eMemory Technology Inc | Asia Pacific

An overlooked quantum and IP play; Initiate at OW

We expect eMemory to benefit as PUF-PQC adoption appears set to accelerate, driven by NeoFuse adoption, PQC opportunities, and royalty growth.

Key Takeaways

- eMemory's royalty-driven IP model generates high-margin recurring revenue with strong earnings visibility.
- Advanced-node migration should drive NeoFuse adoption and royalty growth.
- PQC adoption could drive NeoPUF and create a second royalty engine.
- We initiate at Overweight with a NT\$3,330 price target and forecast a 25% EPS CAGR, 2025-28e.

eMemory is a leading embedded non-volatile memory (eNVM) and hardware security IP provider with a royalty-driven business model: The company generates high-margin recurring royalty revenue through its semiconductor IP portfolio. We believe eMemory is well positioned to benefit from advanced-node migration and the emerging post-quantum cryptography (PQC) opportunity ([see our report: Quantum Security – Building Defenses for Q-Day and Beyond](#)), supporting long-term royalty growth.

Well positioned for advanced-node migration, supporting broader NeoFuse OTP (one-time programmable memory) adoption: We believe continued migration toward advanced process technologies is likely to drive NeoFuse adoption. Higher wafer values at advanced nodes should further support royalty growth while creating future NeoPUF (physical unclonable function) opportunities.

Emerging PQC opportunity could create a second long-term royalty engine: As governments and enterprises transition toward quantum-safe security, hardware-based key protection is becoming increasingly important. We believe NeoPUF is well positioned as a hardware root-of-trust (RoT) solution and could become a meaningful growth driver alongside OTP.

Initiate at Overweight with a NT\$3,330 price target: Our valuation is based on a residual income model. We forecast a 25% EPS CAGR (2025-28E), driven by royalty growth, NeoFuse adoption, and security IP.

Key risks to our outlook include: 1) slower-than-expected adoption by key customers, 2) slower-than-expected PQC adoption, and 3) competition in the PUF-based PQC solution.

Investment Summary: An overlooked quantum and IP play

eMemory is a leading provider of embedded non-volatile memory (eNVM) and hardware security IP, with a business model differentiated by its high-margin, recurring royalty revenue stream. In our view, the market continues to primarily view eMemory as an OTP IP provider, with limited recognition of the company's potential exposure to emerging post-quantum security opportunities. We believe the company is well positioned to benefit from two structural trends: (1) continued migration toward advanced semiconductor nodes, which should support broader adoption of NeoFuse OTP solutions, and (2) the emergence of PQC, which could create a new long-term growth opportunity for NeoPUF. As governments and enterprises accelerate migration toward quantum-safe security architectures, we believe hardware-based key protection will become increasingly important. eMemory's NeoFuse-based PUF technology is well positioned to serve as a hardware root of trust for PQC-enabled systems. While PUF currently contributes only ~1% of the company's royalties, broader adoption could create a second long-term royalty engine alongside eMemory's traditional OTP business. In addition, we view NeoFuse as positioned to benefit from advanced-node migration, while potentially creating pull-through opportunities for future NeoPUF adoption. In our view, given eMemory's IP-centric business model, rising wafer values and increasing production volumes at advanced nodes should also support sustained royalty expansion over time.

NeoPUF may offer advantages in advanced-node scaling, low-power designs, and next-generation hardware root-of-trust applications...

Among today's hardware root-of-trust makers, Synopsys is currently the most direct competitor to eMemory. Following its March 2024 acquisition of Intrinsic ID, Synopsys' security platform is primarily based on SRAM PUF technology, which derives device-unique cryptographic keys from the start-up behavior of volatile SRAM cells. From a system design perspective, SRAM PUF solutions require dedicated SRAM resources and additional stabilization, helper-data, and error correcting code (ECC) circuitry to reconstruct stable keys across variations in temperature, voltage, and device aging.

