Aug 21 (Fri)		
Japan: CPI (Jul)	2.0% y/y	1.7% y/y

CENTRAL BANK MEETINGS

Bank Indonesia (BI) (19 August)

We expect Bank Indonesia to leave the BI rate at 5.75% in its August meeting. This meeting carries added significance as it will be chaired by acting Governor Destry Damayanti, after Perry Warjiyo resigned last month. President Prabowo has since nominated Deputy Governor Destry as the sole candidate for the position of the next Governor. If confirmed, the appointment will underscore the government's preference for a technocratic and market-oriented leadership transition, placing a seasoned BI official at the helm of the institution. The August rate review will provide a glimpse into the new leader's priorities and communication style.

July inflation had slowed to 2.9% yoy from 3.3% in June, while the 2Q growth was relatively resilient at 5.3%, with domestic drivers in the lead, especially investment, followed by consumption, while net trade was a drag. A firm 2Q growth report and stability in the rupiah makes the case for the BI to maintain its rates this month.

People Bank of China (PBOC) (20 August)

We expect the PBOC to keep the 1Y LPR unchanged next week, as resilient exports and stable industrial activity should continue to support growth momentum. Industrial production is expected to edge up from 5.3% yoy in June to 5.4% in July, supported by firm external demand. Exports stayed strong, rising 23.9% yoy in July, driven by the regional AI-electronics upcycle, while the hi-tech and equipment manufacturing sub-PMIs stayed in expansionary territory.

Domestic momentum, however, remains uneven. Retail sales growth is expected to moderate to 0.4% yoy in July, partly reflecting a high base from earlier trade-in subsidies. Household sentiment is weak amid uncertain job prospects, slower income growth and elevated precautionary savings, while subdued property prices continue to weigh on household wealth and consumption. Investment also stays weak, with fixed asset investment expected to contract further by 6.0% yoy ytd in July. Corporate investment is cautious amid the anti-involution campaign, while the property sector continues to be a major drag. Against this backdrop, policymakers are likely to maintain a measured policy stance, relying on targeted fiscal support to sustain growth rather than further rate cuts.

FORTHCOMING DATA RELEASES

Hong Kong SAR

Headline CPI is expected to remain at 2.0% yoy in July, with elevated energy prices offset by the subdued goods and food prices. Electricity fuel charges and petrol prices increased in July, adding to utilities and transport costs, while housing inflation should edge higher amid a firmer residential rental market. However, subdued durable goods and food prices, alongside a slowdown in mainland tourist arrivals from 10.4% yoy in June to 2.7% in July, should partly offset these upward pressures.

Japan

2Q GDP, July trade, and CPI data are forthcoming. GDP growth is expected to post an on-trend rate of 0.8% QoQ saar, albeit lower than the 1.8% recorded in 1Q. Growth is expected to be largely driven by domestic demand. Consumption indicators appeared to have strengthened in 2Q, supported by decent wage increases and energy subsidies aimed at containing inflation. In contrast, exports in real terms have yet to show a substantial recovery in 2Q.

July trade data are expected to show export value growth picking up further to 20% yoy. CPI inflation, meanwhile, is expected to rise to 2.0% yoy in July from 1.7% in June. These readings would be consistent with the preliminary trade data for the first 20 days of July and the Tokyo CPI data released earlier. Overall,

the data will likely strengthen the case for an early rate hike by the Bank of Japan at its September meeting. However, an actual move would still hinge on market dynamics, including USD/JPY movements and the outcome of the September FOMC meeting.

Malaysia

We expect Malaysia's goods exports to expand by a strong 40.0% yoy in July 2026, extending the robust 45.4% yoy growth in June. Exports performance should remain underpinned by strong artificial intelligence demand for electrical & electronics products, alongside resilient oil and gas shipments, supported by energy prices amid evolving tensions in Middle East. We see Malaysia's headline inflation holding at 1.9% yoy in July 2026, stable relative to June. Price pressures should remain in check, as higher fuel inflation and energy cost pass-through were mitigated by fiscal subsidies.

Singapore

We forecast Singapore's non-oil domestic exports to rise by 26.5% yoy in July. The expansion should continue to be led by electronics shipments, supported by robust AI-related demand for memory chips and server-related products. Non-electronics exports may have rebounded due to favourable base effects, although petrochemicals shipments remained weak due to disruptions in the Strait of Hormuz.

Taiwan

July export orders are expected to moderate slightly to 56.6% yoy, from 59.4% in June. Earlier-released export data showed growth decelerating to 32.9% in July, the lowest reading in five months. In real terms, export growth slowed more notably to 13.1%. This reinforces our view that AI-driven super growth has peaked and is transitioning toward more normal growth in 2H. We expect a similar trend to be reflected in export orders.

