renewable generation,

storage, and loads through a common DC infrastructure. Such capabilities are difficult or impossible to achieve using passive transformers alone.

Improved grid intelligence

Unlike conventional transformers, SSTs can actively regulate voltage and frequency, provide reactive power compensation, support grid-forming functionality, and improve overall power quality. These capabilities make SSTs an important enabler for future smart grids, microgrids, and virtual power plants.

What's the deployment status now?

Despite decades of research, SSTs remain at an early commercial deployment stage. While we started to see the SST models being unveiled by relevant suppliers and there start to be some pilot adoption, we believe that the 800VDC power rack/center/block architecture shall be deployed first, and SSTs will take more time, as more fundamental design change in the datacenter and all hardware inside will involved. We believe wider adoption probably won't happen before 2030.

Exhibit 59: SST from Delta

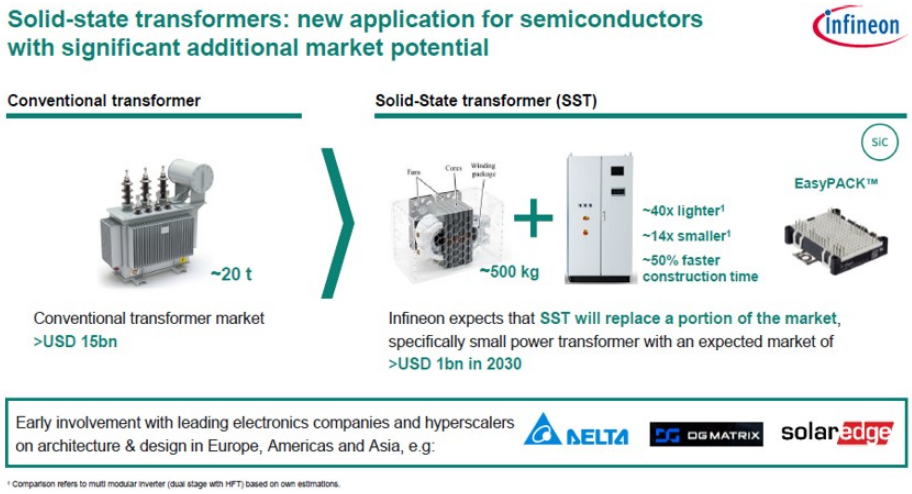
Source: Delta

Exhibit 60: SST from Eaton

Source: Eaton

According to Infineon, SST could represent a >US$1bn market opportunity by 2030, as the technology begins to replace a portion of the >US$15bn conventional transformer market, particularly in smaller-power applications. While SST penetration is expected to remain relatively modest versus the overall transformer market, the opportunity is significant for relevant players in the longer term.

Exhibit 61: SST to see initial adoption in 2030



Source: Infineon

Key hurdles for the wider adoption of SSTs

- **High system cost remains the primary barrier:** Despite their technical advantages, SSTs remain significantly more expensive than conventional transformers. Traditional transformers consist primarily of steel cores, copper windings, insulation materials, and cooling systems, all of which benefit from mature manufacturing processes and economies of scale. In contrast, SSTs require large numbers of high-voltage power semiconductors, gate drivers, digital controllers, sensors, protection systems, and sophisticated thermal management solutions. The extensive use of silicon carbide (SiC) devices, which remain substantially more expensive than conventional silicon-based components, further increases the overall system cost. Although SSTs can deliver efficiency gains, improved controllability, and reduced footprint, the economic benefit is often insufficient to offset the substantial upfront capital expenditure in many utility applications. Consequently, SST deployment is currently limited to applications where efficiency, power density, or system flexibility carry exceptionally high economic value, such as AI data centers, megawatt EV charging stations, and grid-scale battery storage systems.
- **Long term reliability has yet to be proven:** Electric utilities and large infrastructure operators place an extremely high value on reliability because transformers are expected to operate continuously for several decades with minimal maintenance. Conventional transformers routinely achieve service lifetimes exceeding 30 to 40 years and have accumulated more than a century of operating history. SSTs, however, are fundamentally different devices that incorporate thousands of semiconductor junctions, complex control electronics, communication networks, cooling systems, and software algorithms. While each individual technology may be mature, the long-term reliability of the complete SST system remains largely unproven at scale. Operators therefore remain cautious about replacing a passive asset with an active power-electronic system whose failure modes are more complex and less understood. For critical infrastructure such as substations, industrial facilities, or hyperscale data centers, reliability concerns often outweigh potential efficiency improvements.

- **DC protection technology ss still evolving:** One of the most significant technical challenges associated with SST deployment is fault protection, particularly in medium-voltage and high-voltage DC networks. Unlike AC systems, where current naturally crosses zero multiple times each cycle and facilitates fault interruption, DC currents continue flowing continuously during fault conditions. As a result, fault currents can rise extremely quickly, making them more difficult to detect and interrupt safely. Future SST-based power architectures therefore require advanced protection devices such as solid-state circuit breakers (SSCBs), which can react far faster than conventional mechanical breakers. However, DC protection technologies are still evolving, and there is currently no universally accepted approach equivalent to the mature protection schemes available in AC grids. The absence of standardized protection architectures increases deployment risk and remains one of the key obstacles to the wider adoption of SST-based DC distribution systems.
- **System complexity creates engineering, qualification and maintenance challenges:** Compared with traditional transformers, SSTs are considerably more complex systems that require the integration of multiple high-performance subsystems. A complete SST includes medium-voltage power converters, isolated DC/DC stages, high-frequency transformers, semiconductor modules, digital controllers, communication interfaces, and advanced protection mechanisms. As voltage and power levels increase, the number of converter modules and semiconductor devices required can rise significantly. Although the introduction of higher-voltage SiC devices can reduce subsystem count and simplify design, SST architectures remain substantially more complicated than conventional transformers. This complexity increases development costs, certification requirements, maintenance needs, and operational risks, all of which slow adoption among traditionally conservative utility customers.
- **Industry standards and ecosystems are still developing:** The transformer industry benefits from decades of established standards, testing procedures, maintenance practices, and supply chain infrastructure. SSTs, by comparison, represent an emerging technology with limited deployment history and evolving standards. Many utilities remain uncertain regarding qualification procedures, maintenance requirements, spare-parts strategies, and long-term asset management. Furthermore, widespread SST adoption will require parallel development of supporting technologies such as DC protection systems, DC switchgear, energy management software, and medium-voltage DC distribution networks. Until the broader ecosystem matures, many customers will continue to view SSTs as a promising but relatively high-risk alternative to proven transformer technologies.

Fuel Cells for Better Flexibility and Resilience

What are fuel cells?

Fuel cells are electrochemical energy-conversion devices that generate electricity by combining hydrogen and oxygen without combustion. Unlike conventional power generation technologies, which convert fuel into heat and then into electricity through multiple intermediate steps, fuel cells produce electricity directly through an electrochemical reaction, resulting in higher efficiency and significantly lower emissions.

When powered by hydrogen, the primary byproducts are water and heat, making fuel cells one of the cleanest forms of power generation available today.

Fuel cells can be deployed across a wide range of applications, including passenger vehicles, heavy-duty trucks, buses, trains, ships, stationary power generation, backup power systems, and increasingly data centers. As governments and industries pursue decarbonization while seeking reliable and dispatchable power sources.

Major fuel-cell technologies include:

- SOFC (Solid Oxide Fuel Cell): Preferred for stationary power and data centers.
- PEMFC (Proton Exchange Membrane Fuel Cell): Dominant in transportation and backup power.
- MCFC (Molten Carbonate Fuel Cell): Large-scale distributed generation.
- PAFC (Phosphoric Acid Fuel Cell): Commercial combined heat and power.
- DMFC (Direct Methanol Fuel Cell): Portable applications

Exhibit 62: Fuel cell offering - Delta

Source: Delta

Exhibit 63: Fuel cell offering - Bloom Energy

Source: Bloom Energy

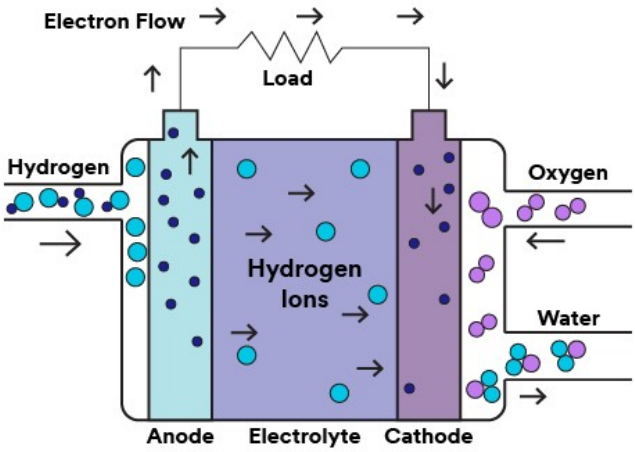
How do fuel cells work?

While there are several fuel-cell architectures, the fundamental operating principle is largely the same: fuel is supplied to the anode, oxygen is supplied to the cathode, and an electrolyte in between allows charged ions to move while forcing electrons to flow through an external circuit. This flow of electrons generates usable electricity, while the

reaction also produces heat and water as byproducts. Unlike conventional generators, which rely on burning fuel to drive a turbine or engine, fuel cells produce electricity directly through electrochemical reactions, allowing them to achieve significantly higher efficiency and lower emissions.

Using solid oxide fuel cell (SOFC) technology as an example, air is supplied to the cathode side of the cell, where oxygen molecules gain electrons and form oxygen ions (O^{2-}). These oxygen ions migrate through a ceramic electrolyte toward the anode side of the cell. At the same time, hydrogen or another hydrogen-rich fuel is supplied to the anode. When the oxygen ions reach the anode, they react with the fuel to produce water, heat, and electrons. The generated electrons cannot pass through the electrolyte and therefore travel through an external electrical circuit before returning to the cathode, creating a continuous flow of electricity. As long as fuel and air continue to be supplied, the fuel cell can generate power continuously.

Exhibit 64: Fuel cell diagram



Source: 3M

What benefits can fuel cells offer?

- **High energy efficiency:** Fuel cells convert the chemical energy of hydrogen directly into electricity through an electrochemical reaction, avoiding the multiple energy-conversion steps associated with combustion-based power generation. This allows fuel cells to achieve electrical efficiencies of over 60%, with some systems exceeding 80% total efficiency when waste heat is recovered through combined heat-and-power configurations, compared with roughly 35-45% for conventional gas-fired power generation. The efficiency advantage translates directly into lower fuel consumption, reduced operating costs, and improved energy utilization over the lifetime of the system.
- **Low carbon emissions:** When powered by hydrogen, fuel cells produce only water and heat as byproducts, generating no direct carbon emissions at the point of use. Even when operating on hydrogen derived from natural gas, fuel cells typically produce significantly lower greenhouse gas emissions than conventional combustion-based power systems. As green hydrogen production scales, fuel cells offer a potential pathway toward near-zero-carbon power generation for transportation, industrial facilities, and distributed energy systems.

