U.S. Economic Outlook: July 2026

Key Themes

- **The U.S. economy remains resilient but is unlikely to accelerate in the second half of the year.** AI-related capex shows few signs of slowing, but its direct boost to growth continues to be partially offset by the surge in tech imports. The AI buildout has been indirectly supporting consumer spending through stronger household balance sheets, but consumption growth is unlikely to pick up meaningfully in the near term as support from tax refunds fade, real income growth remains soft, and the saving rate sits at a multi-year low. We look for real U.S. GDP to advance at a 2.1% annualized rate in the second half of 2026, broadly in line with the 2.2% year-over-year rate we estimate was registered through Q2.
- **The labor market is stable, not heating up.** The June employment report revealed a cooler pace of job growth, with the three-month average pace of payrolls downshifting to 111K from 188K previously. And while the unemployment rate edged down last month, it stemmed from more workers leaving the labor force. We look for the jobs market to remain roughly in balance through the second half of the year, with unemployment hovering near its current rate of 4.2%.
- **Inflation remains the rub, although June data buys the Fed more time to assess the outlook.** At 3.4%, the year-over-year rate of core PCE is at a two-and-a-half-year high. The pickup primarily reflects tariffs, the knock-on effects of higher oil prices, and surging demand for tech-related goods—the latter of which Fed officials seem to have a harder time looking through. But, the upturn in inflation showed hints of leveling off in June. The latest CPI and PPI data point to core PCE rising just 0.2% in June, which would be the smallest monthly gain this year and would push the 12-month change down to 3.3%.
- **The Fed has turned more hawkish.** While we do not believe monetary policy is well-equipped to rein in the factors currently driving inflation higher, patience for returning inflation to 2% is clearly wearing thin at the Fed. Chair Warsh has been careful not to signal where he thinks policy is headed in the coming months. Yet, June's evenly-divided dot plot, the latest meeting minutes, and recent comments from Committee bellwethers John Williams and Chris Waller suggest the bar for hiking rates is lower than it was a few months ago.
- **Our base case remains for the FOMC to stay on hold this year, but the potential for hikes is high.** With the tariff shock fading and services inflation continuing to slow, we expect inflation to make some directional, if modest, progress in the second half of the year. We estimate core PCE will edge down to 3.2% on a Q4/Q4 basis, which would be consistent with prices rising a little less than a 3% annualized rate in the second half of the year. That said, renewed hostilities in the Middle East, unrelenting demand for all things AI, and an increasingly impatient FOMC create the risk that the Committee engages in a modest tightening cycle in the months ahead. With the FOMC already on the fence between holding and hiking, even a small upward adjustment to the inflation outlook would likely lead the FOMC to reverse some of last year's cuts.

Sector Analysis

Personal Consumption Expenditures (PCE)

- The consumer is still in the game, but with a thin savings buffer and soft income growth, real PCE growth this year looks to have a top speed in the neighborhood of just 2.5%.

The latest personal income and spending report offered some relief on the health of the consumer. Both spending and income rose in May, marking a clear improvement from the prior month. After factoring in revisions, the saving rate remains low but looks less dire than it did a month ago. It's still sitting near the low end of the range for the past 20 years, suggesting consumer resilience is on shaky footing. This is also evident in spending data, where consumers are making tough choices in recent months by slowing discretionary spending to stay within budget. On the goods side, retail sales were better than expected in June aside from a price-related decline at gas stations. Core sales posted a respectable gain in June and are now tracking at a roughly 5.5% annualized pace for Q2. On the income side, the picture remains soft: real disposable income retraced some of April's drop in May, but has declined at a 0.4% annualized rate the past three months. We expect real spending to come in at 2.2% in Q2 and sustain a roughly 2-2.5% pace this year, with downside risk if income growth fails to stabilize.

Investment: Equipment, Intellectual Property Products, and Inventories

- The AI buildout is still the main factor driving business spending, but in the shadow of that larger dynamic, the incipient rebound in broader capex remains intact.

Investment spending is on track to deliver another surge in software and tech-related equipment in Q2 and another outsized contribution to overall GDP growth as firms continue to prioritize the AI buildout. Activity is also continuing to broaden across manufacturing, with the ISM manufacturing index sitting near a 4-four-year high and durable goods orders firming across most industries (a headline decline in May durables was almost entirely a function of a pullback in civilian aircraft orders). Renewed conflict in Iran means cost uncertainty is not going away, but momentum in equipment spending remains intact.

