Summary: During Computex 2026, we arranged booth tours for our investors with representatives of companies within our coverage, including Wiwynn, Aspeed, Delta, Hon Hai, and Chenbro, alongside several other companies. In conjunction with keynote addresses delivered by leading global technology companies, we believe the primary focus of Computex 2026 remained centered on the CPU domain - specifically, the role of CPUs in orchestrating the broader ecosystem for agentic AI, as well as the emerging total addressable market (TAM) arising from AI PCs incorporating NVIDIA's Spark chipset. Across the booths we visited, the majority of vendors showcased components and solutions applicable to NVIDIA's Vera Rubin generation platform. These demonstrations should be regarded as indicative of trial production activity within the Taiwan supply chain ahead of the official volume ramp, which is anticipated to commence in 4Q26, with the underlying concepts having been primarily introduced at GTC. With respect to key technology transitions, the developments that garnered the most attention at the conference included CPO-based AI server architecture, Co-Packaging Connectors (CPC), High-Voltage Direct Current (HVDC) power delivery, and microgrid solutions. In conclusion, we encourage investors to maintain a sustained focus on CPU-related investment themes, as well as on specification upgrades driven primarily by escalating high-speed transmission requirements. Our key Buy ideas include: Aspeed, Lotes (3533 TT, TWD2,400), Wiwynn, Delta, TUC (6274 TT, TWD1,695), EMC (2383 TT, TWD4,830), and Accton (2345 TT, TWD2,510).

Wiwynn (6669 TT, TWD5,570, Buy [1])

- According to investor feedback, Wiwynn's booth was widely regarded as one of the most compelling exhibitions at Computex, owing to its demonstration of a Co-Packaged Optics (CPO) computing rack. The demonstration was developed in collaboration with several key partners, including Ayar Labs - contributing the optical engine and External Laser Small Form Factor Pluggable (ELSFP) technology - and GUC (3443 TT TWD4,400, Hold [3], covered by Rick Hsu), contributing the XPU. It is our understanding that the demonstration remains under development, and the collaboration with Ayar Labs is currently in a pilot stage. Wiwynn's objective is to ensure that it acquires the requisite capabilities and expertise ahead of CPO technology reaching broader commercial maturity. Based on our observations, Wiwynn's focus appears to be concentrated on computing tray development, while the scale-out and scale-up switch racks are expected to be contributed by other partners.
- Another notable highlight from Wiwynn's exhibition was its demonstration of AMD's Helios platform. Based on our understanding, AMD's Helios architecture would comprise 18 computing units, each configured with four GPUs and one CPU per rack. Given the physical dimensions of AMD's MI450 series GPU and connectivity speed requirements, the GPU layout is positioned at the bottom of the PCB in order to optimize connectivity with the scale-up system. According to Wiwynn, the Helios platform will leverage UALink for scale-up interconnects, while adopting Ethernet for scale-out connectivity (implementing UALink over Ethernet).

Aspeed (5274 TT, TWD18,265, Buy [1])

- At Computex 2026, Aspeed's showcase highlighted its evolution from a pure Baseboard Management Controller (BMC) supplier toward a broader platform management and

- infrastructure control provider. The company demonstrated solutions spanning BMC, Satellite Management Controller (SMC, or mini-BMC), I/O expansion, and security IC.
- A key emphasis at Aspeed's booth was the company's adoption of RISC-V architecture and OCP open-source frameworks to support Caliptra — an IP designed to execute root-of-trust functions. This security enhancement is expected to be implemented across the majority of Aspeed's product lines, thereby elevating the overall security standard of its devices.
 - Another significant highlight was the introduction of the AST1840, succeeding the previous AST1800. The AST1700/1800/1840 series constitutes Aspeed's I/O expander product line, with the AST1800 marking the first edition to incorporate an embedded FPGA within the I/O expander. With the AST1840, Aspeed has transitioned to outsourcing the FPGA chip from Lattice Semiconductor, resulting in the development of a new System-on-Chip (SoC) for the AST1840.
 - Regarding the near-term outlook, following the company's revenue guidance of TWD4.1-4.3 billion, we anticipate an additional revenue step-up from 4Q26, as Aspeed has qualified with a second OSAT partner, enabling broader support from substrate vendors. With respect to the T-glass to E-glass substrate certification, we expect the transition to be completed successfully; however, the initial production batch of the AST2700 will incorporate substrates containing both T-glass and E-glass. Over the longer term, only the E-glass substrate version is expected to remain in production.
 - The company expressed a continued positive outlook on CPU server demand, driven by the growth of agentic AI workloads. According to Aspeed's latest forecast, BMC unit shipments are projected to reach approximately 8.5 million units in 2026. Looking ahead to 2027, we think BMC shipments from the conventional server segment will grow by at least 30% year-over-year.