- **Grid independence and energy security:** Fuel cells can provide reliable on-site power generation independent of the electrical grid, improving energy security and resilience. This makes them attractive for mission-critical applications such as data centers, hospitals, telecommunications infrastructure, defense installations, and industrial facilities that require uninterrupted power. In regions facing grid congestion or reliability concerns, fuel cells can also serve as a distributed power source located directly at the point of consumption.
- **Long duration energy storage enabler:** Fuel cells play an important role in the emerging hydrogen economy by enabling excess renewable energy from solar and wind farms to be stored as hydrogen and later converted back into electricity. Unlike batteries, which become increasingly expensive for longer storage durations, hydrogen storage can economically provide energy over days, weeks, or even seasonal periods. This capability could become increasingly valuable as renewable energy penetration rises worldwide.
- **Fuel flexibility:** Certain fuel-cell technologies, particularly Solid Oxide Fuel Cells (SOFCs), can operate on a variety of fuels including hydrogen, natural gas, biogas, ammonia-derived hydrogen, and other hydrogen-rich fuels. This flexibility allows users to deploy fuel-cell systems today using existing fuel infrastructure while maintaining a pathway toward pure hydrogen operation as hydrogen supply chains mature.
- **Quiet operation and reduced maintenance:** Because fuel cells contain relatively few moving parts compared with combustion engines and turbine-based generators, they operate quietly and often require less routine maintenance. The absence of combustion also reduces mechanical wear and vibration, which can improve system reliability and lower lifecycle operating costs, particularly in stationary power applications.
- **Scalability across multiple applications:** Fuel cells can be deployed across a wide range of power levels, from portable power systems measured in watts to utility-scale installations generating multiple megawatts. This scalability allows the technology to serve residential buildings, commercial facilities, industrial plants, transportation platforms, microgrids, and large-scale data centers, making fuel cells one of the most versatile clean-energy technologies available today.

Limitations and constraints of fuel cells

- **High system cost:** Despite significant technological progress, fuel cells remain more expensive than many conventional power-generation technologies. The cost challenge stems from complex stack manufacturing, specialized materials, balance-of-plant components, and relatively low production volumes compared with mature technologies such as internal combustion engines, gas turbines, and batteries. While costs have declined over the past decade, achieving widespread commercial adoption will likely require further manufacturing scale, supply-chain development, and technological improvements.
- **Limited hydrogen infrastructure:** One of the biggest challenges facing fuel-cell deployment is the lack of hydrogen production, transportation, storage, and refueling infrastructure. Unlike electricity, which is already widely distributed through established grids, hydrogen supply networks remain in the early stages of

development in most regions. This infrastructure gap creates a chicken-and-egg challenge, where end users are reluctant to adopt fuel cell technologies without reliable hydrogen availability, while infrastructure developers are hesitant to invest until demand reaches sufficient scale.

- **Durability and lifetime requirements:** Although fuel-cell durability has improved substantially, long-term reliability remains a key focus area, particularly for commercial transportation and utility-scale installations. Continuous exposure to heat, humidity, contaminants, and repeated operating cycles can gradually degrade fuel cell performance over time. Customers in sectors such as transportation, power generation, and industrial infrastructure often require operating lifetimes measured in tens of thousands of hours, creating significant engineering challenges for system developers.
- **Regulatory and safety considerations:** Hydrogen is a highly flammable gas and requires specialized handling, storage, and transportation systems. Although hydrogen technologies have well-established safety standards, new fueling stations, pipelines, and storage facilities must comply with stringent regulations. Developing these standards and obtaining approvals can extend deployment timelines and increase project costs.
- **Technology fragmentation and lack of standardization:** The fuel cell industry encompasses multiple technology platforms, including PEM, SOFC, MCFC, and other architectures, each optimized for different applications. While this diversity encourages innovation, it can also slow industry standardization and create uncertainty for customers evaluating long-term technology choices. Unlike the battery industry, which is increasingly converging around a few dominant chemistries, the fuel cell sector remains relatively fragmented.

Implications to datacenter power architecture

Transition from backup power to primary power source

Traditionally, data centers rely on grid electricity for primary power and diesel generators for backup power during outages. Fuel cells are increasingly being evaluated not only as a replacement for diesel backup generators but also as a potential primary power source. As AI-driven workloads substantially increase power density and overall electricity demand, hyperscalers are exploring fuel cells as a means of deploying computing capacity in locations where grid power is constrained or unavailable. This could fundamentally shift data-center power architecture from a grid-centric design to one that incorporates distributed on-site generation.

Potential long term evolution toward microgrid-based datacenters

In the longer term, fuel cells could become a core component of data-center microgrids combining renewable generation, battery storage, hydrogen storage, and intelligent energy management systems. Rather than functioning as passive consumers of grid electricity, future AI-focused data centers may increasingly operate as self-contained energy ecosystems capable of managing their own generation, storage, and load balancing. Such an architecture could provide greater scalability, resilience, and energy independence than traditional grid-connected designs

Potential simplification of power distribution architecture

Fuel cells inherently generate DC power, which aligns more closely with the power requirements of modern servers and IT equipment. Current data centers typically involve multiple AC/DC and DC/DC conversion stages between the utility grid and the processor, each introducing efficiency losses. Over time, fuel cell adoption could encourage a greater migration toward direct DC power distribution architectures, reducing conversion losses and improving overall facility efficiency. Moreover, its DC output fits well with the shift into HVDC power delivery architecture for datacenters.

BULL CASE NT$3,300.00

40x average 2027-28e P/E

Strong sales growth with significant margin expansion: We assume a greater-than-expected contribution from higher-margin businesses such as power electronics and liquid cooling as well as greater synergies from acquired companies.

BASE CASE NT$2,500.00

30x average 2027-28e P/E

Strong YoY revenue growth in 2026-28, coupled with operating leverage: We expect steady growth in AI server power supply and data center infrastructure to be the key drivers. We see favorable mix and scale merits driving profit to grow more than double in 2027 vs. 2025.

BEAR CASE NT$1,150.00

14x average 2027-28e P/E

Moderate sales growth with slight margin improvement: We assume further profit drag from legacy products, smaller profit contribution from higher-margin businesses, higher opex and/or less meaningful contribution from acquired companies.

Valuation Methodology – Delta

Our price target (base case scenario value) is NT$2,500, derived from 30x 2027-28e P/E: We use price/earnings as our valuation methodology because we believe it appropriately captures Delta's earnings growth potential. We believe our target P/E multiple of 30x is justified by an earnings CAGR of 63% over 2025-28, which implies a PEG of 0.5. This is lower than the average of 1.0 in 2022-25, when the stock was trading at an average P/E of 23x for a 23% earnings CAGR.

Bull case scenario value – NT$3,300: We apply a 40x P/E multiple to our average base case estimate for 2027-2028. This scenario assumes a greater-than-expected contribution from higher-margin businesses such as power electronics and liquid cooling as well as greater synergies from acquired companies.

Bear case scenario value – NT$1,150: We apply a 14x P/E multiple to our average base case estimate for 2027-2028. This scenario assumes further profit drag from legacy products, smaller profit contribution from higher-margin businesses, higher opex and/or less meaningful contribution from acquired companies.

Exhibit 68: Delta: NTM P/E chart

Why Does Delta Trade at a Significant Valuation Discount to Delta Thailand?

Discussion of the valuation gap between Delta Electronics (2308.TW, currently 33x 12M forward consensus P/E) and Delta Electronics Thailand (DELTA.TH, 71x currently) has been ongoing for several years. If we look at their valuations before 2020, Delta was actually trading at a premium, with an average 17x 12M forward P/E in 2010-2020 vs. Delta Thailand's 13x. This made sense, as Delta is much more competitive in the global arena and Delta Thailand was set up as a subsidiary focused on manufacturing.

The situation flipped after 2020. Though Delta has been re-rated to trade at an average 23x 12M forward P/E since 2020, Delta Thailand has seen its valuation surge to an average of 60x over the same period. This cannot be explained by moves in their respective markets, either, as TWSE went from 14x forward P/E in 2010-20 to 16x after 2020, while the SET went from 13x to 16x.

We think this could be attributable to a few factors:

- **Different positioning within the Delta group:** Delta group has increased its stake in Delta Thailand to over 60% from about 20% in 2019 through a tender offer. Since then, there has been much more collaboration between Delta group and Delta Thailand. As Thailand emerged as one of the major manufacturing hubs within the Delta group, its earnings growth (28% in 2020-25) outpaced that of Delta Taiwan (19%).
- **Scarcity in the Thai stock market:** Delta Thailand is one of the relatively few large-cap Thai-listed companies that offer direct exposure to AI/data-center power and EV-related themes, whereas there are many such alternatives in Taiwan.
- **Limited free float:** As the Delta group owns a ~62% stake in Delta Thailand and there have been a few quite stable long-term shareholders, we think the effective free float is probably 20% or less.

Global Footprint – Delta

Comprehensive Global Operations

Aggressive capacity expansion plans

The company has been continuously diversifying its production base away from China owing to the trade turmoil back in 2018-2019, and then by supply chain disruptions during Covid. Management explicitly set a target of lowering China production to 60% of total capacity (from >70% previously) for the first time back in 2020. New capacity was added in Thailand, India, and Taiwan during 2020-2021. It then saw demand surge from various sectors, including EVs, automation and telecom, during 2022-23, followed by AI-related power suppliers and cooling solutions emerging in 2024. In order to grasp the emerging opportunities, relevant plant build-outs were planned accordingly, on top of the ongoing geographical diversification. It expanded its presence—production sites, R&D, and sales teams—in Europe and the US to better cope with operational disruptions and capture domestic demand, in addition to its existing setups in Taiwan, Thailand, and India. There was then a substantial increase in capex of NT$12.2bn in 2025 (vs. NT$5.6-6bn in 2023-24) as the company further accelerated its expansion plan, mainly on AI-related power/cooling demand and increasing capacity tightness, specifically in Thailand and the US. Delta continued to expand in Thailand by adding three new plants, with another three under construction for power and liquid cooling system offerings. In view of the capacity tightness reserved for AI-related business, it also started to prioritize margin-accretive business—i.e., de-emphasize business with net margins below 10%—which further optimized product mix.

Looking ahead into 2026 and beyond, expansion is likely to remain aggressive in order to fulfill substantial power and liquid cooling turnkey solution demand for large-scale data centers, while management also indicated that the new capacity added at the end of 2025 has already been fully taken. With capacity staying tight for AI power and cooling offerings, the company will continue to expand actively in China, Thailand, the US, and Tainan, Taiwan. It also plans to add mass production lines in Taoyuan, scheduled to be ready by 2028, in addition to the pilot run lines in Tainan. Against this backdrop, the capex budget has been revised up several times and is now roughly NT$50bn for 2026.

Financial Analysis – Delta

44% Revenue CAGR in 2025-28e

Delta's revenue growth was moderate in 2020 at merely 5%, making it the only year of the Covid disruption (2019-22) that did not see double-digit growth. Growth picked up to 11% in 2021, underpinned by surging demand for cloud, networking, and work-from-home infrastructure amid the pandemic, while the next uplift to 22% growth in 2022 was mainly fueled by increasing demand for EV- and data center-related components (server power supplies, networking switches, energy storage systems, etc). Revenue momentum subsequently moderated in 2023, growing just 4%, as the EV component business was impacted by the UAW strike in the US and automation demand in China stayed subdued, despite sustained demand for AI server power supplies and modules. Growth in 2024 was at a similar level, as strength in data center offerings were not enough to offset weakness in its legacy businesses.

Revenue surged 32% in 2025 to a record NT$554,885mn, driven by AI server rack power and cooling solutions, along with further spec upgrades and value growth.