Unlike SRAM PUF, which derives entropy from the power-up behavior of memory cells, NeoPUF generates its fingerprint from quantum tunneling characteristics created by randomly distributed oxide defects within the gate oxide. These defects are formed naturally during semiconductor manufacturing and produce an enormous number of possible device states, enabling each chip to generate a highly unique and statistically random silicon fingerprint with randomness approaching the theoretical ideal.

More importantly, NeoPUF's near-zero bit-error rate originates from the permanent nature of the underlying oxide defects and dangling bonds. Once these atomic-scale defects are formed during fabrication, they become highly stable physical structures. Reconstructing the original silicon-oxide bonding network would require temperatures exceeding approximately 700°C, far beyond any normal operating or qualification condition. As a result, the tunneling characteristics remain essentially unchanged throughout the lifetime of the device, allowing the same enrolled root key to be regenerated repeatedly with virtually identical responses years later.

Exhibit 8: NeoPUF vs. SRAM PUF

	Ideal PUF	NeoPUF*	SRAM PUF
Unit Cell			
Inter- Hamming Distance	50%	50%	~50%
Hamming Weight	0.5	0.5	0.59**
Bit Error Rate	0%	0%	5.5% w/o ECC***
Post-process	None	None	Stabilization, TMV, Masking and ECC Helper

Source: PUFsecurity

We believe eMemory's moat extends beyond NeoPUF itself. The company has spent years developing and validating its security IP portfolio, supported by a broad patent base and expertise accumulated through multiple technology generations. Given the mission-critical nature of hardware root-of-trust architectures, customers tend to prioritize proven reliability over adopting new security technologies, resulting in long qualification cycles and high switching costs.

OTP Business Benefits from Advanced-Node Migration and Rising Wafer Values

As semiconductor production continues to migrate toward advanced process nodes, OTP benefits from increasing eMemory's penetration as conventional eFuse solutions face growing scaling challenges at smaller geometries. At the same time, royalties account for the majority of eMemory's earnings and are closely tied to customer production. As manufacturing shifts toward leading-edge nodes, higher wafer values translate into higher royalty revenue per design win. In addition, customers upgrading their security architecture at advanced nodes are increasingly evaluating OTP and PUF solutions together, creating incremental cross-selling opportunities. Consequently, we believe that advanced-node migration should support both broader OTP deployment and sustained royalty growth over the long term.

Exhibit 9: eMemory's OTP royalties from main foundries

Source: Company data, Morgan Stanley Research.

Investment Thesis

Recent correction creates an attractive entry point: We believe the recent share price correction was triggered by 1Q26 earnings miss and concerns over near-term OTP royalty growth. However, we view part of the weakness as timing-related, as 1Q26 royalties had yet to reflect recent foundry price increases that management expects to benefit results in 2H26. More importantly, investor attention remains almost entirely focused on the core OTP business, while assigning little value to NeoPUF and eMemory's positioning within the emerging post-quantum security ecosystem.

The market is overlooking eMemory's long-standing PUF investment: We believe investors continue to view eMemory primarily as an OTP IP company, overlooking its multi-year investment in PUF technology. Unlike many companies that only recently began positioning around post-quantum security, eMemory has been developing NeoPUF for years and has already secured commercial deployments that contribute revenue today.

Attractive valuation relative to both security and semiconductor IP peers: We believe eMemory should be assessed through both the quantum security and semiconductor IP peer groups given its exposure to hardware security and royalty-driven IP licensing. Relative to quantum security peers, eMemory stands out as one of the few companies generating meaningful earnings and cash flow. Relative to semiconductor IP peers, its valuation does not appear demanding despite offering superior profitability, with above 50% ROE, well above most global IP peers. We therefore believe the company's valuation premium is supported by its earnings quality and business model.

Why we rate the shares OW: We see a differentiated combination of structural royalty growth, advanced-node migration exposure, and underappreciated post-quantum security optionality. While the market primarily values eMemory based on its established OTP franchise, we believe NeoPUF could emerge as a meaningful second growth engine as hardware root-of-trust adoption expands in the post-quantum era. As a result, we see the potential for both earnings growth and a gradual re-rating of the stock over time.