Delta Electronics (2308 TT, TWD2,425, Buy [1])

- Delta's Computex 2026 showcase its strategy of extending from power and thermal components into broader AI datacentre infrastructure. Delta highlighted five main exhibition areas: modular datacentre, micro grid solutions, HVDC solutions, Vera Rubin solutions, and Edge AI. We believe the key investment implication is that Delta is positioning itself not only as a supplier of power supplies and cooling components, but also as an infrastructure partner spanning power conversion.
- 800VDC remains the core product direction. Delta's key AI datacentre message is built around 800VDC architecture. Its showcase included an 800VDC in-row power system, 90kW DC-DC power shelf, 110kW AC-DC power shelf, 12kW power distribution board, and DC-DC conversion modules. The 800VDC in-row power system is designed to simplify the power conversion architecture and achieve over 98% system efficiency, while also integrating 480kW of total BBU for short-duration support to critical loads. We see this as the next step in Delta's power roadmap as AI rack power emerge.
- Micro-grid is becoming the next key question from investors on top of HVDC, while SST and SOFC becomes the key discussion. However, these new growth drivers likely won't bear fruit in just 1-2 years. The microgrid solution integrates renewables, energy storage, fuel cells and other power sources to support datacentre operation in grid-connected and off-grid modes. Delta's solid-state transformer (SST) can directly convert medium-voltage AC to low-voltage 800VDC, with high power density and modular design to reduce footprint and power losses. The SOFC fuel cell offers 60% generation efficiency and 24-hour stable power supply with modular expansion. We see SST and SOFC as strategic long-term options tied to AI datacentre power trend, while the nearer-term investment focus remains 800VDC power racks, power shelves, distribution boards, BBU, and liquid cooling.

Hon Hai (2317 TT, TWD293.0, Buy [1])

- As one of NVIDIA's key strategic partners, Hon Hai presented its comprehensive lineup of NVIDIA AI servers at Computex. Notably, the Vera CPU rack and CPO switch were absent from the exhibition. Hon Hai's demonstration included new computing trays and switches for the VR200, as well as the HGX NVL8 — a new HGX configuration featuring eight GPUs, dual x86 CPUs, and integrated liquid-cooling components. The compact design of the NVL8 enables a reduced form factor of 2U (with a 1U height of 45mm).
- In addition, Hon Hai showcased its Co-Packaging Connector (CPC), designed for integration into switches such as the Spectrum-X. Based on our understanding, Hon Hai/FIT is capable of delivering 224 Gbps per lane, achieving an aggregate throughput of 12.8 Tbps per connector. We believe that at least two clients are currently evaluating the adoption of this CPC technology.
- From FIT's perspective, the company also presented its Paladin connector, intended for use within the mid-plane of the computing tray. This connector, along with the mid-plane, is expected to serve as a key replacement for Amphenol's flyover cable. We believe FIT is actively developing a next-generation connector solution to be deployed within the Kyber architecture, where the mid-plane will serve as the interconnect between both the computing and switch trays.

Chenbro (8210 TT, TWD1,420, Buy [1])