We expect revenue to expand at a 44% CAGR over 2025-28, supported by ongoing AI server shipments, spec upgrades, 800 VDC power solutions, and turnkey liquid cooling offerings. As the upgrade to 800V HVDC power architecture is likely to take years given the complex design and high safety requirements, we expect AI server power solution upgrades to be separated into a few stages – from power shelves in AI server racks to standalone side-car power racks, from 50V DC to 800V DC output, from 72kW per power shelf to >250kW, etc, as well as power wattage increases for next-generation GPU rack designs.

By segment, Power Electronics has been the primary revenue driver, contributing at least 50% over the past years despite the company separating the Mobility segment from Power Electronics since 2024 so as to further distinguish revenue generated from EVs/ autos. We expect the segment to remain the key revenue contributor, supported by strong demand from AI server-related power solutions, and estimate it will reach 58% of revenue by 2028 vs. 50% in 2025. Infrastructure, the second-largest revenue contributor historically, is expected to grow along with the Power Electronics segment, fueled by demand for data center power-related solutions (i.e. UPSs, CDUs, sidecars, etc) as well as energy infrastructure-related offerings (i.e. SSTs (solid-state transformers), fuel cells, modular power solutions, micro grid management, etc.). We model the segment's revenue contribution to reach 35% by 2028 from 24% in 2024 and 33% in 2025. For Automation and Mobility, we expect their revenue contributions to decline sequentially throughout the years, with Automation dropping from 10% in 2025 to 4% in 2028 and Mobility falling from 7% in 2025 to 2% in 2028.

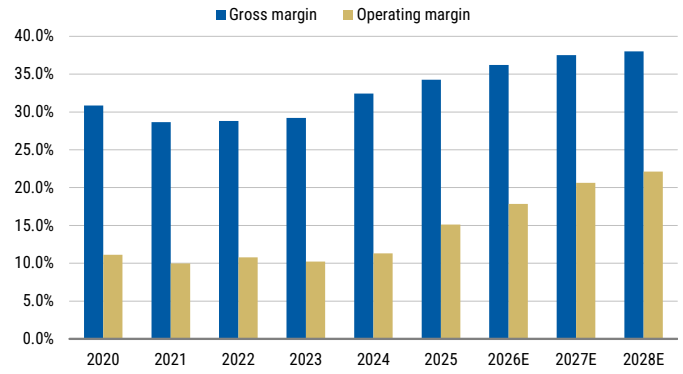
Continuous margin expansion on favorable product mix

Delta's gross margin stayed largely between 28-29% during 2021-23, as revenue was mainly driven by relatively lower-margin products, including EV- and consumer/IT-related products, while server-related offerings had yet to scale up. 2024 served as an inflection point, with the product mix changing structurally, supported by robust demand for AI data center-related offerings, while its legacy businesses stayed relatively weak. Gross margin thus grew by 3.2ppt YoY during the year, from 29.2% in 2023 to 32.4% in 2024. Increasing AI computing needs further increased power consumption and cooling requirements per rack, boosting demand for high-density AI power and cooling products along with related system-level solutions in 2025, which lifted gross margin by another 1.8ppt YoY to 34.3% for the year.

The opex ratio was largely stable, fluctuating around 18-19% between 2020 and 2023. It then increased to 19% in 2023 and 21.1% in 2024, mainly due to operating deleverage, higher R&D costs, and ongoing capacity expansion. The ratio declined back to 19.1% in 2025 on the back of an enlarged revenue base, despite R&D-related investments remaining elevated.

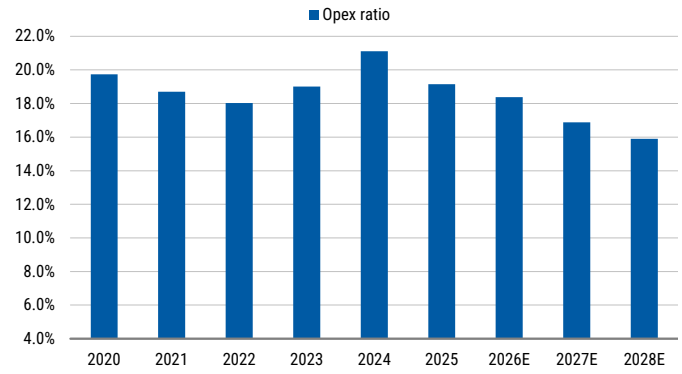
Looking ahead, we expect gross margin to continue expanding on the back of increasing revenue contribution from AI-related power supplies. We thus pencil in a 2.0ppt gross margin expansion to 36.2% in 2026, followed by further increases of 1.3ppt and 0.5ppt YoY in 2027 and 2028, respectively, reaching 38.0% by 2028. On the opex ratio, we expect Delta to continue benefiting from operating leverage in the coming years, and thus estimate operating margin to improve more substantially than gross margin, expanding by 2.7ppt YoY in 2026 to 17.8%, followed by further expansions of 2.8ppt and 1.5ppt in 2027 and 2028, reaching 20.6% and 22.1%, respectively.

Exhibit 82: Delta: Margin trend



Source: Company data, Morgan Stanley Research. E = Morgan Stanley Research estimates

Exhibit 83: Delta: Opex ratio



Source: Company data, Morgan Stanley Research. E = Morgan Stanley Research estimates

Net profit to grow at a 63% CAGR in 2025-28

Delta's operating profit grew sequentially throughout 2020-22, supported by gross margin expansion and a lower opex ratio, from NT$31,426mn in 2020 to NT$41,439mn in 2022. It then saw a slight 1% YoY decline in 2023 due to higher operating expenses as the company further stepped up its R&D investments, despite a 0.4ppt gross margin expansion in 2023. Operating margin also edged down accordingly by 0.6ppt to 10.2% during the year.

Operating profit returned to a growth trajectory from 2024 onward, growing 16% YoY in 2024 and 76% YoY in 2025, as AI-related power offerings started to scale up. Operating margin expanded faster than gross margin, supported by operating leverage and disciplined cost controls, increasing by 1.1ppt in 2024 to 11.3% and another 3.8ppt to 15.1% in 2025.

With the tax rate staying largely stable at ~20% during 2020-23 before starting to edge up in 2024 and reaching 23% in 2025, Delta's net profit growth was largely aligned with its operating profit growth trajectory. 2023 was an exception, as net profit still managed to grow 2% YoY despite a 1% YoY decline in operating profit, mainly due to higher FX gains.

The net margin trend has been largely aligned with that of operating margin in recent years. After dropping from 9.0% in 2020 to 8.5% in 2021, as lower gross margin was offset by a lower opex ratio, net margin hovered around the 8.3-8.5% level during 2021-24. Net margin was largely flat YoY in 2024 despite a 1.1ppt expansion in operating margin, mainly due to lower non-operating income and a slightly higher tax rate. We then saw a surge in 2025, with net margin expanding 2.5ppt YoY to 10.8%, benefiting from a larger contribution from higher-margin AI power offerings.

Looking ahead, we forecast net profit to grow 72% YoY in 2026e, followed by 63% YoY growth in 2027e and 56% YoY growth in 2028e, implying a 63% CAGR in 2025-28e, assuming a stable tax rate of 22%. Net margin is likely to rise accordingly, from 10.8% in 2025 to 13.3% in 2026, followed by further expansion to 14.9% in 2027 and 15.8% in 2028.

ROE to rise alongside margin expansion

ROE rose gradually but steadily during 2020-22, from 14.3% to 14.5%, mainly driven by improving asset turnover, offset by lower net margin. ROE edged down to 13.8% in 2023 and fell further to 12.6% in 2024 on the back of lower asset turnover, while net margin and financial leverage remained at similar levels. It then rebounded to 18.5% in 2025, supported by both improving asset turnover and net margin expansion, which was fueled by an increasingly favorable product mix and operating leverage.

Looking ahead, we expect ROE to continue rising, reaching 25.9% in 2026, 32.7% in 2027, and 37.8% in 2028, primarily driven by continued margin expansion and improving asset turnover. Net margin is projected to expand from 10.8% in 2025 to 15.8% in 2028, supported by gross margin improvement—from 34.3% to 38.0%—and a declining operating expense ratio from 19.1% in 2025 to 15.9% in 2028.

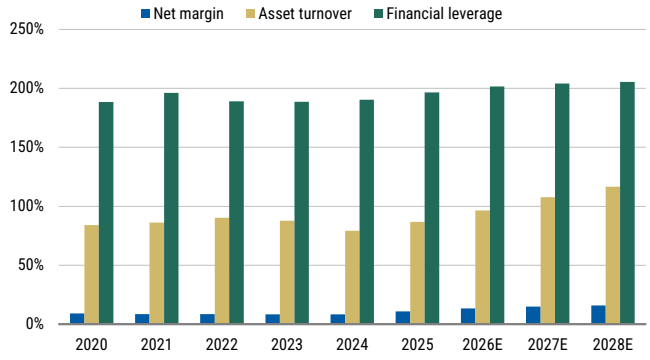
Exhibit 89: Delta: DuPont analysis



Source: Company data, Morgan Stanley Research. E = Morgan Stanley Research estimates

Improving balance sheet and continuous free cash flow generation

Delta has generated positive operating cash flow in recent years. Operating cash flow declined in 2021, mainly due to higher inventory buildup amid supply chain disruptions during the year. Free cash flow generation has also remained positive, while fluctuating with capital expenditures over the years. Free cash flow was exceptionally low at NT $5,292mn in 2021, as the company started to step up capex mainly for geographic capacity diversification and greater production flexibility—adding new capacity in Thailand, India, Tainan/Zhongli in Taiwan, and Wuhu, Wujiang, and Chongqing in Mainland China. Both absolute capex and the capex-to-sales ratio have trended upward since 2022, as Delta continued to add capacity for EV-related offerings and power and cooling solutions during 2023-24, with further acceleration in 2025 due to capacity tightness for AI power and cooling offerings, especially in Thailand and the US.

Looking ahead, the company aims to continue adding capacity worldwide to fulfill substantial demand for power and liquid-cooling turnkey solutions for large-scale data centers operated by major hyperscalers beyond 2027. Capacity remains tight for AI power and cooling offerings, so it continues to expand actively in China, Thailand, the US, and Tainan. Management also plans to add mass-production lines in Taoyuan, Taiwan, scheduled to be ready by 2028, in addition to the pilot-run lines in Tainan. Accordingly, we now estimate capex to rise to NT$70bn in 2026 from ~NT$46bn in 2025 and stay at a similar level in 2027 before edging down slightly to NT$60bn in 2028.

Delta's net cash position has been rising since 2021, with its net cash-to-equity ratio improving from just 2% in 2021 to 40% in 2025. We expect this ratio to continue rising, reaching 51% in 2026, 57% in 2027, and 63% in 2028, on strong free cash flow generation despite a higher total debt level amid ongoing capacity expansion.