Thailand

We expect Thailand's real GDP growth to decelerate to 1.9% yoy in 2Q26 from a strong 2.8% yoy in 1Q26. This slowdown reflected softer private consumption and weaker foreign tourist arrivals, due to challenges arising from the conflict in the Middle East. Government spending and robust private investment provided support, alongside strong goods exports expansion driven by global artificial intelligence tailwinds. However, robust goods imports momentum likely resulted in a negative net trade contribution in 2Q26.

CENTRAL BANK MEETINGS

Monetary Authority of Singapore (MAS) (July 27)

We expect MAS to leave its SGD NEER policy unchanged at its July review next week, taking a pause after April's tightening. That decision to increase the SGD NEER policy band's slope puts policy in a good position to address the Iran war-related energy price increase. We see no urgency to follow up with a tightening, as Singapore's inflation remained low relative to the official inflation forecast range, and global oil prices have eased from their peak although with upside volatility. While the MAS will remain vigilant on upside price pressures, and leave the door open for further tightening, we expect it to maintain its 2026 inflation forecasts at 1.5-2.5%. The MAS will likely assess a larger positive output gap for 2026, but the capital-intensive nature of the economic expansion contains spillovers to domestic inflation, and the Middle East uncertainty still poses downside growth risks.

Bank of Japan (31 July)

The BOJ is expected to keep the policy rate unchanged at 1.00% after delivering a 25bp rate hike at its June meeting. Market attention will focus on the updated economic projections and Governor Ueda's press conference for further clues on the policy outlook.

At its April meeting, the BOJ revised down its FY2026 GDP growth forecast to 0.5% while raising its FY2026 core CPI forecast to 2.8%, reflecting heightened uncertainty stemming from Middle East tensions. The macroeconomic backdrop has since improved. Economic growth has held up better than expected, supported by stronger semiconductor exports driven by the AI boom and robust wage growth that continues to underpin private consumption. Inflation has also evolved more favorably than anticipated, aided by government measures such as energy subsidies and the release of petroleum reserves.

Governor Ueda is likely to signal further monetary policy normalization within this year, emphasizing the resilience of wage growth and underlying inflation momentum. Recent reports suggest that the BOJ may be open to raising rates at a faster pace than currently anticipated by markets, which are pricing in a roughly once-every-six-months pace. This raises the possibility that the next rate hike could come as early as October.

FORTHCOMING DATA RELEASES

Hong Kong

Exports growth is expected to remain robust at 46.8% yoy in June, supported by continued strength in external demand. China's export growth accelerated from 19.4% yoy in May to 27% in June, driven by easing geopolitical disruptions following the Middle East ceasefire and stronger demand for AI-related electronics. Import growth is also expected to stay firm, reflecting sustained demand for intermediate and capital goods in line with resilient export orders and a gradual improvement in investment sentiment.

Singapore

We expect Singapore's industrial production (IP) growth to remain robust in June 2026, albeit moderating to 10.2% yoy from 13.0% yoy in May. The electronics cluster likely remained the primary growth driver, supported by global artificial intelligence-related tailwinds, although supply constraints prevented output growth from keeping pace with strong demand. The precision engineering cluster was also likely supportive. However, performance across manufacturing clusters remained uneven, with chemical output continuing to decline due to ongoing feedstock disruptions stemming from the flare-up in Middle East tensions, alongside weak performance in the biomedical manufacturing cluster.

South Korea

July trade data are forthcoming. Based on preliminary data for the first 20 days of the month, export growth is expected to remain strong at 67%yoy, only slightly below 70.7% in June. Higher memory chip prices, together with robust AI-driven demand, should continue to be the key drivers.

The current semiconductor super-cycle is likely approaching its peak. According to the WSTS, global semiconductor sales are projected to increase by 89.9%yoy this year before moderating to 26.6% in 2027. Memory chips are expected to remain the most volatile segment, with sales surging 249.5% this year and slowing to 32.1% next year.

Taiwan

The preliminary estimate of 2Q GDP is due for release. Economic growth is expected to moderate to 10.3% yoy from the 1Q peak of 14.5%. Export growth, measured in real terms, slowed to 24.6% yoy in 2Q from 40.9% in 1Q, reflecting moderating ICT demand, particularly from the US. Services exports, proxied by inbound tourist arrivals, also softened during the quarter amid higher international airfares driven by Middle East tensions and elevated energy prices.

On the domestic side, private consumption appears to have strengthened, supported by positive wealth effects from the stock market, a stabilizing property market, and resilient labor market conditions.

Eurozone

Eurozone GDP growth numbers for the second quarter are likely to point to an improvement, owing to the pickup in the PMI surveys, a tight labour market, and pickup in few catalysts in the core countries, especially in Germany and France. This included better momentum in industrial activity, services and construction/ real estate in France, which lifted output out of contractionary terrain and into a mild expansion. Pullback in the July inflation numbers is likely to be short-lived. The ECB is expected act on rates in September owing to pipeline inflationary concerns following a re-escalation in the Middle East tensions.