Investment Positives

1. PQC adoption could create a new long-term growth engine for PUF: As governments and enterprises accelerate the transition toward PQC, hardware-based key protection is becoming increasingly important. PUF is emerging as a critical hardware root-of-trust component, enabling secure generation and protection of large cryptographic keys required by PQC architectures. While PUF currently contributes only around 1% revenue for eMemory, we believe adoption could accelerate meaningfully over the next few years as security requirements evolve. More importantly, eMemory's IP business model benefits from strong customer stickiness. As a result, broader PUF adoption has the potential to become a structural growth driver rather than a one-off licensing opportunity, creating a second long-term royalty engine alongside OTP.

2. NeoFuse is positioned to benefit from advanced-node migration, while

creating additional pull-through opportunities for NeoPUF: As semiconductor geometries continue to shrink, conventional eFuse solutions face increasing scaling challenges related to area efficiency, reliability and process compatibility. NeoFuse offers an alternative OTP architecture that is designed to be more suitable for advanced nodes, particularly below 28nm, where customers have fewer commercially available options. We believe this creates a favorable competitive position for eMemory, allowing the company to expand OTP penetration as advanced-node adoption increases. In addition, OTP and PUF are becoming increasingly complementary rather than standalone solutions. As customers redesign their security architecture around next-generation OTP solutions, they are more likely to evaluate PUF at the same decision point, positioning eMemory to benefit from its integrated OTP and PUF portfolio. This creates a potential cross-selling opportunity, where broader NeoFuse deployment not only can expand OTP royalties but could also increase future PUF royalties. In our view, OTP migration may therefore also serve as an important catalyst for future PUF adoption.

3. Higher wafer values could drive sustained royalty expansion: Unlike many IP vendors that primarily rely on upfront licensing revenue, eMemory generates about 70% of its earnings from royalties tied to customer production. As semiconductor content continues to migrate toward more advanced process nodes, wafer costs have increased substantially versus mature-node production. Because royalty payments are generally linked to wafer utilization and production volume, rising wafer values can translate into higher royalty revenue per design win. This dynamic creates a favorable business model characteristic: once IP has been qualified and designed into a product, eMemory can continue to participate in customers' production growth with limited incremental operating costs. Therefore, continued migration toward advanced nodes and higher wafer ASPs could support long-term royalty growth and operating leverage.

Investment Concerns

1. Slower-than-expected adoption by key customers: Leading semiconductor companies tend to be more conservative when evaluating and deploying new memory and security architectures due to extensive validation and qualification requirements. Given the increasingly concentrated nature of semiconductor shipments, delayed adoption by a handful of major customers could slow eMemory's revenue penetration at foundries and postpone the ramp-up of royalty revenue.

2. Slower-than-expected PQC adoption: If enterprise, cloud, automotive, or government adoption of PQC progresses more slowly than expected, demand for PUF-based security solutions may take longer to materialize, delaying NeoPUF's revenue contribution and associated royalty growth.

3. Geopolitical and trade policy risks: Rising geopolitical risks could become an additional consideration in customers' technology sourcing decisions. This may affect the pace of design-win conversion and customer adoption, particularly

among global customers with increasingly diversified supply-chain strategies.

eMemory: Earnings Outlook

Revenue

We expect eMemory's revenue to grow at a 25.9% CAGR over 2025-28E, driven by rising OTP penetration in advanced semiconductor applications, continued ASP increases across its IP portfolio, and an expanding royalty base. We also expect growing adoption of advanced-node OTP solutions to support both licensing and recurring royalty revenue, while PUF-related products begin contributing meaningfully from 2027 onwards as hardware security requirements increase across AI, data center, automotive, and industrial applications. Looking further ahead, we see PUF and post-quantum security-related opportunities as emerging growth drivers for eMemory. While commercialization remains at an early stage, increasing demand for hardware root-of-trust architectures and secure device authentication should gradually expand the addressable market and support a higher contribution from security-related IP over time.