Exhibit 90: Delta: Positive operating cash flow

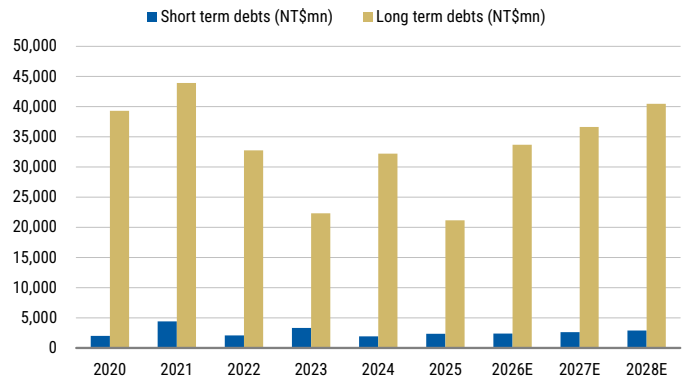
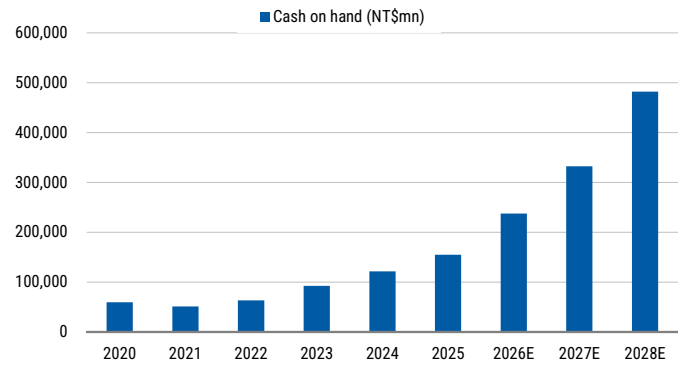
Exhibit 94: Delta: Debt position



Source: Company data, Morgan Stanley Research. E = Morgan Stanley Research estimates

Exhibit 95: Delta: Cash on hand



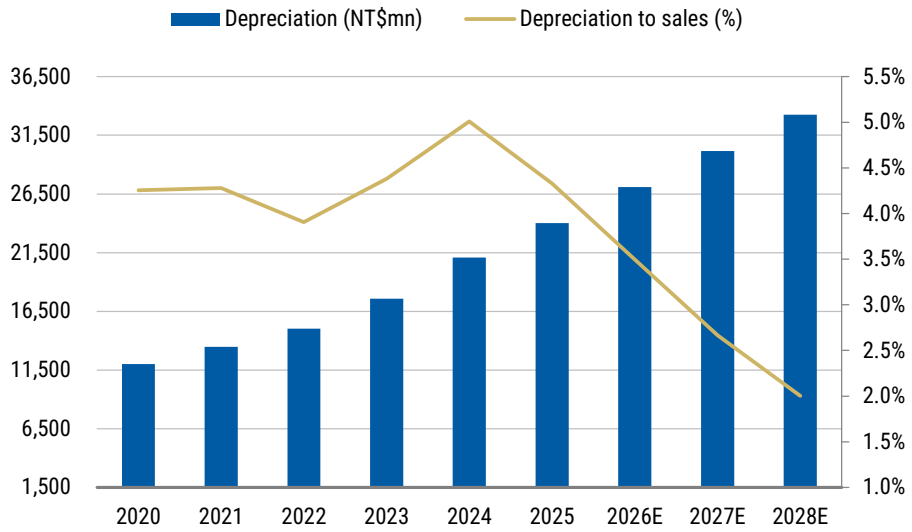
Source: Company data, Morgan Stanley Research. E = Morgan Stanley Research estimates

After edging down slightly in 2022 from a relatively high 7.3% in 2021, Delta's capex-to-sales ratio has been rising alongside its aggressive capacity expansion plans since 2022, despite an expanding revenue base. Looking ahead, as we expect capex to increase further in 2026, we project a capex-to-sales ratio of 9.0% for the year on robust revenue growth, before declining to 6.2% in 2027 and 3.6% in 2028.

The depreciation-to-sales ratio hovered around the 4-5% level during 2020-25. We

estimate the ratio will decline sequentially as the revenue base grows faster than capex and depreciation, from 4.3% in 2025 to 3.5% in 2026, 2.7% in 2027, and 2.0% in 2028.

Exhibit 96: Delta: Depreciation and depreciation to sales



Source: Company data, Morgan Stanley Research. E = Morgan Stanley Research estimates

Delta's cash conversion cycle (CCC) rose from 77 days in 2020 to a peak of 101 days in 2023 before improving to 80 days in 2025. By 2025, inventory days had increased from 80 days in 2020 to 93 days, while AP days had risen to 82 days after falling from 81 days in 2020 to 75 days in 2023. This was partly offset by improving AR days, which declined from 77 days in 2020 to 70 days in 2025.

Looking ahead, we expect the overall cash conversion cycle to improve further and remain at 77 days throughout 2026-28, mainly supported by improving AR days and a modest decline in inventory days.

Company Background – Delta

Company snapshot

Delta Electronics is a global provider of power and thermal management technologies, with a focus on energy-efficient products and integrated solutions. Founded in 1971, the company serves a broad range of applications spanning components, power and system products, thermal management, mobility, industrial and building automation, data centers, telecom, and energy infrastructure, across industries including automotive, healthcare, data centers, and power grids. By combining its capabilities in power electronics, digital technologies, and system integration, Delta aims to support customers in improving operational efficiency and advancing smart manufacturing, smart cities, and more sustainable infrastructure.

The company is headquartered in Taipei, Taiwan. Its global network consists of 293 operations, including 165 sales offices, 55 manufacturing sites, and 73 R&D centers, supporting customers worldwide.

Exhibit 101: Delta: Key milestones

Year	Key Milestones
1971	Delta Electronics, Inc. was established
1976	Achieved >US$1mn of revenue
1977	Moved plant to Taoyuan Guishan Industrial Park
1983	- Mass production of switching power supplies
1988	- Listed on the Taiwan Stock Exchange (code 2308) - Mass production of brushless DC fans - Invested in the establishment of Delta Electronics (Thailand) PCL, with an original stake of 6%
1989	- Established first Japan office in Tokyo - Established Delta Power Electronics laboratory in Raleigh, US
1992	- Inauguration of the first plant in China (Dongguan) - Established Delta Greentech (China) Co., Ltd. in Shanghai
1995	Delta Electronics (Thailand) PCL was listed on Thailand Stock Exchange
1999	- Inaugurated its new Taipei HQ - Established the Delta Power Electronics Center (DPEC) in Shanghai
2000	Established the Delta Power Electronics Science and Education Development program
2001	Inaugurated its Wuhu plant in China
2003	Acquired ASCOM Energy Systems and its plant in Slovakia
2006	Inaugurated Delta's Tainan Plant I
2008	Inaugurated its Rudrapur plant in India and Wuhu plant in China
2010	Inaugurated Chenzhou plant in China
2011	Inaugurated Shanghai R&D and Operations Center and Taoyuan R&D Center in Taiwan
2012	Mr. Yancey Hai was elected Chairman and Mr. Ping Cheng was appointed as CEO
2015	- Acquired Eltek ASA, a leading provider of telecom power, industrial power, and data center power solutions - Inaugurated Delta Americas' headquarters green building and Taoyuan Plant 5
2017	- Announced organizational adjustment to focus on Power Electronics, Automation, and Infrastructure as main business categories - Acquired a controlling stake in VIVOTEK
2019	- Acquired a controlling stake in Delta Electronics (Thailand) Public Company Limited - Acquired lighting-solutions brand Amerlux
2020	Accquired Trihedral, a Canadian SCADA and IIoT software company, to strengthen industrial automation and system-integration businesses
2021	Acquired March Networks, a global video-surveillance provider, and Universal Instruments, a leader in precision automation solutions for electronics manufacturing
2022	- Inaugurated a new facility at the Automotive Campus in Helmond, the Netherlands - Purchased land and a factory in Plano, Texas, United States
2023	Acquired TB&C, a leading provider of automotive high-voltage hybrid components
2024	- Mr. Ping Cheng selected as Chairman while concurrently serves as CEO - Adjusted business categories into Power Electronics, Mobility, Automation, and Infrastructure
2025	- Inaugurated new North East Asia HQ in Tokyo - Acquired ACT Genomics and Noda RF Technologies

Product offerings

Delta's key offerings can be categorized into four key areas: Power Electronics, Infrastructure, Mobility, and Automation.

1. Power Electronics

Delta operates in switching power supplies, thermal management, and passive components, supplying products for ICT, cloud computing, EVs, and industrial and commercial applications. The company frames its business around energy efficiency and

sustainability and now also offers grid-to-chip power and thermal management solutions for data centers.

- Components: Includes essential passive and magnetic components used in portable devices, AI cloud computing, automotive electronics, and IoT.
- Power and System: Contains power products and systems for AI, cloud computing, IoT, client devices, and industrial, medical, lighting, e-mobility, and electrical-appliance applications.
- Fans and Thermal Management: This mainly covers air and liquid cooling solutions for AI cloud and edge computing, EVs, as well as industrial, commercial, and residential sectors. Key products includes DC and EC fans, thermal modules, liquid cooling cold plates, and coolant distribution units, etc.

Exhibit 102: Delta: Key offerings for the power electronics segment

POWER ELECTRONICS							
Components							
Inductors	RF Inductors	Standard Power Module (DC/DC Converter & AC/DC Module)	Transformers	Networking	EMI Filters	Solenoids	Current Sensing Resistor
				Wire-Wound Common Mode Choke			
Power and System							
Embedded Power	Adapters	Industrial Power	Medical power	Industrial Battery Charging	USB Socket Outlets	High Voltage Power	Hydrogen Power
				Modular Charging System			Fans and Thermal Management							
Chip Level Cooling Solution	DC Brushless Fans and Blowers	Thermal Module	Cold Plate Loop	In-rack CDU	Rack Manifold	Electical Pump	In-row CDU
Communication Equipment Cooling	Energy Infrastructure and Industrial Automation Cooling	Portable Device and Equipment Cooling	Infrastructure Ventilation	Automotive Thermal			
DC Brushless Fans and Blowers	DC Brushless Fans and Blowers	Laptop cooling	DC Brushless Fans and Blowers

2. Infrastructure

Delta supplies ICT and energy infrastructure to support demand related to AI, smart cities, and IoT. Its ICT infrastructure solutions target data centers and telecom networks, while its energy infrastructure offerings integrate AIoT, power conversion, and microgrid control across energy generation, storage, and management.

- ICT Infrastructure: It mainly provides infrastructure for AI computing and 5G

communications under this category, ranging from telecom cell sites to data centers. The portfolio includes power, air and liquid cooling, networking equipment, and management software.

- Energy Infrastructure: The company offers renewable energy, AIoT-based energy management, and power conversion technologies for low-carbon transformation. Solutions include solar inverters, wind power converters, energy storage, EV charging, and management platforms for smart grids. It also supplies semiconductor high-voltage power supplies, automated testing instruments, and variable-frequency drives for industrial processes.
- Display and Visualization: Delta's display technologies serve control rooms, public information systems, projection mapping, and exhibition or event spaces. Offerings range from large-scale and 8K projection systems to integrated video-wall solutions and can be customized for mission-critical operations.

Exhibit 103: Delta: Key offerings for the infrastructure segment

INFRASTRUCTURE							
ICT Infrastructure							
Uninterruptible Power Supplies (UPS)	Battery Backup System (BBU)	800 VDC In-Row Power	Power Distribution Unit (PDU)	Rack-Mount Remote Power Panel (rRPP)	Liquid and Air Cooling	Modular Rack & Rack Mount Accessories	Lithium-ion UPS Battery System
Ethernet Switches	Indoor/Outdoor Telecom Power Systems	Renewable Hybrid Power Systems	Small Cell Power Systems	Li-ion Battery Backup Systems	Campus/Enterprise Networks		
Energy Infrastructure							
EV Charger	Power Conversion System (PCS)	All-in-One ESS solution	Distributed ESS Solutions	Solar Inverter	Wind Power Converter	Solid State Transformer Platforms	Medium Voltage Drives
High Voltage Power	DC EV Charger ATS	Power Supply ATS	Solid Oxide Fuel Cell (SOFC)	Hydrogen Energy Solution	Active Power Filter (APF) / Static Var Generator (SVG)		
Display and Visualization							
Business and Education Multimedia Projector	High Performance Projector	DLP, LED and LCD Video Wall	Wireless Collaboration and Signage	Vivitek			
				vivitek

3. Mobility

Delta applies its power electronics and motor technologies to smart mobility, supplying

power systems, drive technologies, and integrated powertrain solutions. It works with automakers to develop electric vehicles, positioning the business as part of the low-carbon transition and sustainable urban mobility.