Investment: Residential

- We have not made major changes to our outlook for residential investment. Residential spending is poised for further near-term weakness, largely due to a reduced pace of new construction.

Residential investment looks set to remain on a downward trajectory this year. With mortgage rates stuck around 6.5% and new for-sale inventory continuing to climb, builders appear to be scaling back new home construction. Builder incentives will continue as a support for sales. However, we expect mortgage rates to decline only modestly over the next several quarters, keeping the affordability constraint in place. Similarly, we look for elevated financing costs to remain a limitation for existing home sales, though low resale supply should continue to keep a floor under existing home

prices. Meanwhile, although challenging affordability looks set to boost rental demand, multifamily construction will likely remain under pressure amid elevated materials costs, high capital costs and soft apartment market conditions.

Investment: Nonresidential Structures

- Nonresidential structures investment continues to taper under high interest rates. We expect elevated costs and a reduced pace of groundbreakings to suppress spending during the next few quarters.

Structures investment remains weak. While spending on data centers and power structures is resilient, the ongoing decline in manufacturing, office, warehousing and other commercial construction is the larger force at present. Furthermore, higher interest rates and materials costs appear to be keeping a lid on new project starts, which will preclude a meaningful rise in construction this year. Higher oil prices have sparked a modest uptick in active rotary rigs over the past several months, indicating incremental growth in energy-related structures investment is ahead. That said, expectations for lower oil prices over the next several years suggests a significant break-out in activity is unlikely.

Net Exports & Trade

- We've downwardly revised our net exports expectation and look for a widening in the Q2 deficit large enough to shave about a full percentage point off of real GDP growth.

Trade flows remain volatile, but the recent deterioration in the deficit can almost entirely be explained by the surge in high-tech related imports. Just five categories of trade (computers, computer accessories, semiconductors, telecommunications equipment and related electrical apparatus) make up three quarters of the deficit today as the race to build AI capacity causes imports of these goods to far outpace other goods. AI-related demand should keep the deficit wide in coming months, as will a potential pull-forward in demand for imported product as businesses stock up ahead of potential tariff increases in August. Recent reprieve on the tariff front with IEEPA refunds and the move lower in the average effective rate is fleeting as we expect expiring Section 122 rates to be 'replaced' with tariffs under other authorities. In other words, tariff rates should remain roughly where they are now.

Labor Market

- We have made no material changes to our labor market forecast. We expect the job market to remain broadly stable, with payroll growth averaging ~80K per month and the unemployment rate holding near 4.2% for the remainder of the year.

Recent employment reports reinforce our view that the labor market is largely holding steady rather than reheating. Job openings have not shown convincing improvement and small business hiring plans have pulled back since the start of the year. Initial jobless claims remain low, suggesting layoffs are not broad-based. The unemployment rate unexpectedly declined in June, but the drop was driven

by a pullback in labor force participation rather than a stronger pace of hiring. Reflecting the lower starting point, we modestly lowered our unemployment rate forecast and now expect it to remain at 4.2% through year-end. While the decline in unemployment did not occur for the “right” reasons, the sideways move in the unemployment rate signals that labor demand and supply are roughly in balance.

Inflation

- We continue to expect core PCE inflation to end 2026 at 3.2% on a Q4/Q4 basis.

While the latest CPI and PPI data hint at a cooling inflation backdrop, several supply-side factors are likely to keep inflation elevated. The recent rebound in oil prices comes as earlier increases in energy and transportation costs are still working their way through supply chains. Meantime, robust demand tied to the AI build-out has put upward pressure on computer software & accessories prices, a category with a larger weight in the PCE than in the CPI. Prices for many tariff-sensitive goods have declined in recent months, but we do not expect the pace of decline to persist as the effects of the initial tariff shock fade. Shelter inflation continues to cool, although the scope for further moderation is diminishing in this category too. Taken together, inflation pressures remain largely confined to a handful of categories experiencing various forms of shocks, which will make it hard for material progress in lowering inflation to resume in the near term.

Fiscal Policy

- Our FY 2026 and FY 2027 budget deficit forecasts are essentially unchanged at \$1.98 trillion (6.1% of GDP) and \$2.0 trillion (5.9% of GDP), respectively.
- Federal employment cuts seem to be winding down: federal government payroll growth has averaged +1K over the past three months, the first time this measure has been positive during Trump 2.0. We expect this pace of very modest growth to continue in the months ahead.

