MACQUARIE

Nan Ya Plastics

Outperform

Mix upgrade accelerating

Key Points

- NPC reported Sep revenue up 55% YoY while net profit surged over 9x YoY to TWD35.1bn, with Sep DPS above 2Q26 DPS.
- We expect a rising high-end product contribution to accelerate Low Dk/ Low CTE glass fibre sales next year.
- Our industry checks suggest that CCL supply will remain tight due to glass fibre shortages.

- **Upside to our 4Q26 forecast.** NPC reported strong Sep earnings following a required disclosure on unusual share-price movements. Revenue rose 55% YoY to TWD34.4bn, while net profit surged over 9x to TWD35.1bn. Sep EPS reached TWD4.42, above 2Q26 quarterly EPS of TWD3.37. Mgmt attributed the strength mainly to electronic materials, including high-end CCL benefiting from AI demand. We estimate Sept EBIT at TWD8-9bn, ~45% of 3Q26 EBIT, implying upside to our TWD20.3bn 4Q EBIT estimate.

- **Rising high-end CCL contribution in 2027/28.** The company refuted market rumours that its M9 material had failed customer validation, noting that advanced CCL expansion remains on track, with new capacity fully dedicated to high-end products. We expect stronger growth in Low Dk/Low CTE glass fibres, with high-end products reaching 40% of the mix vs 10% this year as CSP orders ramp up next year. We also expect M9 CCL to pass validation in 1H27.

- **Q-Cloth and PTFE not ready yet.** Our checks at Taiwan TPCA Show 2026 with glass fibre and CCL players suggest demand is multiple times industry capacity, with glass-fibre supply the key bottleneck given long capacity and weaving-machine ramp-up times. As producers shift capacity towards Low Dk/T-Cloth, E-Cloth supply should remain tight. Q-Cloth remains constrained by high costs and poor flexibility, while Low Dk glass fibre with HC Resin can deliver similar performance. PTFE is also unlikely to threaten glass fibre near term given its low mechanical strength.

Earnings changes: No changes.

Valuation: We maintain our NT$506.00 TP based on an unchanged 20x FY27E PER.

Catalysts: 2H26 high-end CCL ramp-up and capacity expansion, glass fibre capacity additions, and stronger equity-method earnings from 2027.

Investment Thesis and Recommendation

We expect high-end CCL qualifications, mix upgrades and utilisation gains to drive earnings growth, supported by recovering legacy businesses and higher associate earnings.

Key Risks to Investment Thesis

- Slower-than-expected AI data centre capex.
- Delays in, or failure of, high-end CCL qualification.
- Weaker-than-expected ASP and utilisation ramp.
- Normalisation of Middle East EG supply
- Earnings volatility at Nan Ya Technology and Formosa Petrochemical.

Company Description

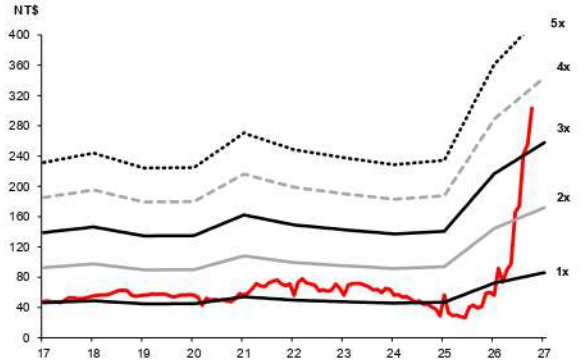

Nan Ya Plastics is a core member of the Formosa Plastics Group. The company operates four business lines, including plastics, chemicals, polyester, and electronic materials, across Taiwan, China, and the US. Nan Ya also holds equity-method stakes in Nan Ya Technology (2408 TT) and Formosa Petrochemical (6505 TT), and consolidates PCB exposure through Nan Ya PCB (8046 TT).

Key Quant Findings
The quant model currently holds a reasonably positive view on Nan Ya Plastics. The strongest style exposure is Price Momentum, indicating this stock has had strong medium to long term returns which often persist into the future. The weakest style exposure is Profitability, indicating this stock is not efficiently converting investments to earnings; proxied by ratios like ROE or ROA.

Macquarie Alpha Model: Key rankings

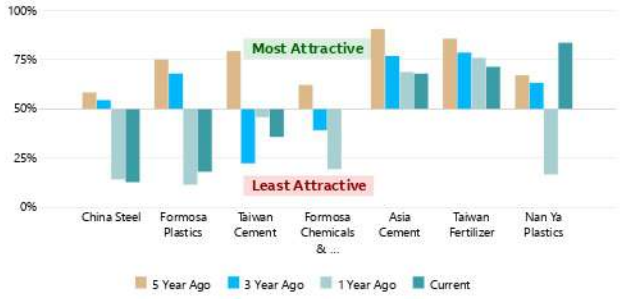

The Macquarie Quant's flagship Alpha model is a dynamic multi-factor model based on a staple of quant factors such as value, momentum, revisions, quality, and risk.

	Global	Market (Country)	Sector
	Whole Universe	Taiwan	Chemicals
Macquarie Alpha Model	**2699/18799**	**161/985**	**129/1034**
Fundamental (Consensus) *	**3759/18799**	**106/985**	**218/1034**

** based on Total Shareholder Return = Consensus Price target / Current Price*

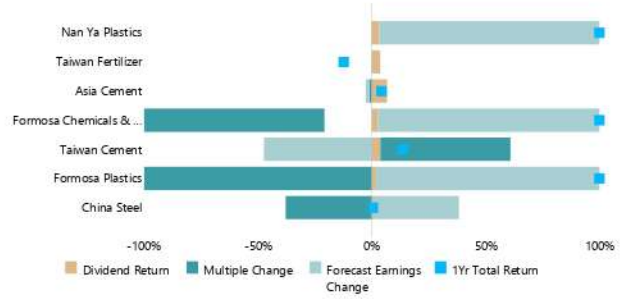

Current and Historical Alpha Model Rank

The chart shows the Macquarie Alpha model market ranking against the company's peers and over recent history.

Drivers of Stock Return

Breakdown of 1-year total return (local currency) into returns from dividends, changes in forward earnings estimates and the resulting change in earnings multiple.

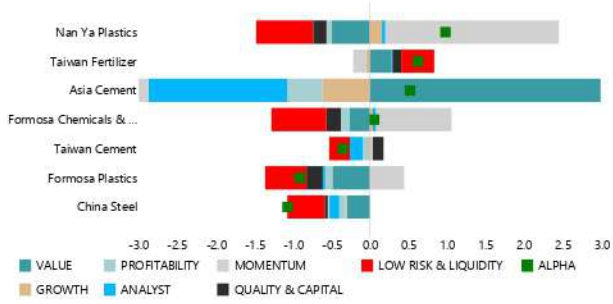

Alpha Model Decomposition

The Macquarie Alpha is decomposed into its sector and market relative factor & styles exposures (a higher/better percentile is coded in green, whilst lower in red).

Factors / Styles	Percentile relative to sectors (/1034)	Percentile relative to market (/985)	Core factors in definition
ALPHA	88%	84%	Built from the styles below