- EV Powertrain System: The company's powertrain portfolio for EV makers includes On-board Charging Modules (OBCM), DC/DC converters, power electronics combos, and traction inverters, along with X-in-One integrated solutions.

Exhibit 104: Delta: Key offerings for the mobility segment

MOBILITY						
EV Powertrain System						
EV Power Electronics	Traction Products	x-EV Power Management	In-Vehicle Network and AI Driving Computing	Automotive Thermal	Low Voltage Powertrain	EV Charging

Source: Company data, Morgan Stanley Research

4. Automation

Delta provides automation solutions for industrial and building applications through integrated software and hardware. Its industrial automation offerings support smart production and operational efficiency, while its building automation solutions target energy-efficient, secure, and sustainable spaces.

- Industrial Automation: This segment provides automation solutions across industries by utilizing AI, big data, IoT, and digitized manufacturing models. Relevant offerings support diverse production needs, including customized, small-volume and high-variety production, as well as mass production.
- Building Automation: Delta's Building Automation Solutions use an IoT architecture and integrate technologies from five brands: Amerlux lighting, Delta Controls and LOYTEC IP-based building control, and March Networks and VIVOTEK surveillance. The management platform enables operators to manage energy use, occupant comfort, and sustainability goals through a single interface.

Exhibit 105: Delta: Key offerings for the automation segment

AUTOMATION							
Industrial Automation							
Inverters - AC Motor Drives	Drive System for Motion Control Solutions	Motors	Servo Systems - AC Servo Motors and Drives	CNC Solution	PC-Based Motion Control Solution	Linear Motion	Embedded Motion Controller
Industrial Ethernet Solution	Temperature Controllers	High Voltage Power	SCARA Robot	Electric Servo Press			
Building Automation							
Delta Controls	LOYTEC	Indoor Air Quality Monitor	LED Lighting - Industrial/ Road/Fishing/Commercial	Smart Surveillance - VIVOTEK	Healthy Lighting

Monthly sales vs. share price

Delta's monthly sales show that seasonality has been an important factor over the years. Following a substantial increase in monthly sales since 2024, traditional seasonal patterns have become less pronounced as revenue from AI-related offerings has started to outweigh them, while liquid-cooling-related offerings have added a new layer of monthly sales volatility. The correlation between the company's monthly sales and share price movements has remained high, at ~87% since 2023.

The company reported August monthly sales of NT$64,586mn (-4% MoM/+35% YoY). We saw the Power Electronics segment decline sequentially from a high base, offset by growth in Automation and slight growth in the Infrastructure segment.

Key management & shareholding structure

Delta's board currently consists of eight directors and five independent non-executive directors. Its founder, Chung-Hua Cheng (Bruce Cheng), and his sons, Ping Cheng and An Cheng, together owned a 7% stake as of March 2026. Excluding the founder and his family, the management team held a stake of ~0.1% as of March 2026.

The FINI holding percentage as of July 14, 2026, was 63%, versus a previous peak of 78% in February 2011 and a historical average (since 2010) of 69%.

Exhibit 108: Delta: Shareholding structure

Shareholders	%

Delta: Management profiles

Name	Title	Education	Work Experience
Bruce C.H. Cheng	Founder and Honorary Chairman Chairman, Delta Electronics Foundation	Bachelor of Electrical Engineering — National Cheng Kung University	- 2012–present — Honorary Chairman, Delta Electronics - 1990–present — Founded and chairs the Delta Electronics Foundation - 1971–2012 — Founder and Chairman, Delta Electronics - Before 1971 — Worked at TRW and Air Asia Co.
Ping Cheng	Chairman and CEO	Bachelor of Business Administration — California State University, East Bay	- Joined Delta in 1988 - 2024–present — Chairman - 2012–present — CEO of Delta Electronics - 2010–2012 — Corporate Senior Vice President and President of China Region - 2008–2010 — Senior Vice President & General Manager of Power Supply Business Group - 1998–2008 — Deputy General Manager of Component Business Group (Delta China); Executive Vice President of China Region
Mark Ko	Vice Chairman	Bachelor of Control Engineering — National Chiao Tung University	- Joined Delta in 1988 - 2012–present — Vice Chairman of Delta Electronics - 2004–2012 — President and Chief Operating Officer of Delta Group - 1994–2004 — General Manager of Power System Business Group
Simon Chang	Board Member President and COO	EMBA — Chung Yuan Christian University	- Joined Delta in 1981 - 2017–present — Board Member; President and Chief Operating Officer, Delta Electronics - Before 2017 — Senior Vice President and General Manager of Industrial Automation Business Group - From 1995 — Director of Industrial Automation Division
Victor Cheng	Board Member CEO of Delta Electronics (Thailand) PCL.	-Master of Electrical Engineering — Santa Clara University -Bachelor of Electrical Engineering — Santa Clara University	- Joined Delta in 1993 - 2024–present — Board Member of Delta; CEO of Delta Electronics (Thailand) PCL. - 2023–2024 — Executive Vice President of Infrastructure Business - 2017–2023 — General Manager of Information and Communications Technology Business Group - 2014–2017 — General Manager of Power System Business Group - 2002–2019 — President, then Chairman of Delta Networks - 1999–2002 — Head of Video Display Business Unit - 1993–1999 — International Sales Director to Assistant General Manager of Video Display Business Unit
Shan-Shan Guo	Board Member Chief Brand Officer Vice Chairman, Delta Electronics Foundation	- Master of Marketing and Communications — University of Michigan - Bachelor of Foreign Languages and Literatures — National Taiwan University	- Joined Delta in 2010 - 2011–present — Chief Brand Officer of Delta
Johnson Lee	Executive Vice President Infrastructure Business (IFB)	- EMBA — National Taiwan University - Bachelor of Industrial Engineering and Systems Management — Feng Chia University	- Joined Delta in 1985 - 2024–present — Executive Vice President of Infrastructure Business - 2012–2017 — Chief Operating Officer of Delta Electronics - 2004–2012 — General Manager of Power Supplies Business Group - Earlier — Procurement manager; General Manager of materials management
Ted Shyy	Executive Vice President Power Electronics Business (PEB)	Master in Materials Science and Engineering — National Cheng Kung University	- Joined Delta in 1988 - 2024–present — Executive Vice President of Power Electronics Business - 2014–present — Chief Executive Officer of Cyntec (concurrent role) - 2011–2014 — General Manager of Delta Components Business Group - 2003–2014 — General Manager of Cyntec - 1991–2003 — Rotation in Research and Development, production and marketing, under Cyntec, a joint venture between Delta and Japan's SUSUMU
James Tang	Executive Vice President Mobility Business (EVB)	- EMBA — National Taiwan University - Bachelor of Management Science — National Cheng Kung University	- Joined Delta in 1988 - 2024–present — Executive Vice President of Mobility Business; continues as General Manager of Electric Vehicle Solutions Business Group - 2017–present — General Manager of Electric Vehicle Solutions Business Group - 2008–2016 — General Manager across Power Supplies, Consumer and Lighting Solutions, and Embedded Power Supplies business groups - 1988–2008 — Procurement; Materials Manager; Director of Personal Computer Business Group
Jimmy Yiin	Executive Vice President Global Business Operations (GBO)	Master of Business Administration — National Taiwan University and Fudan University	- Joined Delta in 1992 - 2023–present — Executive Vice President of Global Business Operations - 2019–2022 — General Manager of Power System Business Group - 2014–2019 — Vice Chairman of Delta Greentech (China); General Manager of Delta Electronics (Shanghai) - 2008–2013 — General Manager of Delta Electronics (Jiangsu) - 1999–2007 — Purchasing manager/materials section chief of Delta Dongguan and Delta Networks
Rock Huang	Executive Vice President Global Manufacturing	Master of Industrial Engineering and Management — National Taipei University of Technology	- Joined Delta in 1987; ~40 years of experience in the manufacturing field - 2026–present — Executive Vice President of Global Manufacturing - 2020–2026 — President of Global Manufacturing - 2019–2020 — President of Delta China - 2018–2019 — Executive Vice President of Delta China - 2007–2018 — General Manager of Southern China, leading Dongguan team

Risk Reward – Lite-On Technology (2301.TW)

Stronger ASIC server power supply but fair risk-reward

PRICE TARGET NT$315.00

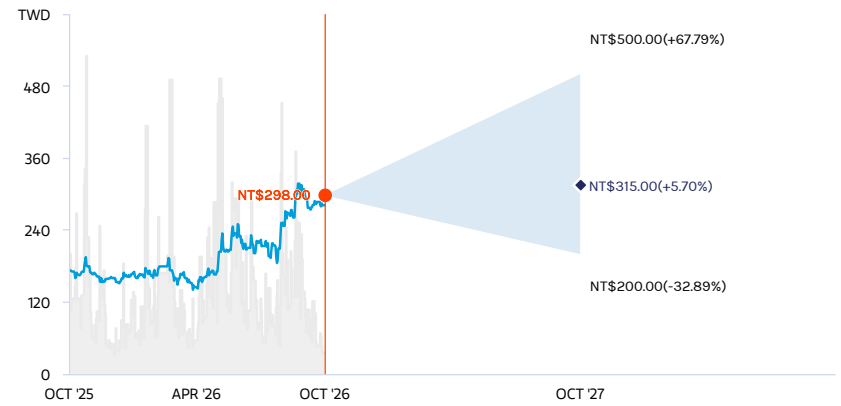
Base case: P/E multiple of 17x based on average 2027-28 EPS. We believe our target multiple is justified by the 47% earnings CAGR we estimate for 2025-28, implying a PEG of 0.4, versus the stock's 16x P/E and 2% earnings CAGR during 2022-25, which implied a PEG of 7.2.

Consensus Price Target Distribution NT$176.00 NT$300.50 MS PT NT$400.00

Source: Refinitiv, Morgan Stanley Research

◆ Mean ◆ Morgan Stanley Estimates

RISK REWARD CHART



Key: Historical Stock Performance ● Current Stock Price ◆ Price Target

Source: Refinitiv, Morgan Stanley Research

EQUAL-WEIGHT THESIS

- We expect Lite-On Tech to benefit from strong AI server power demand in 2026-27, with the company gaining more traction on ASIC platforms.
- We are mindful of weakness in consumer/IT demand amid rising input costs, which could weigh on Lite-On Tech's profit in 2026-27.
- Liquid-cooling sidecar CDU system shipments may take more time to ramp up.

BULL CASE NT$500.00

27x average 2027-28e P/E

Better-than-expected margin expansion: Operating efficiency and accelerating production automation drive margin expansion, while new-business revenue comes in earlier than expected. Growth in cloud computing and automotive electronics is stronger than expected.

BASE CASE NT$315.00

17x average 2027-28e P/E

AI server projects progress, but some business uncertainties remain: We expect margin improvement from a better product mix as AI server power supply projects ramp up. However, we are mindful of weakness in consumer/IT demand amid rising input costs.