EPS

We expect eMemory's EPS to increase from NT\$25.99 in 2025 to NT\$53.31 in 2028, representing a 27% CAGR over 2025-28E. Earnings growth should be driven by continued revenue expansion, a growing mix of higher-margin royalty revenue, and the company's highly scalable licensing model. Given its asset-light business model and minimal cost of goods sold, we expect much of the incremental revenue to flow through to the bottom line, supporting sustained profitability and earnings growth.

How our estimates differ from consensus...

Our 2026-28E EPS estimates are below consensus. As eMemory remains relatively under-covered by the sell-side, consensus estimates are derived from a relatively small analyst base. While we remain positive on the company's long-term growth prospects, our forecasts assume a more gradual earnings trajectory over the forecast period, resulting in earnings estimates below current consensus expectations.

Risk Reward – eMemory Technology Inc (3529.TWO)

An overlooked quantum and IP play; Initiate at OW

PRICE TARGET NT\$3,330.00

We derive our price target from a residual income model. We assume an 8.6% cost of equity (2.0% risk-free rate, 6.0% equity risk premium, and 1.1 beta), a payout ratio of 90%, a medium-term earnings growth rate of 23.0%, and a terminal growth rate of 4.4%. Based on these assumptions, our RI model implies an equity value of NT\$249bn, or NT\$3,330 per share.

Consensus Price Target Distribution

RISK REWARD CHART

Key: — Historical Stock Performance ● Current Stock Price ◆ Price Target

Source: Refinitiv, Morgan Stanley Research

OVERWEIGHT THESIS

- PUF adoption could become a second royalty engine as PQC deployment drives demand for hardware root-of-trust solutions.
- NeoFuse should benefit from advanced-node migration while creating pull-through opportunities for NeoPUF adoption.
- Advanced-node adoption and rising wafer values support royalty growth through eMemory's production-linked royalty model.
- We rate the shares OW relative to our coverage because we see a differentiated and underappreciated growth profile, supported by royalty expansion, advanced-node migration, and emerging PQC adoption.

eMemory: Valuation methodology

Our price target is NT\$3,330: We derive our price target from a residual income model, as we believe this methodology is best suited to capturing the long-term value of eMemory's high-margin IP and royalty business model. We assume an 8.6% cost of equity (2.0% risk-free rate, 6.0% equity risk premium, and 1.1 beta), a payout ratio of 90%, a medium-term earnings growth rate of 23.0%, and a terminal growth rate of 4.4%. Based on these assumptions, our RI model implies an equity value of NT\$249bn, or NT\$3,330 per share.

Our price target implies 80x 2027e P/E, above the company's historical average of 69x but below its +1SD valuation band of 97x. We believe this valuation is warranted by eMemory's leadership in embedded non-volatile memory and hardware security IP, long-duration royalty streams, and growing exposure to secular semiconductor security trends, including post-quantum cryptography and hardware root of trust.

We believe eMemory should be evaluated through both the quantum computing/security and semiconductor IP peer groups, given its exposure to both hardware security and semiconductor royalty-driven business models. Relative to quantum and security peers, eMemory appears attractive on a P/S basis while standing out as one of the few companies generating meaningful earnings and cash flow. Relative to semiconductor IP peers, we view Arm as the most relevant benchmark given the similarities in licensing and royalty business models. Compared with Arm, eMemory's valuation does not appear particularly demanding despite delivering significantly higher profitability. With a 2027E return on average equity (ROAE) of 61%, nearly double that of most global IP peers, we believe eMemory's valuation premium is justified by its superior earnings quality.

Scenario Analysis

Base case: We forecast revenue CAGR of 25.9% over 2025-28E, driven by rising OTP penetration in advanced semiconductor applications, continued ASP increases across its IP portfolio, and an expanding royalty base. Under these assumptions, we derive our base-case valuation of NT\$3,330/share.

Bull case: We forecast revenue CAGR of 42% over 2025-28E, supported by successful NeoPUF adoption among major hyperscale and semiconductor customers. We assume eMemory expands its penetration into datacenter and AI-related chips, while advanced-node OTP adoption and royalty growth exceed our base-case expectations. Under this scenario, we derive our bull-case valuation of NT\$4,555/share.