- As an established rack vendor on NVIDIA's Reference Vendor List (RVL), Chenbro showcased several rack solutions compatible with NVIDIA's VR NVL72 at the exhibition.
- We understand that Chenbro is currently engaged in multiple new rack projects, encompassing noise-cancellation chassis, IT racks for NVIDIA/AMD, liquid-cooling racks (including CDU racks in both Liquid-to-Liquid and Liquid-to-Air configurations), and switch racks. This strategic expansion underscores Chenbro's transition from a chassis vendor to a full-scale rack vendor, reflecting the broader industry shift whereby end customers are increasingly designing their infrastructure at the rack level rather than the chassis level.
- We anticipate that the margin profile for rack solutions will reach c.25-30%, compared to our previous estimate of c.15-20%, driven by the significant degree of customization involved. Consequently, our revised long-term gross margin forecast has been lifted from 25-26% to 28-29%.
- During the booth tour, Chenbro emphasized its enhanced development cycle, which is designed to further reduce time-to-market for its clients. The company also highlighted its diversified development teams - comprising software engineers, industrial designers, mechanical engineers, and other specialists - to provide comprehensive support to end customers. We believe Chenbro's role is a key co-design and the most fast partner for its end customers, making it a critical differentiator from its competitors and mitigating the impact of competitive pressures.

In the interests of timeliness, this document has not been edited.

Important Disclosures and Disclaimer

Research Analyst Conflicts

For updates on "Research Analyst Conflicts" please visit BlueMatrix disclosure link at <https://daiwa3.bluematrix.com/sellside/Disclosures.action>. The principal research analysts who prepared this report have no financial interest in securities of the issuers covered in the report, are not (nor are any members of their household) an officer, director or advisory board member of the issuer(s) covered in the report, and are not aware of any material relevant conflict of interest involving the analyst or DCMA, and did not receive any compensation from the issuer during the past 12 months except as noted: no exceptions.

Research Analyst Certification

For updates on "Research Analyst Certification" and "Rating System" please visit BlueMatrix disclosure link at <https://daiwa3.bluematrix.com/sellside/Disclosures.action>. The views about any and all of the subject securities and issuers expressed in this Research Report accurately reflect the personal views of the research analyst(s) primarily responsible for this report (or the views of the firm producing the report if no individual analyst is named on the report); and no part of the compensation of such analyst (or no part of the compensation of the firm if no individual analyst is named on the report) was, is, or will be directly or indirectly related to the specific recommendations or views contained in this Research Report.

The following explains the rating system in the report as compared to relevant local indices, unless otherwise stated, based on the beliefs of the author of the report.

- "1": the security could outperform the local index by more than 15% over the next 12 months.
- "2": the security is expected to outperform the local index by 5-15% over the next 12 months.
- "3": the security is expected to perform within 5% of the local index (better or worse) over the next 12 months.
- "4": the security is expected to underperform the local index by 5-15% over the next 12 months.
- "5": the security could underperform the local index by more than 15% over the next 12 months.

Japan - Notification items pursuant to Article 37 of the Financial Instruments and Exchange Law

(This Notification is only applicable to where report is distributed by Daiwa Securities Co. Ltd.)

If you decide to enter into a business arrangement with our company based on the information described in this report, we ask you to pay close attention to the following items.

- In addition to the purchase price of a financial instrument, our company will collect a trading commission* for each transaction as agreed beforehand with you. Since commissions may be included in the purchase price or may not be charged for certain transactions, we recommend that you confirm the commission for each transaction. In some cases, our company also may charge a maximum of ¥2 million per year as a standing proxy fee for our deposit of your securities, if you are a non-resident.

- For derivative and margin transactions etc., our company may require collateral or margin requirements in accordance with an agreement made beforehand with you. Ordinarily in such cases, the amount of the transaction will be in excess of the required collateral or margin requirements**.
 - There is a risk that you will incur losses on your transactions due to changes in the market price of financial instruments based on fluctuations in interest rates, exchange rates, stock prices, real estate prices, commodity prices, and others. In addition, depending on the content of the transaction, the loss could exceed the amount of the collateral or margin requirements.
 - There may be a difference between bid price etc. and ask price etc. of OTC derivatives handled by our company.
 - Before engaging in any trading, please thoroughly confirm accounting and tax treatments regarding your trading in financial instruments with such experts as certified public accountants.
- * The amount of the trading commission cannot be stated here in advance because it will be determined between our company and you based on current market conditions and the content of each transaction etc.
- ** The ratio of margin requirements etc. to the amount of the transaction cannot be stated here in advance because it will be determined between our company and you based on current market conditions and the content of each transaction etc.

When making an actual transaction, please be sure to carefully read the materials presented to you prior to the execution of agreement, and to take responsibility for your own decisions regarding the signing of the agreement with our company.