BEAR CASE NT$200.00

11x average 2027-28e P/E

Operating margin contraction: Operating efficiency improves less than expected, while pricing competition intensifies amid macro volatility; automotive electronics take longer to ramp up.

Risk Reward – Lite-On Technology (2301.TW)

Valuation Methodology – Lite-On

Our price target (base case scenario value) is NT$315, derived from 17x 2027-28e P/E: We use price/earnings as our valuation methodology because we believe it appropriately captures Lite-On's earnings growth potential. We believe our target P/E multiple of 17x is justified by an earnings CAGR of 47% over 2025-28, implying a PEG of 0.4. This is lower than the average PEG of 7.2 in 2022-25, when the stock was trading at an average P/E of 16x for a 2% earnings CAGR.

Bull case scenario value – NT$500: We apply a 27x P/E multiple to our average base case estimate for 2027-28. This scenario assumes better-than-expected margin expansion, driven by improved operating efficiency and accelerating production automation, while new business revenue comes in earlier than expected. Growth in cloud computing and automotive electronics is stronger than expected.

Bear case scenario value – NT$200: We apply an 11x P/E multiple to our average base case estimate for 2027-28. This scenario assumes weaker-than-expected improvement in operating efficiency, while pricing competition intensifies amid macro volatility; automotive electronics take longer to ramp up.

Exhibit 114: Lite-on: NTM P/E

Global Footprint – Lite-On

More capacity expansion to come

Lite-On's production footprint spans the globe, with 15 sites in total, although it remains heavily weighted toward China. The company has been expanding aggressively, both to meet strong demand for AI power supplies and to support its strategy of geographic risk diversification and proximity to customers.

Looking at its expansion plans in recent years, the company has continued to demonstrate its commitment to diversifying production away from China and increasing proximity to customers. It completed its Thailand plant expansion and announced the second-phase expansion of its Vietnam facility in 2021. It then established automotive electronics and cloud power production lines in Dallas, Texas, in 2H22, along with the official launch of the second phase of its Hai Phong plant in Vietnam, which focuses on networking and consumer products. In 2023, it began expanding its second Kaohsiung plant and announced additional capacity expansion in Vietnam. In 2024, it committed a further US $120mn to establish a wholly owned subsidiary in Vietnam and began progressively shifting production of high-end power products to that facility. In 2025, the company aimed to double capacity as demand for AI server power supplies and battery backup units (BBUs) surged, focusing primarily on capacity expansion in the US, Kaohsiung, and Vietnam.

For 2026, the company expects capacity allocation of ~40% in China, 27% in Vietnam, 20% in Taiwan, and 10% in the US, with the remaining non-China footprint (i.e., Mexico, Brazil, and Thailand) accounting for ~3% of total capacity. It has also announced investments of US$919mn and US$149mn in its US and Vietnam subsidiaries, respectively, to continue expanding power-related capacity, mainly for PSUs. The capex budget for 2026 has also been raised to ~NT$13bn, versus ~NT$7bn in 2025.

Financial Analysis – Lite-On

29% revenue CAGR in 2025-28

Lite-On's revenue growth was relatively moderate during 2020-22, with revenue expanding at a CAGR of 5% over the period. The company benefited from surging cloud computing demand, which drove increasing demand for power supplies, along with rising demand from EV/automotive electronics, although growth was offset by elevated component costs and supply-chain disruptions during COVID-19. Revenue then fell by 14% in 2023 and 8% in 2024 due to a post-pandemic demand pullback across the consumer electronics market and PC/NB model transitions, coupled with softening demand from EV-related businesses. The IT segment declined 20%/11% YoY, while the opto-electronics segment declined 11%/9% YoY in 2023/2024, respectively.

Revenue rebounded in 2025, growing 21% YoY, as the company began to benefit from surging demand for AI/cloud server power supplies. Contributions from ramping high-voltage/AI power infrastructure products began to increase, coupled with a partial recovery in the IT segment, mainly fueled by power adapter shipments for game consoles and gaming PCs/NBs, as well as related power offerings for low-Earth-orbit applications.

Looking ahead, we estimate revenue to expand at a 29% CAGR in 2025-28e, driven by the AI server power demand boom, while we remain mindful of weakness in consumer/IT demand amid elevated component costs.

By product segment, IT-related products were the primary revenue driver in past years, while 2025 marked a crossover point, with the contribution from the Cloud & AIoT segment surpassing that of the IT segment, mainly supported by AI power-related offerings. IT revenue contribution declined from 72% in 2020 to 38% in 2025, and we estimate it will reach 17% by 2028. For the Cloud & AIoT segment, revenue contribution grew substantially from 27% in 2021 (0% in 2020) to 45% in 2025; we estimate it will account for 74% of total revenue by 2028, on the back of surging AI power-related demand. For opto-electronics, we expect revenue contribution to decline from 17% in 2025 to 9% in 2028.

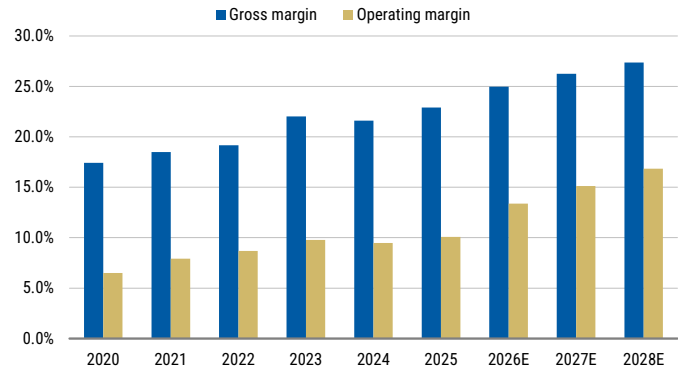
Continuing margin expansion

Lite-On's gross margin rose steadily over the years, from 17.4% in 2020 to 22.0% in 2023, thanks to a continually improving product mix. Gross margin dipped to 21.6% in 2024, mainly due to a smaller revenue base, while contributions from AI/cloud had yet to scale and margins were weighed down by learning-curve costs at the new Vietnam site. It then rose to 22.9% in 2025 as the AI server power business began to scale alongside rising BBU (battery backup unit) shipments, resulting in a more favorable product mix.

The opex ratio was largely stable at 10.5-11.0% during 2020-22. It then increased to 12.2% in 2023 and 12.1% in 2024, mainly due to operating deleverage and higher R&D costs. The opex ratio edged up further to 12.8% in 2025, mainly due to ongoing investment in R&D to support new business development in AI server power supplies, BBUs, liquid cooling, etc., along with a one-off tariff prepayment.

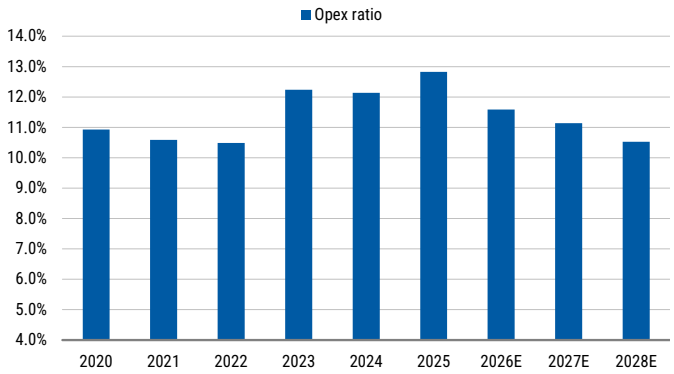
Looking ahead, we expect margins to continue expanding on a favorable product mix. We now pencil in a 2.1ppt gross margin improvement in 2026 to 25.0%, followed by expansions of 1.3ppt and 1.1ppt in 2027 and 2028, to 26.3% and 27.4%, respectively. For the opex ratio, we expect it to decline sequentially as the revenue base expands. Accordingly, we estimate operating margin to improve by 3.3ppt to 13.4% in 2026, followed by expansions of 1.7ppt in both 2027 and 2028, reaching 15.1% and 16.8%.

Exhibit 122: Lite-on: Margin trend



Source: Company data, Morgan Stanley Research. E = Morgan Stanley Research estimates

Exhibit 123: Lite-on: Opex ratio



Source: Company data, Morgan Stanley Research. E = Morgan Stanley Research estimates

Net profit to grow at a 47% CAGR in 2025-28

Operating profit grew steadily alongside gross margin expansion during 2020-22, from NT $10,206mn to NT$15,073mn. It then fell 4% YoY in 2023 and a further 11% YoY in 2024 due to higher operating expenses, mainly from R&D costs, despite gross margin expansion in 2023. Operating margin increased by 1.1ppt YoY to 9.8% in 2023 amid a smaller revenue base, before declining by 0.3ppt YoY to 9.5% in 2024 on lower gross margin and an elevated opex ratio.

Operating profit rebounded by 29% YoY to NT$16,738mn in 2025, supported by both an expanding revenue base and strengthening gross margin. Operating margin also improved, increasing by 0.6ppt YoY to 10.1%, as the recovery in gross margin was partly offset by higher opex.

With the tax rate remaining relatively stable at 20-24%, Lite-On's net profit growth has generally tracked its operating profit growth. An exception occurred in 2023, when net profit grew 3% YoY despite a 4% decline in operating profit, mainly due to higher FX gains during the year.

Net margin has broadly tracked operating margin in recent years. It reached a record high of 9.8% in 2023 on improving gross margin, despite a higher opex ratio. It then declined to 8.7% in 2024 on gross margin erosion before rebounding to 9.1% in 2025, benefiting from increasing demand for AI power supplies.

Looking ahead, we forecast net profit to grow 67% YoY in 2026e, followed by 44% YoY growth in 2027e and 32% YoY growth in 2028e, implying a 47% CAGR in 2025-28e. Net margin is likely to rise to 11.2% in 2026, 12.2% in 2027, and 13.4% in 2028.

ROE to rise

ROE movements were highly correlated with changes in net margin during 2020-22, as asset turnover and financial leverage were largely stable over the period. ROE edged down slightly in 2023 despite higher net margin, which increased from 8.2% to 9.8%, due to lower asset turnover and financial leverage. ROE fell further to a trough of 13.1% in 2024 as net margin and asset turnover declined further. It then rebounded to 16.8% in 2025, primarily supported by net margin expansion, fueled by a favorable product mix, along with an improvement in asset turnover back to the 80% level.

Looking ahead, we expect ROE to continue rising, reaching 26.4% in 2026, 35.3% in 2027, and 42.4% in 2028, primarily driven by continued margin expansion and improving asset turnover. Net margin is projected to increase from 9.1% in 2025 to 13.4% by 2028, supported by gross margin improvement from 22.9% to 27.4% and a decline in the operating expense ratio from 12.8% in 2025 to 10.5% in 2028.

Improving balance sheet and continuous free cash flow generation

Lite-On has consistently generated positive operating cash flow in recent years, although cash flow dropped notably in 2021, 2024, and 2025, mainly due to higher working-capital-related cash outflows. The company has also consistently generated positive free cash flow, with capital expenditures generally at the NT$3-4bn level over the years. An exception occurred in 2025, when capital expenditure rose to NT$6.7bn, mainly for power-related capacity expansion in Vietnam, Taiwan, and the US.

As the company has announced investments of US$919mn and US$149mn in its US and Vietnam subsidiaries, respectively, alongside continued expansion of power-related capacity, mainly for PSUs, we now estimate capex to rise to ~NT$13bn in 2026, versus ~NT $7bn in 2025. Capex should then decline to NT$9bn in 2027 as investment levels normalize.