Bear case: We forecast revenue CAGR of 5% over 2025-28E, reflecting slower-than-expected OTP adoption at advanced nodes. We also assume alternative PUF technologies gain market traction, limiting NeoPUF penetration and resulting in weaker royalty growth. Under this scenario, we derive our bear-case valuation of NT\$1,865/share.

Company Background

eMemory Technology Inc., founded in 2000 and headquartered in Hsinchu, Taiwan, is a leading semiconductor IP provider specializing in eNVM and hardware security technologies. The company develops and licenses a broad portfolio of memory IP solutions, including OTP, MTP, flash, PUF, and emerging memory technologies, serving applications across AI, data centers, networking, automotive, industrial, and IoT markets. With more than 1,350 patents and technology support extending from mature nodes to advanced 2nm processes, eMemory has established itself as one of the world's leading memory IP vendors.

The company's core business is built on embedded memory IP solutions, including OTP, MTP, and flash technologies, which are widely used for code storage, device configuration, calibration, and security applications across a broad range of semiconductor devices. Leveraging its long-standing expertise in embedded memory technologies, eMemory has gradually expanded its product portfolio to include NeoPUF, NeoFuse, NeoEE, NeoMTP, NeoFlash, and other next-generation memory and security solutions. These products target growing demand for advanced semiconductor security, AI infrastructure, automotive electronics, and future PQC-enabled systems.

The company generated 67.5% of FY25 revenue from recurring royalty income and 32.5% from license fees, reflecting the scalability of its IP licensing business model.

Key Competitors

Globally, eMemory competes with a range of embedded non-volatile memory (eNVM) and hardware security IP providers. In the OTP and eNVM IP market, Synopsys (through its Kilopass acquisition) is generally considered one of the company's closest competitors, while broader semiconductor IP vendors such as Cadence also participate in selected overlapping markets. In security-related applications, competition comes from companies including Rambus, Secure-IC and Intrinsic ID, which offer hardware security, root-of-trust and PUF-based solutions. In Taiwan, companies such as Faraday and M31 have exposure to

selected memory and security IP markets, although their business focus differs from eMemory's core offerings. The market remains highly fragmented, with competitive dynamics varying across process technologies, end-applications and customer requirements, while foundry-provided memory solutions and internally developed IP at large semiconductor companies also represent important alternative offerings.

Key Suppliers and Customers

eMemory's customers primarily consist of leading global fabless semiconductor companies, IDMs and memory manufacturers across consumer, communications, data center and automotive markets. Revenue is generated through a combination of upfront licensing fees and recurring royalties. Customers first adopt eMemory's IP during the design stage and subsequently enter mass production through qualified foundries. Royalty revenue is then collected based on wafer shipments incorporating eMemory's IP, primarily from foundries such as TSMC and UMC.

Shareholding Structure

As of April 2026, eMemory's shareholder base was primarily composed of long-term institutional investors. The largest shareholder was Citibank Custody Singapore Government Investment Corporation (GIC), with a 6.23% stake, followed by Standard Chartered Custody for Smallcap World Fund, with 5.45%. Other major shareholders included Fubon Life Insurance (3.89%), the Labor Pension Fund (3.78%), and board member Chen Li-Chuan (2.97%). The top ten shareholders were predominantly global institutional investors and domestic financial institutions, reflecting a relatively diversified ownership structure with no single shareholder holding a controlling stake.