Chatter has picked up about a possible budget reconciliation "3.0." As a reminder, budget reconciliation is the privileged Congressional process by which the Senate filibuster can be circumvented for certain budget-related bills. As we wrote in a report earlier this year, we are skeptical that another stimulative budget reconciliation bill is going to become law in this Congress. If one does become law, we doubt it will be as big or as macroeconomically meaningful as the One Big Beautiful Bill Act from last year. We suspect the fiscal portion would be limited in scope, with a modest boost to defense spending, possibly a bit more here and there on spending cuts/increases, and not much else.

We also have started to get questions about the debt ceiling outlook. It is still very early in this process, but based on what we know now, our projections show the debt ceiling being hit sometime in the February/March 2027 window, with the "X date", i.e., the date on which Treasury would be unable to meet all of its obligations in full unless the debt ceiling was raised or suspended, probably falling sometime in the fourth quarter of next year.

Monetary Policy & Interest Rates

- Our fed funds forecast remains unchanged, as we continue to look for the FOMC to keep the fed funds rate steady through year-end 2027 at 3.50%-3.75%. Our forecasts for the 10-year Treasury yield at year-end 2026 and 2027 are also unchanged at 4.35% and 4.30%, respectively.

Fed communication has made clear that the bar to hike rates is not high. Governor Waller's [speech on July 14](#) revealed that he wants to see "several months of lower readings to feel that inflation is moving in the right direction." But, not all the heavy hitters at the Fed sound as hawkish: FRBNY President John Williams continues to [characterize policy](#) as "well positioned" to bring inflation back to 2%.

If the worst of the energy and tariff supply shocks are truly behind us (a big if, we know), and if the labor market is not overheating (we don't think it is), we think there is a path for the Fed to remain patient, keep the policy rate unchanged, and await softer inflation readings in the months ahead. Accordingly, we look for the yield curve to bull steepen modestly as the market's rate hike expectations are slowly dialed back in the month ahead.

International Developments

- We have raised our global GDP growth forecast to 2.7% this year, and have trimmed our global CPI inflation forecast by two-tenths to 4.3% to reflect a modestly lower average oil price path.

The conflict in the Middle East continues to be a large driver of global growth trends, though headwinds from the conflict are being partially offset by resilient AI-driven activity, namely in the U.S., Australia and Japan, causing us to modestly lift our growth profile for this year and next. At the same time, even as prices remain volatile and well above pre-war levels, we look for global inflation to recede in coming months and average 3.8% in 2027.

Central banks are attempting to look through the supply-driven inflation shock, aiming to maintain, rather than add to, policy restriction amid lingering growth concerns and existing slack that should help to keep price pressures from becoming entrenched. In some cases that still implies nominal rate increases to preserve broadly steady real rates. We expect final hikes from the European Central Bank, the Reserve Bank of Australia and the Bank of Japan, and potentially the start of a short hiking cycle from the Bank of England, where the Ofgem price cap has delayed some of the pass-through of the recent spike in energy prices. Others, like the Bank of Canada, however, are more likely to hold rates steady as they determine whether commodity-driven price increases begin to feed more meaningfully into underlying inflation.

Among emerging market economies, policy is more divergent. We expect further easing from the People's Bank of China as domestic demand remains soft, Brazil's central bank to continue cutting as inflation moderates, tightening from the Reserve Bank of India and Banxico to remain on hold.

Required Disclosures

This report is produced by the Economics Group of Wells Fargo Securities, LLC ("Wells Fargo Securities"). This report is not a product of Wells Fargo Global Research and the information contained in this report is not financial research. Wells Fargo Securities distributes this report directly and through affiliates including, but not limited to, Wells Fargo & Company, Wells Fargo Bank, N.A., Wells Fargo Clearing Services, LLC, Wells Fargo Securities International Limited, Wells Fargo Securities Europe S.A., and Wells Fargo Securities Canada, Ltd. Wells Fargo Securities, LLC is registered with the Commodity Futures Trading Commission as a futures commission merchant and is a member in good standing of the National Futures Association. WFBNA is registered with the Commodity Futures Trading Commission as a swap dealer and is a member in good standing of the National Futures Association. Wells Fargo Securities, LLC and WFBNA are generally engaged in the trading of futures and derivative products, any of which may be discussed within this report. All reports published by the Economics Group are disseminated and available to all clients simultaneously through electronic publication to our internal client website. Clients may also receive our reports via third party vendors. We are not responsible for the redistribution of our reports by third-party aggregators. Any external website links included in this report are not maintained, controlled or operated by Wells Fargo Securities. Wells Fargo Securities does not provide the products and services on these websites and the views expressed on these websites do not necessarily represent those of Wells Fargo Securities.