Lite-On's net cash position has remained relatively healthy, with its net cash-to-equity ratio improving from 65% in 2020 to 80% in 2023. It then declined to 75% in 2024 and 66% in 2025, as total debt increased by NT$7.7bn in 2024, while cash on hand declined in 2025, likely due to increasing capital investment.

Looking ahead, we assume the total debt position will remain stable despite ongoing capex investment. The net cash position should continue to grow sequentially on the back of positive free cash flow generation.

Exhibit 130: Lite-on: Positive operating cash flow

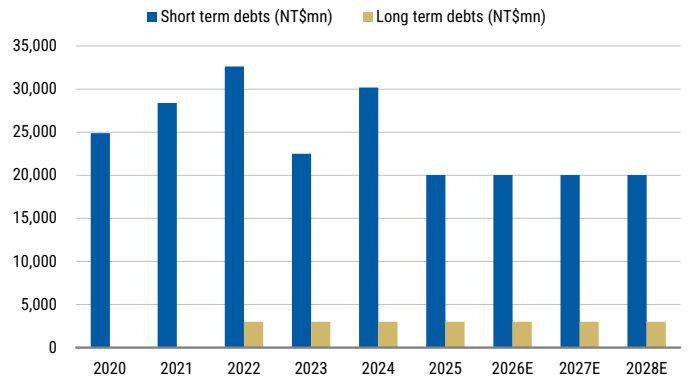
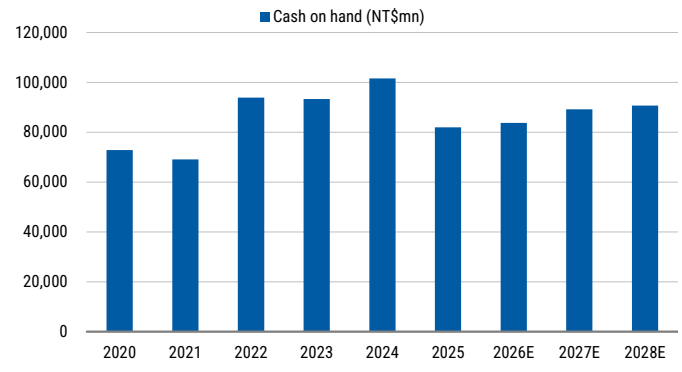
Exhibit 134: Lite-on: Debt position



Source: Company data, Morgan Stanley Research. E = Morgan Stanley Research estimates

Exhibit 135: Lite-on: Cash on hand

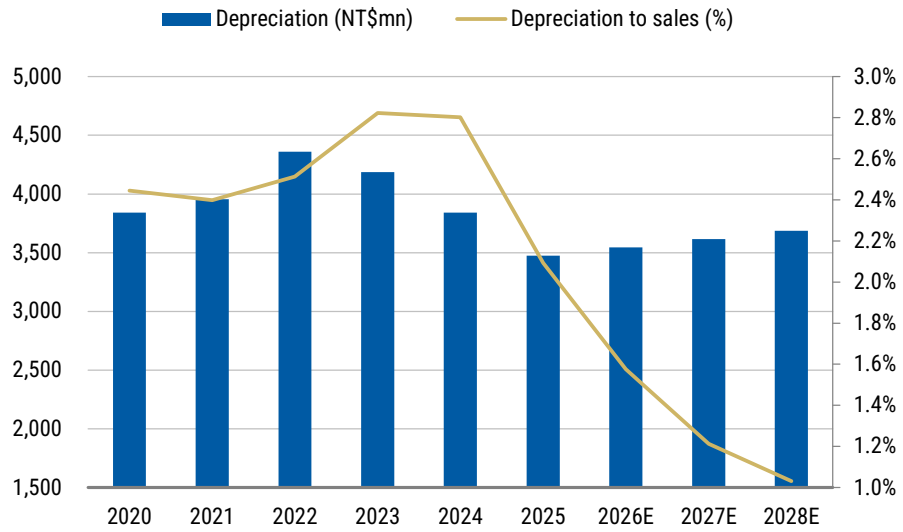


Source: Company data, Morgan Stanley Research. E = Morgan Stanley Research estimates

Lite-On's average capex-to-sales ratio was around 2.3-2.4% during 2021-24, then rose to 4.1% in 2025 as the company began aggressively expanding global capacity, despite a larger revenue base during the year. Looking ahead, we project the capex-to-sales ratio to rise to 5.9% in 2026 amid continued production-site development, before declining to 3.0-3.3% in 2027-28 as investments normalize.

The depreciation-to-sales ratio remained at 2.4-2.5% during 2020-22 before rising to 2.8% in 2023, in line with higher capex during the year. The ratio then declined to 2.1% in 2025 on a larger revenue base. Looking ahead, we expect the ratio to decline further as the revenue base grows faster than capex and depreciation, falling to 1.6% in 2026 and 1.0% in 2028.

Exhibit 136: Lite-on: Depreciation and depreciation to sales



Source: Company data, Morgan Stanley Research. E = Morgan Stanley Research estimates

Lite-On's cash conversion cycle (CCC) fluctuated within a relatively narrow band of roughly 35-44 days between 2020 and 2025, reflecting generally stable but modestly shifting working-capital efficiency. CCC was at a relatively low level of 35 days in 2020, supported by lower inventory days and higher AP days, before rising steadily to 44 days in 2022 as both inventory days (78) and AR days (85) increased, while AP days were slightly lower (119). From 2023 onward, the cycle improved meaningfully, falling to 36 days as AP days extended sharply from 119 in 2022 to 135. This improvement partially reversed in 2024, with CCC ticking up to 39 days as inventory and AR days both increased to 89 and 92 days, respectively, even as AP days extended further to 143. CCC then eased again to 37 days in 2025 as AP days moderated slightly to 138, alongside stable inventory and receivables levels.

Looking ahead, we expect the overall cash conversion cycle to edge up slightly from 37 days in 2025 to 40 days in 2028, as increasing AR days and lower AP days are partially offset by improving inventory days.

Company Background – Lite-On

Company snapshot

Founded in 1975, Lite-On Technology is a Taiwan-based manufacturer of optoelectronic components, power supplies, and information technology products. The company produced Taiwan's first LEDs and became the first technology company listed on the Taiwan Stock Exchange in 1983. It mainly operates through four business segments: Information Products (power supplies, servers, networking equipment, keyboards, and chassis), Optoelectronics (LED packaging, LED lighting, automotive electronic components, and camera modules), Storage (storage components), and other supporting businesses. Additional product lines include energy management solutions, such as data center power supply systems and cloud server chassis; networking and surveillance products; and automotive electronics, including ADAS and EV charging solutions.

Lite-On is headquartered in Taipei, Taiwan. The company operates manufacturing sites, R&D centers, and sales offices across Asia (Taiwan, China, Japan, and Singapore), the US, and Europe (the UK, the Netherlands, and Germany).

Exhibit 141: Lite-on: Key milestones

Year	Key Milestones
1975	Established LITEON's first LED factory in Zhonghe, Taiwan
1983	Became the first electronics company listed on the Taiwan Stock Exchange (Ticker: 2301)
1985	Began manufacturing power supply units.
1989	Opened first overseas plant in Bangkok, Thailand, for optoelectronic products.
1990	• Set up a switching power supply plant in Penang, Malaysia. • Silitek acquired Maxi Switch, the No. 3 U.S. keyboard maker.
1991	Acquired NPE's switching power supply plant in the UK.
1994	Established a subsidiary in California, USA.
1999	Spun off the Optoelectronics business unit as LITEON IT Corp.
2002	LITEON Electronics, Silitek, LITEON Technology, and GVC merged into LITEON Technology Corporation (Ticker: 2301)
2003	Moved global headquarters to Neihu Science Park.
2006	• Acquired BenQ's Optical Disk Drive business, becoming a top-3 global ODD maker. • Partnered with Philips to enter the automotive disc drive market. • Acquired 100% of LITEON Automotive Corp., expanding into automotive electronics.
2007	• Acquired 100% of Li Shin International via stock swap, strengthening power supply resources for LCD TVs and other products. • Completed tender offer for Perlos, the world's largest handset casing maker.
2009	Opened East China Regional HQ in Wujin, Changzhou.
2010	• Invested in Epyon Power, a supplier of fast-charging technology. • Completed the world's first Optoelectronic Semiconductor Carbon Footprint and Type III Environmental Product Declarations.
2011	Completed the world's first Product Category Rules for Circuit Boards.
2013	Acquired Power Innovations (US), strengthening cloud and power management capabilities.
2014	Selected for the Carbon Disclosure Project's Climate Disclosure Leadership Index.
2016	Opened a new operations center in Kaohsiung's Nanzih Export Processing Zone.
2018	Divested the mobile camera module and mechanical business to focus resources.
2019	Acquired 100% of LOJ via tender offer.
2020	• Launched succession plan: Tom Soong named as Chairman, Anson Chiu named as President. • Completed sale of the SSD business to KIOXIA Holdings.
2021	• Launched an Employee Stock Ownership Trust (ESOT). • Joined the O-RAN Alliance and launched 5G small cells.
2022	• Began reconstructing the Zhonghe office into the "LITEON Zhonghe Digitech Center." • Inaugurated Phase II of the LITEON Vietnam plant in Haiphong.
2023	Opened its first corporate store, 'LITEON Collection,' in Neihu Science Park.
2024	• Took a 19.99% strategic stake in COSEL. • Broke ground on a new low-carbon building in Kaohsiung.
2025	• Returned to COMPUTEX with next-gen AI solutions, winning the Sustainable Design Award (Bronze). • Reopened its founding Zhonghe headquarters after a three-year reconstruction.

Product offerings

Lite-On's key offerings can be categorized into six key areas: Optoelectronic Semiconductors, Energy Management, Consumer Electronics, Networking and Surveillance, Automotive Electronics, and Roadway Intellimation System.

1. Optoelectronic semiconductors

Its product portfolio spans a broad technological range, encompassing illumination and sensing applications, low- to high-power devices, standard and custom-made solutions, and components ranging from LEDs to lasers and from visible light to infrared and ultraviolet spectra.

Exhibit 144: Lite-on: Offerings for optoelectronic semiconductors

Optoelectronic Semiconductors						
Visible, UV & Automotive LEDs				Couplers	Optical Sensors	IR Emitters & Detectors
Illumination / UV-C / Automotive				Isolation & Signal Transfer	Ambient / Proximity / Gesture	Infrared Sensing
Automotive LED	SMD LED	Flash LED	UV LED	Photocouplers	Optical Sensors	IR Emitters & Detectors

Source: Company data, Morgan Stanley Research

2. Energy management

The product range serves the communications, industrial automation, smart home, medical, office, and automotive electronics industries. It offers a comprehensive suite of platinum- to titanium-efficiency-grade power supplies (CRPS, GPU, and SLIM series) suitable for both standard and AI servers, supporting AC or DC input with high power density, high reliability, and modular scalability. Power-shelf and battery-backup-unit (BBU) solutions, along with rack-cooling and liquid-cooling technologies for data centers, cloud infrastructure, and AI/machine-learning platforms, are also included in this segment.

Server Power Networking Power Open Compute Project	Server Rack Server Chassis	POE Injector Industrial Power Adapter LED Driver	Magnetic Components

Source: Company data, Morgan Stanley Research

3. Consumer electronics

This segment is committed to advancing home entertainment and office solutions through feature-rich product design intended to enhance the overall user experience. Offerings include office/gaming solutions, laptop keyboard modules and touchpads, laptop power adapters, USB Type-C/PD chargers, etc.