Important Regulatory Disclosures on Subject Companies

As of July 31, 2026, Morgan Stanley beneficially owned 1% or more of a class of common equity securities of the following companies covered in Morgan Stanley Research: ACM Research Inc, Advanced Micro-Fabrication Equipment Inc, Advanced Wireless Semiconductor Co, Alchip Technologies Ltd, AllRing Tech Co., AP Memory Technology Corp, ASE Technology Holding Co. Ltd., ASMPT Ltd, Aspeed Technology, Cambricon Technology Corporation, **eMemory Technology Inc**, GigaDevice Semiconductor Beijing Inc, GlobalWafers Co Ltd, Gudeng Precision, Hangzhou Silan Microelectronics Co. Ltd., Hua Hong Semiconductor Ltd, King Yuan Electronics Co Ltd, Macronix International Co Ltd, MediaTek, Montage Technology Co Ltd, NAURA Technology Group Co Ltd, Nuvoton Technology Corporation, Phison Electronics Corp, Powerchip Semiconductor Manufacturing Co, SG Micro Corp., Shanghai Fudan Microelectronics, Silergy Corp., Silicon Motion, StarPower Semiconductor Ltd, TSMC, UMC, Vanguard International Semiconductor, WIN Semiconductors Corp, Winbond Electronics Corp, WinWay Technology Co Ltd, WPG Holdings, WT Microelectronics Co. Ltd.

Within the last 12 months, Morgan Stanley managed or co-managed a public offering (or 144A offering) of securities of Alchip Technologies Ltd, Iluvatar CoreX Semiconductor Co., Ltd., Montage Technology Co Ltd, Powerchip Semiconductor Manufacturing Co.

Within the last 12 months, Morgan Stanley has received compensation for investment banking services from ASMPT Ltd, Iluvatar CoreX Semiconductor Co., Ltd., Montage Technology Co Ltd, Powerchip Semiconductor Manufacturing Co, Silicon Motion.

In the next 3 months, Morgan Stanley expects to receive or intends to seek compensation for investment banking services from Advanced Micro-Fabrication Equipment Inc, Alchip Technologies Ltd, AP Memory Technology Corp, ASE Technology Holding Co. Ltd., ASMedia Technology Inc, ASMPT Ltd, Aspeed Technology, Espressif Systems, GigaDevice Semiconductor Beijing Inc, GlobalWafers Co Ltd, Gudeng Precision, Himax Technologies Inc, Hua Hong Semiconductor Ltd, Iluvatar CoreX Semiconductor Co., Ltd., Innoscience, King Yuan Electronics Co Ltd, Macronix International Co Ltd, MediaTek, MetaX Integrated Circuits, Montage Technology Co Ltd, Novatek, Phison Electronics Corp, Powerchip Semiconductor Manufacturing Co, Realtek Semiconductor, SG Micro Corp., Shenzhen Longsys Electronics Co Ltd, SICC Co Ltd, Silergy Corp., Silicon Motion, TSMC, UMC, Universal Scientific Ind. (Shanghai), Vanguard International Semiconductor, Winbond Electronics Corp, WinWay Technology Co Ltd, WPG Holdings, WT Microelectronics Co. Ltd..

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from ASE Technology Holding Co. Ltd., King Yuan Electronics Co Ltd, MediaTek, Nanya Technology Corp., Novatek, Nuvoton Technology Corporation, Realtek Semiconductor, Silicon Motion, SMIC, TSMC, UMC, Universal Scientific Ind. (Shanghai), Winbond Electronics Corp, WT Microelectronics Co. Ltd..

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: Advanced Micro-Fabrication Equipment Inc, Alchip Technologies Ltd, AP Memory Technology Corp, ASE Technology Holding Co. Ltd., ASMedia Technology Inc, ASMPT Ltd, Aspeed Technology, Espressif Systems, GigaDevice Semiconductor Beijing Inc, GlobalWafers Co Ltd, Gudeng Precision, Himax Technologies Inc, Hua Hong Semiconductor Ltd, Iluvatar CoreX Semiconductor Co., Ltd., Innoscience, King Yuan Electronics Co Ltd, Macronix International Co Ltd, MediaTek, MetaX Integrated Circuits, Montage Technology Co Ltd, Novatek, Phison Electronics Corp, Powerchip Semiconductor Manufacturing Co, Realtek Semiconductor, SG Micro Corp., Shenzhen Longsys Electronics Co Ltd, SICC Co Ltd, Silergy Corp., Silicon Motion, TSMC, UMC, Universal Scientific Ind. (Shanghai), Vanguard International Semiconductor, Winbond Electronics Corp, WinWay Technology Co Ltd, WPG Holdings, WT Microelectronics Co. Ltd..