This publication has been prepared for informational purposes only and is not intended as a recommendation, offer or solicitation with respect to the purchase or sale of any security or other financial product, nor does it constitute professional advice. The information in this report has been obtained or derived from sources believed by Wells Fargo Securities to be reliable, but has not been independently verified by Wells Fargo Securities, may not be current, and Wells Fargo Securities has no obligation to provide any updates or changes. All price references and market forecasts are as of the date of the report or such earlier date as may be indicated for a particular price or forecast. The views and opinions expressed in this report are those of its named author(s) or, where no author is indicated, the Economics Group; such views and opinions are not necessarily those of Wells Fargo Securities and may differ from the views and opinions of other departments or divisions of Wells Fargo Securities and its affiliates. Wells Fargo Securities is not providing any financial, economic, legal, accounting, or tax advice or recommendations in this report. Neither Wells Fargo Securities nor any of its affiliates makes any representation or warranty, express or implied, as to the accuracy or completeness of the statements or any information contained in this report, and any liability therefore (including in respect of direct, indirect or consequential loss or damage) is expressly disclaimed. Wells Fargo Securities is a separate legal entity and distinct from affiliated banks, and is a wholly-owned subsidiary of Wells Fargo & Company.

You are permitted to store, display, analyze, modify, reformat, copy, duplicate and reproduce this report and the information contained within it for your own use and for no other purpose. Without the prior written consent of Wells Fargo Securities, no part of this report may be copied, duplicated or reproduced in any form by any other means. In addition, this report and its contents may not be redistributed or transmitted to any other party in whole or in part, directly or indirectly, including by means of any AI Technologies (defined below) through which this report or any portion thereof may be accessible by any third-party. "AI Technologies" means any deep learning, machine learning, and other artificial intelligence technologies, including without limitation any and all (a) proprietary algorithms, software, or systems that make use of or employ neural networks, statistical learning algorithms (such as linear and logistic regression, support vector machines, random forests or k-means clustering) or reinforcement learning, or curated data sets accessible by any of the foregoing or (b) proprietary embodied artificial intelligence and related hardware or equipment. In addition, certain text, images, graphics, screenshots and audio or video clips included in this report are protected by copyright law and owned by Wells Fargo Securities, its affiliates or one or more third parties (collectively, "Protected Content"). Protected Content is made available to clients by Wells Fargo under license or otherwise in accordance with applicable law. Any use or publication of Protected Content included in this report for purposes other than fair use requires permission from Wells Fargo Securities or, in the case of content attributed to any third party, the third-party copyright owner. You may not alter, obscure, or remove any copyright, trademark or any other notices attached to or contained within this report. All rights not expressly granted herein are reserved by Wells Fargo Securities or the third-party providers from whom Wells Fargo Securities has obtained the applicable information. © 2026 Wells Fargo Securities, LLC

Important Information for Non-U.S. Recipients

For recipients in the United Kingdom, this report is distributed by Wells Fargo Securities International Limited ("WFSIL"). WFSIL is a U.K. incorporated investment firm authorized and regulated by the Financial Conduct Authority ("FCA"). For the purposes of Section 21 of the UK Financial Services and Markets Act 2000 (the "Act"), the content of this report has been approved by WFSIL, an authorized person under the Act. WFSIL does not deal with retail clients as defined in the Directive 2014/65/EU ("MiFID2"). The FCA rules made under the Act for the protection of retail clients will therefore not apply, nor will the Financial Services Compensation Scheme be available. For recipients in the EFTA, this report is distributed by WFSIL. For recipients in the EU, it is distributed by Wells Fargo Securities Europe S.A. ("WFSE"). WFSE is a French incorporated investment firm authorized and regulated by the Autorité de contrôle prudentiel et de résolution and the Autorité des marchés financiers. WFSE does not deal with retail clients as defined in MiFID2. This report is not intended for, and should not be relied upon by, retail clients.