Source: Company data, Morgan Stanley Research

5. Automotive electronics

Lite-On is able to leverage its core competencies in optoelectronics and power management, along with more than four decades of expertise in automotive electronics. This segment is dedicated to advancing vehicle-charging technology, ADAS (Advanced Driver Assistance Systems) solutions, and automotive lighting modules through high-end engineering. AC charging solutions are offered across multiple current ratings (32/40A, 48A, 80A, and an EU-specific variant), while DC charging solutions include a 30kW fast-charging offering.

Exhibit 148: Lite-on: Offerings for automotive electronics

6. Roadway Intellimation System

This segment is mainly operated under the LEOTEK brand, a subsidiary of the LITEON Technology Group with dual headquarters in Silicon Valley and Taipei. It has served road infrastructure across more than 30 countries—including North America, Europe, the Middle East, and the Asia-Pacific region—since 1992. The segment comprises intelligent roadway lighting, traffic signal systems, and AI-driven predictive maintenance solutions, all developed to support smarter and more efficient road infrastructure.

Valuation Methodology and Risks

Panasonic Holdings (6752.T)

Our target price is based on P/E 19.5x our FY3/28 EPS forecast.

We apply: 36x to EPS generated by AI infrastructure-related businesses, 5x to EPS attributable to IRA subsidies in the automotive battery business, and 13.5x to EPS from all other businesses.

Risks to Upside

- Acceleration of restructuring and exit/scale-down of unprofitable businesses
- Stronger than expected growth of datacenter BBU, automotive battery business

Risks to Downside

- Deteriorating visibility for energy business
- Expectations for business portfolio revisions sink

Important Regulatory Disclosures on Subject Companies

As of August 31, 2026, Morgan Stanley beneficially owned 1% or more of a class of common equity securities of the following companies covered in Morgan Stanley Research: AAC Technologies Holdings, Accelink Technologies Co. Ltd., Acer Inc., AirTAC International, Auras Technology Co Ltd, Bizlink, Catcher Technology, Chenbro, Co-Tech Development Corp., Compal Electronics, Delta Electronics Inc., E Ink Holdings Inc., Elite Material Co., Eoptolink Technology Inc Ltd, Genius Electronic Optical Co. Ltd., Giga-Byte Technology Co. Ltd., Gold Circuit Electronics Ltd., Hiwin Technologies Corp., LandMark Optoelectronics Corporation, Largan Precision, Lens Technology, LianChuang Electronic Technology Co Ltd, Lingyi Itech Guangdong Co, Lite-On Technology, Lotes Co. Ltd., Nan Ya PCB, OFILM Group Co Ltd, Panasonic Holdings, Quanta Computer Inc., Sunny Optical, Suzhou TFC Optical Communication Co Ltd., Taiwan Union Technology Corporation, Unimicron, Visual Photonics Epitaxy Co Ltd, Wistron Corporation, Wiwynn Corp, Xiaomi Corp, Yageo Corp., Yangtze Optical Fibre and Cable JSC Ltd, Zhejiang Crystal-Optech Co Ltd, Zhen Ding, Zhongji Innolight Co Ltd.

Within the last 12 months, Morgan Stanley managed or co-managed a public offering (or 144A offering) of securities of Asustek Computer Inc., Panasonic Holdings, Unimicron, Wistron Corporation, Wiwynn Corp, Zhen Ding, Zhongji Innolight Co Ltd.

Within the last 12 months, Morgan Stanley has received compensation for investment banking services from Asustek Computer Inc., Lenovo, Panasonic Holdings, Unimicron, Wistron Corporation, Wiwynn Corp, Xiaomi Corp, Yageo Corp., Zhen Ding, Zhongji Innolight Co Ltd.

In the next 3 months, Morgan Stanley expects to receive or intends to seek compensation for investment banking services from AAC Technologies Holdings, Accton Technology Corporation, Acer Inc., Advantech, AirTAC International, Asustek Computer Inc., AU Optronics, Bizlink, Catcher Technology, Chenbro, Compal Electronics, Delta Electronics Inc., E Ink Holdings Inc., Elite Material Co., Ennostar Inc, Eoptolink Technology Inc Ltd, Giga-Byte Technology Co. Ltd., Gold Circuit Electronics Ltd., Hon Hai Precision, Innolux, Lenovo, Lens Technology, Lingyi Itech Guangdong Co, Lite-On Technology, Lotes Co. Ltd., Luxshare Precision Industry Co., Ltd., Panasonic Holdings, Pegatron Corporation, Q Technology (Group) Company Ltd, Quanta Computer Inc., Shanghai Conant Optical Co Ltd, Shenzhen Transsion Holdings Co Ltd, Suzhou TFC Optical Communication Co Ltd., TCL Corp., Unimicron, Wistron Corporation, Wiwynn Corp, Xiaomi Corp, Yageo Corp., Yangtze Optical Fibre and Cable JSC Ltd, Zhen Ding, Zhongji Innolight Co Ltd.

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from AAC Technologies Holdings, Accton Technology Corporation, Acer Inc., Asustek Computer Inc., AU Optronics, BYD Electronics, Compal Electronics, E Ink Holdings Inc., Eoptolink Technology Inc Ltd, Giga-Byte Technology Co. Ltd., GoerTek Inc, Hon Hai Precision, Innolux, Lenovo, Lingyi Itech Guangdong Co, Panasonic Holdings, Quanta Computer Inc., Xiaomi Corp, Yageo Corp..

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: AAC Technologies Holdings, Accton Technology Corporation, Acer Inc., Advantech, AirTAC International, Asustek Computer Inc., AU Optronics, Bizlink, Catcher Technology, Chenbro, Compal Electronics, Delta Electronics Inc., E Ink Holdings Inc., Elite Material Co., Ennostar Inc, Eoptolink Technology Inc Ltd, Giga-Byte Technology Co. Ltd., Gold Circuit Electronics Ltd., Hon Hai Precision, Innolux, Lenovo, Lens Technology, Lingyi Itech Guangdong Co, Lite-On Technology, Lotes Co. Ltd., Luxshare Precision Industry Co., Ltd., Panasonic Holdings, Pegatron Corporation, Q Technology (Group) Company Ltd, Quanta Computer Inc., Shanghai Conant Optical Co Ltd, Shenzhen Transsion Holdings Co Ltd, Suzhou TFC Optical Communication Co Ltd., TCL Corp., Unimicron, Wistron Corporation, Wiwynn Corp, Xiaomi Corp, Yageo Corp., Yangtze Optical Fibre and Cable JSC Ltd, Zhen Ding, Zhongji Innolight Co Ltd.

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: AAC Technologies Holdings, Accton Technology Corporation, Acer Inc., Asustek Computer Inc., AU Optronics, BYD Electronics, Compal Electronics, E Ink Holdings Inc., Eoptolink Technology Inc Ltd, Giga-Byte Technology Co. Ltd., GoerTek Inc, Hon Hai Precision, Innolux, Lenovo, Lingyi Itech Guangdong Co, Panasonic Holdings, Quanta Computer Inc., Xiaomi Corp, Yageo Corp., Zhen Ding.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality

of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.
Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.
Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of September 30, 2026)
The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.
For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

	Coverage Universe		Investment Banking Clients (IBC)			Other Material Investment Services Clients (MISC)	
Stock Rating Category	Count	% of Total	Count	% of Total IBC	% of Rating Category	Count	% of Total Other MISC
Overweight/Buy	1599	43%	455	48%	28%	783	44%
Equal-weight/Hold	1563	42%	394	42%	25%	763	43%
Not-Rated/Hold	2	0%	1	0%	50%	1	0%
Underweight/Sell	570	15%	96	10%	17%	227	13%
Total	3,734		946			1774	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.
Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.
In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.
Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.
Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

Effective January 13, 2014, the industry view benchmarks for Morgan Stanley Asia Pacific are as follows: relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

Important Disclosures for Morgan Stanley Smith Barney LLC Customers

Important disclosures regarding any material conflict of interest that can reasonably be expected to have influenced Morgan Stanley Smith Barney LLC's choice of a third-party research provider or the subject company of a third-party research report, are available on the Morgan Stanley Wealth Management disclosure website at www.morganstanley.com/online/researchdisclosures. For Morgan Stanley specific disclosures, you may refer to https://www.morganstanley.com/eqr/disclosures/webapp/generalresearch.

Each Morgan Stanley research report is reviewed and approved on behalf of Morgan Stanley Smith Barney LLC. This review and approval is conducted by the same person who reviews the research report on behalf of Morgan Stanley. This could create a conflict of interest.

Other Important Disclosures

Morgan Stanley Research policy is to update research reports as and when the Research Analyst and Research Management deem appropriate, based on developments with the issuer, the sector, or the market that may have a material impact on the research views or opinions stated therein. In addition, certain Research publications are intended to be updated on a regular periodic basis (weekly/monthly/quarterly/annual) and will ordinarily be updated with that frequency, unless the Research Analyst and Research Management determine that a different publication schedule is appropriate based on current conditions.

Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley produces an equity research product called a "Tactical Idea." Views contained in a "Tactical Idea" on a particular stock may be contrary to the recommendations or views expressed in research on the same stock. This may be the result of differing time horizons, methodologies, market events, or other factors. For all research available on a particular stock, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Morgan Stanley Research is provided to our clients through our proprietary research portal on Matrix and also distributed electronically by Morgan Stanley to clients. Certain, but not all, Morgan Stanley Research products are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience. For access to all available Morgan Stanley Research, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Any access and/or use of Morgan Stanley Research is subject to Morgan Stanley's Terms of Use (http://www.morganstanley.com/terms.html). By accessing and/or using Morgan Stanley Research, you are indicating that you have read and agree to be bound by our Terms of Use (http://www.morganstanley.com/terms.html). In addition you consent to Morgan Stanley processing your personal data and using cookies in accordance with our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html), including for the purposes of setting your preferences and to collect readership data so that we can deliver better and more personalized service and products to you. To find out more information about how Morgan Stanley processes personal data, how we use cookies and how to reject cookies see our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html). Please use the provided link to review the Terms and Conditions and Most Important Terms and Conditions for Morgan Stanley India Company Private Limited (https://www.morganstanley.com/assets/pdfs/about-us-global-offices/india/Terms_and_conditions.pdf) and the following link to review the audit report (https://ny.matrix.ms.com/eqr/research/webapp/researchdocs/MSICPL_Morgan_Stanley_Research_Audit_Report.pdf).

If you do not agree to our Terms of Use and/or if you do not wish to provide your consent to Morgan Stanley processing your personal data or using cookies please do not access our research. Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those

who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.

Certain information in Morgan Stanley Research was sourced by employees of the Shanghai Representative Office of Morgan Stanley Asia Limited for the use of Morgan Stanley Asia Limited. Morgan Stanley is not incorporated under PRC law and the research in relation to this report is conducted outside the PRC. Morgan Stanley Research does not constitute an offer to sell or the solicitation of an offer to buy any securities in the PRC. PRC investors shall have the relevant qualifications to invest in such securities and shall be responsible for obtaining all relevant approvals, licenses, verifications and/or registrations from the relevant governmental authorities themselves. Neither this report nor any part of it is intended as, or shall constitute, provision of any consultancy or advisory service of securities investment as defined under PRC law. Such information is provided for your reference only.