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: ASE Technology Holding Co. Ltd., Iluvatar CoreX Semiconductor Co., Ltd., King Yuan Electronics Co Ltd, MediaTek, Montage Technology Co Ltd, Nanya Technology Corp., Novatek, Nuvoton Technology Corporation, Realtek Semiconductor, Silicon Motion, SMIC, TSMC, UMC, Universal Scientific Ind. (Shanghai), Winbond Electronics Corp, WT Microelectronics Co. Ltd..

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality

of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of July 31, 2026)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

Stock Rating Category	Coverage Universe		Investment Banking Clients (IBC)			Other Material Investment Services Clients (MISC)	
	Count	% of Total	Count	% of Total IBC	% of Rating Category	Count	% of Total Other MISC
Overweight/Buy	1529	42%	442	47%	29%	750	43%
Equal-weight/Hold	1582	43%	396	42%	25%	773	44%
Not-Rated/Hold	3	0%	1	0%	33%	1	0%
Underweight/Sell	560	15%	97	10%	17%	217	12%
Total	3,674		936			1741	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.

Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below. Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

Important Disclosures for Morgan Stanley Smith Barney LLC Customers

Important disclosures regarding any material conflict of interest that can reasonably be expected to have influenced Morgan Stanley Smith Barney LLC's choice of a third-party research provider or the subject company of a third-party research report, are available on the Morgan Stanley Wealth Management disclosure website at www.morganstanley.com/online/researchdisclosures. For Morgan Stanley specific disclosures, you may refer to <https://www.morganstanley.com/eqr/disclosures/webapp/generalresearch>.

Each Morgan Stanley research report is reviewed and approved on behalf of Morgan Stanley Smith Barney LLC. This review and approval is conducted by the same person who reviews the research report on behalf of Morgan Stanley. This could create a conflict of interest.

Other Important Disclosures

Morgan Stanley Research policy is to update research reports as and when the Research Analyst and Research Management deem appropriate, based on developments with the issuer, the sector, or the market that may have a material impact on the research views or opinions stated therein. In addition, certain Research publications are intended to be updated on a regular periodic basis (weekly/monthly/quarterly/annual) and will ordinarily be updated with that frequency, unless the Research Analyst and Research Management determine that a different publication schedule is appropriate based on current conditions.

Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley produces an equity research product called a "Tactical Idea." Views contained in a "Tactical Idea" on a particular stock may be contrary to the recommendations or views expressed in research on the same stock. This may be the result of differing time horizons, methodologies, market events, or other factors. For all research available on a particular stock, please contact your sales representative or go to Matrix at <http://www.morganstanley.com/matrix>.

Morgan Stanley Research is provided to our clients through our proprietary research portal on Matrix and also distributed electronically by Morgan Stanley to clients. Certain, but not all, Morgan Stanley Research products are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience. For access to all available Morgan Stanley Research, please contact your sales representative or go to Matrix at <http://www.morganstanley.com/matrix>.

Any access and/or use of Morgan Stanley Research is subject to Morgan Stanley's Terms of Use (<http://www.morganstanley.com/terms.html>). By accessing and/or using Morgan Stanley Research, you are indicating that you have read and agree to be bound by our Terms of Use (<http://www.morganstanley.com/terms.html>). In addition you consent to Morgan Stanley processing your personal data and using cookies in accordance with our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html), including for the purposes of setting your preferences and to collect readership data so that we can deliver better and more personalized service and products to you. To find out more information about how Morgan Stanley processes personal data, how we use cookies and how to reject cookies see our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html). Please use the provided link to review the Terms and Conditions and Most Important Terms and Conditions for Morgan Stanley India Company Private Limited (https://www.morganstanley.com/assets/pdfs/about-us-global-offices/india/Terms_and_conditions.pdf) and the following link to review the audit report (https://ny.matrix.ms.com/eqr/research/webapp/researchdocs/MSICPL_Morgan_Stanley_Research_Audit_Report.pdf).

If you do not agree to our Terms of Use and/or if you do not wish to provide your consent to Morgan Stanley processing your personal data or using cookies please do not access our research. Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.
